LIFE OF THE AUTHOR

PANDIT Gura Datta Vijaybhushan was a noted journalist of Rajya Darbar known as Pandit Gura Datta, who sacrificed his life in the defence of the country. He was a great scholar and a great writer. He was a great admirer of the Mahatmas of those days. His great grandfather was the then Minister of Bhawapur & Agent at the court of the Amir of Kabul. His father Late Ram Prasad was in the service of the British Educational Department. His mother was a very virtuous woman. He was their first child, being born on the 23rd of April 1881. He was called Mahantashikha. On being presented to the family priest, he was christened Vatsagi by him. When he was taken to Hardwar by his father, he assumed the name of Gura Datta from Pt. Goswami Kullialal. He himself added the word Vijaybhushan (upward for knowledge) to his name.

He was made to learn the alphabet at 5. When his father was at Dhule, he was sent to the District School there where he passed his Middle School Examination in the 11th year of his age. He made

an astonishing progress in Persian, having finished the famous poems of Moulana Rum, Shams Tabrez and Hafiz. Then he was sent to the High School at Multan. He was so brilliant in Euclid that he worked out all the deductions of the First Book of Potts' Euclid in one day.

He abhorred flesh food from early years and largely partook of milk and sweetmeat prepared from milk. His father induced him to take flesh, but he held out and his father had to yield. He was very fond of physical exercise and was strong for his age and size.

He was early inclined to religion. After reading the *Aina Mazahab Hinud*, he practised deep breathing or the controlment of breath. His study of Kanhya Lal Alakhdhari's works in Urdu put him on the path to atheism. At Multan, he went through the Bible in India, India in Greece, and Isis Unveiled.

He had an astonishing memory, being able to repeat long lists of unconnected names. He once exhibited his mnemonic performance at the request of Dr Leitner, Principal of Government College, Lahore. He studied Panini and the Arabic grammar. He used to recommend to his friends desuous of studying

Swami turned Mr. Ballantyne's very low & a
 Rector (Orator) Hetherington studied the
 Devised Sanskrit work. The study turned him
 and with him & he became a member of the Hindu
 Arya Samaj on the 20th of June 1887.

When he joined the Lahore College in 1881 his
 favorite studies were the works of Pindar, Pindar,
 John Stuart Mill, Pindar, Pindar & Jeremy Bentham.
 He was especially fond of Physical Science. He studied
 first in the F. A. Examination of 1881. While at
 College he organized a Debating Club where the
 discussions on religious & literary subjects were very
 attentively listened to by a great number. He also
 took part in editing a paper called the "Herald"
 of Arya Samaj. In October 1885 he went to Ajmer
 where Swami Dayanand Saraswati lay on his death
 bed, and was deeply impressed with the religious
 solemnity with which Swami departed from this
 world.

When a call was given to be formed in
 the memory of Swami Dayanand he was the first
 to subscribe Rs. 25 monthly stipend. He took
 delight in speaking at the anniversary of Arya
 Samaj. In his D. A. Examination he received

first He took Physics for his M A Examination and stood first in the Province Though engaged in college studies, he took an active part in the deliberations of the Arya Samaj committees for the proposed college and religious matters He was the only lecturer to appeal for funds for the college at almost all anniversaries of big Arya Samajes He accompanied a deputation to collect funds for the said college in the N W Provinces and Rajputana He delivered so many lectures that they would have filled a large volume, had they been written and published But his learning and thoughts can be sufficiently made out from this collect of his works

In 1887 he was temporarily appointed Professor of Physical Science on Mr Oman's going on furlough At the end of this year he lost his beloved father, but he bore the grief like an ascetic He was very fond of reading Andrew Jackson Davis' works He opened a private class to teach Panini, and had a large number of adult students He was at this time the sole light of Vedic religion in the Arya Samaj He was so unassuming and unobtrusive that he would not care to get his thoughts printed

As he was my great friend, I asked him to translate the Mandukyopanishat, which he did. A

my request he wrote a learned exposition of the
 Ishopasukhat and accepted my translation of it
 after correction from Mr Paris Gopal Ch. Sharma.
 He also came with me to get the article on the Termi-
 nology of the Vedas published in book form. He
 was asked by Lala Sahib Ram Bisla (now dead) and myself to start a Vedic Magazine
 to be printed by the Vrindavan Press which was
 started with the aid of Lala Jwala Kishore a very
 generous man of Panjab, to print the Vedas
 and other scriptures. He practiced yoga or in-
 tropection, taught a Sanskrit class, and conversed
 with his visitors who resorted to him every day.
 Many learned men, such as Swami Vivekanand
 Mahanand, Dr. Jyotirmoy Sen and V. K. Sarin
 This (1905) April 16th he was relieved of his duties
 as Physical Science Professor on the return of Prof
 Oman to his job. He was offered a post of Extra
 Assistant Commissioner by the Government, but he
 declined in favor of teaching and preaching Vedic
 religion.

When thus employed in his pious work highly
 beneficial to the country he was taken ill. At first
 he refused to be treated by doctors and wanted to
 go to some secluded place to cure himself; but he

was obliged to yield to the advice of his numerous friends, who put him under the treatment of several famous doctors both native and European. His disease was phthisis. He persistently refused to take meat when prescribed by the doctors. At last, he expired at 7 a.m. on the 19th of March, 1890, at the age of 26 to the great grief of the Arya Samaj and the Indian people in general. The *Civil & Military Gazette* of Lahore thus noticed his death —

“Pandit Guru Datta Vidyarthi, M.A., who was for some time Professor of Science in the Government College, died at Lahore on the 19th instant. The deceased was a noted Sanscrit scholar and an ardent reformer. He was also a zealous member of the Arya Samaj, and, a short time ago, commenced publishing a series of Vedic Magazines which contained excellent commentaries on the Vedas. The deceased was highly respected by all communities and was believed to be the only Sanscrit scholar which the Panjab University has produced upto this time. His loss was greatly felt by the Native Community at large, and all public schools and colleges were closed on the day of his death. His funeral was attended by over 1000 men.”

He was short in stature and very fat in build. His constitution was made strong by physical exercise. He was an expert in gymnastics and in football. His eyes sparkled with intelligence. His smiling face cheered the heart of the listener. He walked lightly on his legs and his walk was graceful. His conversation was brilliant, instructive and humorous. He often spent hours in playing matches. His company was eagerly sought by students and learned and religious men.

In debates and in writing he was inclined to take a moderate part. His language in lectures was terse, precise, perspicacious and elegant. His speech was always the heart and admiration of the audience.

His food was vegetarian. He was fond of milk. He is said to have a great liking for taking the syrup of phosphorus.

He wore a simple dress of the English fashion. But his dress accessories were very amusing. He often put on warm clothes in summer and thin dress in winter.

Of his memory which was marvellous he himself said that if he went once through a book, he could never fail in an examination. His understanding a

difficult subject, he soon brought out an astonishing explanation. He had the patience & force of attention to read a book sometimes day & night without sleeping. He was so obliging that he would talk till very late at night with his friends & he went to his place. He was very generous. Several students dined with him for months and months. He assisted his friends with money without stint. Hence he could not save much from his salary as Professor. His frankness and sincerity were all well known to his friends. He was never heard to use harsh language even towards his menial servants. It was quite a luxury to hear him speak. His amiableness, his gentleness, and his sociableness captivated the heart of his companions & disarmed his opponents of their adverseness. He was a man of principles. He lectured on the beauties of Sanscrit learning & himself studied it with the ardor of a student, though he was so proficient in Sanscrit as to explain the works of Swami Shankara charya and other Vedant books with great facility and surprising scholarship. His good nature will never be forgotten by his friends. He left a widow and a son who are supported by the Arya Samaj in the Punjab — Durga Prasad

which, perhaps, is unavoidable, but with a view to take up, in a brief way, another and a more practical question involved therein, i.e., the question of the interpretation of Vedic terminology

Up to this time all the plans that have been adopted for the interpretation of Vedic terminology have been based on some preconceived notions. The philosophy of the subject requires that these preconceived notions should be carefully examined, studied and pruned of the extraneous matter liable to introduce error, whereas new and more rational methods should be sought after and interposed—methods such as may throw further light upon the subject

To examine, then, the various methods that have up to this time been pursued. Briefly speaking, they are three in number, and may, for want of better denomination, be called the Mythological, Antiquarian and Contemporary methods

Firstly, the Mythological method. This method interprets the Vedas as myths, as an embodiment of simple natural truths in the imaginative language of religious fiction, as a symbolic representation of the *actual* in the *ideal*, as an imbedding of primitive truth in the superincumbent strata of non-essential show and ceremony. Now, in so far as this concretion of thought in mythological network goes, it assumes a comparatively rude and simple stage of human life and experience. From this basis of a primitive savage state it gradually evolves the ideas of God and religion, which no sooner done than mythic period ends. It further argues thus—In the ruder stages of civilisation, when laws of nature are little

knows a very little and that is a very poor most important part in the performance of the functions of man. The light is not so original as it is commonly supposed to be. The most popular of the forces of nature especially known to us, is such a period of time long but a experience by motions usually. The world is the first range of motion of a first degree, and the second is usually a range. Now through out the range of enormous extension of motion of all precedes motion and, since even the most grotesque experience of a range is a small extension of knowledge, it is no great stretch of intellectual power to argue that these natural forces and to which the growth motions are due are endowed with the ability of mind. The personification of the forces of nature being thus effected, their deification was a flow. The overabundance of potency the unobtainable might and often the violence with which, in the sight of a savage these forces operate strike him with terror awe and reverence. A sense of his own weakness, humility and inferiority creeps over the savage mind and, what was into actually personified, becomes emotionally deified. According to this view the Vedic undoubtedly books of primitive times, consist of prayers from such an emotional character addressed to the forces of nature including wind and rain—prayers breathing passions of the savage or vengeance or for propitiation.

Whilst deductive psychology affords these data, whether or wrong as they may be, comparative philology and comparative mythology considerably support these views. A comparison of the mythologies of various

countries shows that the working of human intellect is analogous, that this process of mythification is not only everywhere universal, but coincident. The Scandinavian, Greek and Indian mythologies have no clear line of demarcation, save the accidental one of differentiation due to climatic effects. Comparative philology not only admits the universality and coincidence of these phenomena, but traces even phonetic identity in the linguistic garb with which these phenomena are clothed.

The evidence from these three sources—comparative philology, deductive psychology and comparative mythology—is indeed very great, and we have stated the nature of this method and the evidence upon which its validity depends at much greater length than the short space at our disposal could allow us, so that, for fairness' sake at least the value and merits of this method may not be underrated.

The results of comparative philology and comparative mythology need not be denied. They are the starting points in our discussion, the assumed axioms in the present subject. The *causus belli*, the debatable land, lies beyond them, in fact, below them. They are the facts—recognized matter of truth. How are they to be explained? And like explanations of all other things, here too, there may be alternative explanations, rival hypotheses, parallel theories to confront the same facts and phenomena. That mythologies of various countries are similar, may be explained as much on the hypothesis that laws of psychological development are every where the same, as on the hypothesis that they are all derived from a common parental system of mythology or religion. Phonetic similarities

apart from their doubtful and frequently whimsical character may analogically be traced to the operation of analogous organs and phonetic to a, or to a common parent language from which all the others are derived. Nor can these methods have any further aims to win the dispute between those who hold the reverse. As methods they can only discover mythic or phonetic similarity or affinities, but cannot explain them. Even if we leave out of consideration the all-maine character of the conclusions arrived at the explanations given, considered from the standpoint of inductive study a very low specific value. We seek the explanation not from a fact already known to exist—we do not tentatively assume a fact to have existed whilst we are at the same time assuming the validity of our conclusion. The supposed fact, from which the desired conclusion is sought, is not inferred from any independent evidence but is itself a link in the self-revolving series of concatenated facts. Further the growth of mythology is deductively inferred from some psychological data. It might as easily have been inferred as a degenerate, crippled, and then starved and gloated remnant of fuller and finer religion. An author has well spoken of the degeneracy of things (including doctrines pre-eminently) if left alone. Nor is this fact in any way an obscure one to the student of the history of church dogmas & opinions. Who does not know of religious practices, primarily designed to meet certain real wants, degenerating, after a lapse of time, on the cessation of those wants, into mere ceremonies and customs which are regarded not as accidents, but as essentials? Mythologies, as well as mythic practices, too, may arise either as products of human imagination

working under subdued intellect and petrified reason, or as an outgrowth of a distorted remnant of a purer and truer form of religion

There is not one hypothesis in connection with this subject that has not a counter hypothesis, not one theory whose claims are not met with by a rival theory. Independently of the vague character of these hypotheses—the philological and mythological ones—the uncertainty of the conclusions deduced from them cannot be lost sight of. Like the conclusions arrived at by Mr Pocock in his "India in Greece," wherein he traces the origin of all Greek geographical names to Sanskrit Indian names, and whereby he infers the colonization of Greece by the Indians, the conclusions arrived at according to the aforesaid hypothesis constitute one full chain of circular reasonings continually returning into themselves. Admitting the cognate relation that exists between the Greek and Sanskrit languages, it must follow that Greek names of localities must bear a remote and far-fetched (as contrasted with a direct and palpable) identity to Indian names of localities. The colonization of Greece by the Indians is not the just conclusion to be drawn from the specific topographical relations, which Mr Pocock has traced, independently of the common origin of Greek and Sanskrit languages. The identity of Greek and Sanskrit stock is a general formula which cannot be any further proved by such specific connections. The fact of the identity of several systems of mythologies and languages also leads to a distinct general proposition—the uniformity of human nature. Beyond the value of this general proposition, the specific mythological and philological facts have no independent value. Their value is subsumed

is its general proposition. The particular proposition is what is to be established, while of the general proposition which with it they go to form but which among them are not, is to take the truth of the general proposition. A common-sense opinion is held that many of a general order of nature or a group of law can be seen as real independent formal elements from the enumeration of particular instances of each order or law all similar to kind. All the remarks that have been made above may be considered to bear upon the question of comparative mythology in general, as having an indirect but influential influence on the terminology of the Veda. There is one other point, however, which comes directly into contact with the mythological theory as connected with the terminology of the Veda. Mythology as already remarked, is the symbolic action of human thought in the concrete. The contrast therefore of mythology with the abstract is the widest and the most thoroughgoing.

Philosophy as analysed by Herbert Spencer has for its object the elucidation of ultimate truths or laws. These truths in so far as ultimate must be the most general. The wider the group of individual facts that a law covers, or the greater the distance of the ultimate law from the minute details covering very limited and primary area the more abstract and the less concrete details expression become. Philosophy and mythology therefore stand contrasted—completely contrasted to one another in this respect. Philosophy is abstract, expressed in general terms and ultimate formulae; mythology is concrete expressed in gross material terms and representing primary objects and phases of objects. Nothing therefore is so completely subversive of the value of the mythological

method as the existence of philosophy and philosophic ideas in the Vedas. That the Vedas are books of philosophy and not of mythology, must not be admitted merely because a well-known professor and scholar of Sanskrit acknowledges that the germ of human thought and reason lies in the Vedas, whereas, according to him, its culmination lies in the philosophy of Kant, but on other and more trustworthy bases and authorities. The growth of philosophy in Sanskrit literature is earlier than the growth of mythology. The Upanishads and the Darśhanas, which are professedly books of philosophy and confessedly nearer to the Vedas, chronologically preceded, and not followed, the Puranas, the embodiment of mythological literature of India. It was philosophy that was evolved from the Vedas and not mythology. In the history of Indian literature, at least, it is not mythology that gives birth to philosophy, but philosophy that precedes mythology. How far mythology may rise as an out-growth and a distorted remnant of a purer and truer form of religion or philosophy, might perhaps now have been rendered more evident. Now the six schools of philosophy are, all of them, based on the Vedas, and support themselves by direct quotations from the Vedas. Not only then has philosophy been evolved from the Vedas, but substantially drawn out and evolved or developed subsequently. There is one, and only one objection, that can be raised against the above views. It is that the different portions of the Vedas belong to different epochs, for whilst some portions are mythological, others are decidedly philosophical. We would not here say what is already well known, that, however it may be, not one line of the Vedas is later than the Darśhanas or

the Upanishads are to speak of the Vedas. If however
 greatly wide apart may be the epochs occupied by the
 various portions of the Vedas, no more than of any local
 reasoning can make them coalesce with the Persian
 period. Independent of these considerations, of course
 important however is every argument of different epochs
 to the Vedas proves the insufficiency and partial character
 of the mythological method. The truth of the mythological
 system lies in the measure of the portions of the
 Vedas. It is not the fault of a whole that remains an
 allusion of this method, but in part. But what remains
 does not to isolate these portions or to put up the
 heterogeneous mass into two? But, if that that they
 belong to two distinct epochs. Now the assertion that
 the portions belong to two distinct epochs is itself
 grounded upon the insufficiency of the mythological
 method. If they could interpret the whole of the Vedas by
 the one mythological method, they could be no more of
 separating them. Thus they could not and therefore the
 isolation. The justification of the partial character of the
 mythological method depends upon the correctness of the
 alignment of the various epochs, such argument has no
 authority save the insufficiency of the mythological method.
 Thus, then, is the partial character of the mythological me-
 thod unconsciously regarded as self-evident. The first
 method then out of the three enumerated in the beginning
 of this subject considered independently proves its insufficiency
 considered in conjunction with philology later on better
 and lastly fails in contrast with the philosophic character
 of the Vedas. We will now consider the second method.

One of the most successful methods of unraveling an
 ancient literary record is the antiquarian or the historical

method It consists in approximating, in so far as possible, for the interpretation and explanation of the records in hand, to the books and general literature of the period to which it belongs. For the obvious reason that direct evidence is always to be preferred to second hand information, this method is next in value to none, but to the direct evidence of the senses. Now, in so far as in historical research, where the study of the past epoch is concerned, one has inevitably to fall for information on the literature and historical record of the period with which he is concerned; an examination of the conditions, which render such evidence valid and a labour on it no unfruitful task, is essential to establish the canons of historical research. The veracity of our knowledge of past events depends upon two factors, on this method, firstly on the faithfulness of the records we obtain of the event or events of the period, and secondly on the faithfulness of our interpretation of the records. We would forego an analysis of the first factor as this factor is amenable, for the estimation of its evidence, to laws which do not come within the compass of our subject. The interpretation of the records is what directly concerns us.

The excellence of historical or the antiquarian method lies in the fact that it renders our interpretation of past records less liable to error. And the reason may be thus explained. Language, like all other things that live or are of organised growth, is subject to constant variations, to variations depending partly on the laws of development of phonetic organs, partly on external circumstances of fusion and introduction of foreign languages, and partly on the laws of the evolution of human

through itself. Owing to this and many other causes all living languages readily undergo exchanges which occur, and pass after a sufficiently long interval to have created entirely different systems long ago. Any thing thought, or said, or written in a language is fitted with linguistic path therein requires for its correct interpretation that the laws which govern those linguistic variations and the variations of the sense of words should be carefully studied. Otherwise our interpretation would suffer from anachronism and error. To take a concrete example let us consider the case of the Roman Republic. In the time of the Roman Republic when printing was unknown newspapers unheard of locomotive engines and cars and other means that tend to facilitate the communication of indelible impressions of human thought or actions were thought of, and when Forum was the only place of resort for all audience and orator had a totally different meaning from that of modern times the Sena signified a different institution from what it now is; Republic or democracy of the people—the people then existing—was what would be to us now like oligarchy though very different from it in many essential features. Now a reader studying the literature of the period corresponding to the Roman Republic would find his information of that period incommensurate with facts if on account of his being unguided in his studies the words Democracy, Republic, and the like were to call forth before his mind what they now signify. Such a knowledge would be inconsistent with itself a medley of two epochs, and would be such as on critical examination would be termed sheer nonsense.

The applications of this method in the domain of history are, beyond doubt, various and most important. But not the less important are its applications in the fixing of the dates or the succession of periods, of the Puranas, the Darshanas, the Upanishads, Manu, the Ramayana, the Mahabharata, and so on. Various professors have fruitlessly tried to fix dates of these writings by searching in them, in most cases in vain, for any well established consistent historical facts. But far more important in the fixing of these dates, is the knowledge of historical evolution of Sanskrit literature. The Sanskrit of the Puranas is so different from the Sanskrit of the Mahabharata, and that of the Darshanas, which again is so different from that of the Upanishads, that a clear line of demarcation in each case is easily laid down. The one cannot be confounded with the other.

It is a matter of great surprise and wonder that in the case of the Vedas the method, whose merits are so evident and obvious, and which is so well recognised, in the domain of history, should not have been applied, or so loosely and carelessly applied, as to render modern interpretations of the Vedas by some very well-known professors of Sanskrit simply unintelligible and absurd.

In the case of the Vedas the learned professors of Sanskrit, whose versions of the Vedas are so extant have all derived their inspirations from the commentaries on the Vedas by Mahidhara, Ravana, and Sayana, writers of a period decidedly very much latter than that of the Vedas, and only well coinciding with our own time. These writers themselves were as much

ignorant of the terminology of the Vedas as we are. Their interpretations of Vedic terms, according to their meanings extant in their own times, were as wrong as would be those of words like democracy in our studies concerning ancient Rome. Ashwila and Sayana are in no way better than ourselves. It seems astonishing that in adopting the interpretations of the Vedas by Sayana and Ravana, our modern professors of Sanskrit should have forgotten the cardinal maxim that the nearer we approximate to the literature of the period to which the Vedas belong for their interpretation the greater would be our chances of the interpretation being more probable and more correct. According to the date assigned by these professors to the Vedas their interpretation of the Vedas would be based on the literature of a period so distant as to be alien to the time and spirit of the Vedas as to give rise to nothing but confusion and error.

To the view of any impartial reader who has studied the investigation of Goldstucker on this point, the whole fabric of dates crumbles to dust and the whole system of modern recognized chronology is easily upset. According to the best (and they are as a matter of fact the worst) authorities on the subject, no writings of date anterior to five or six thousand years before Christ seem to have existed. The whole world seems to have been circumscribed within 8,000 years. The whole region of the intellectual activity of man seems to have been focussed in the 6,000 years before Christ.

In spite of these views let us come directly to the subject of the Yajur. The Yajurveda and the Yajur

are confessedly books of much anterior date to the commentaries of Śaṅkara, Ravana and Mahidhara. We should rather resort to them and the Upanishads than to the times of the Purāṇas, of Ravana and of Mahidhara, for the interpretation of the Vedas.

The Upanishads inculcate monotheism. Where, in the the Upanishads or the Śrītapatha, do Indra, Mitra, and Varuna signify the deities and not the Deity? The Nirukta even lays down explicit rules on the terminology of the Vedas which are as yet quite unheeded by the modern professors.

The Niruktakāra in the very beginning of his book forcibly inculcates that the terms used in the Vedas are *Yaugīka* (possessing derived meaning) as contrasted with *Rūrikas* (terms having conventional, arbitrary or concrete meaning). We will on some future occasion quote a full length from the Nirukta, and render a better exposition of the doctrine. Here, however, we have simply said what the main assertion of the Nirukta is. This assertion is supported by the Mahābhāṣya and other older books on the subject, including the Sangraha.

If the main line pursued in discussing the question of the Terminology of the Vedas be correct, the conclusion we have arrived at leads to the following inquiry —

What is the opinion of ancient Vedic scholars on the subject? Are the authors of the Nirukta, the Nighantu the Mahābhāṣya, and the Sangraha, and other old, commentators at one with the modern commentators, i.e., Ravana, Śaṅkara, Mahidhara, and others who have of late followed the same line, or are they at variance with the modern writers? That, if they differ, reliance must be

placed upon old monuments. The preceding remarks would have made clear. Let us then examine the view of ancient writers on this subject.

Speaking broadly there three classes of words are met in the Sanskrit language the *ra gita* the *ra h* and the *ra k* words. A *ra gita* word is one that has a *derivative* meaning, that is, one that only signifies a *variety* of its root together with the modifications effected by the affixes. In fact the structural elements, out of which the word is compounded, afford the whole and the only clue to the true signification of the word. There being known, no other element is needed to complete a sense. Speaking in the language of modern logic the word is all *connotation*, and by virtue of its connotation determines as to its denotation. A *ra h* word is the name of a definite concrete object or even res to a definite concrete technical sense not by virtue of any of its connotations, but by virtue entirely of an arbitrary principle. In the case of a *ra k* word, we arrive at the name of an object by what may be called the process of generalization. We see, taste, touch, smell, and operate upon the object by the means of our senses and possessors of its estivating properties of sensible objects, we compare the sensible impressions it yields with sensible impressions already retained in our minds and consulting our past knowledge; we detect similarities between the two and thus get a *general* or a *generic* conception. To this generic conception we give an *appropriate* name by synthetically arriving at it from a *primitive* idea or ideas. The word, therefore thus ultimately formed, embodies the whole history of the intellectual activity of man

In the case of a *rurhi* word, the process is far different. We do not generalise. Nor is, therefore, any synthesis required there. We only roughly discriminate one object or class of objects from other objects, and *arbitrarily* place a phonetic *postmark*, as it were, upon it. An individual, to roughly discriminate him from others, is arbitrarily called John, another, Jones, so an object is arbitrarily denominated *Khatva*, another *Mala*, and so on. Here, we only discriminatively specify the object we are naming, without coming into general contact with it.

A third class of words, *yoga-rurhi*, is one in which two words are synthetically combined into a compound, denoting a third object by virtue of the combination of these two words. Such words express any relation, or interaction of phenomena. The *Kama'a* stands, for instance, in the relation of the *born* to *mud*, the *bearer*, hence *kamala* is denominated as *pankaja*, (*panka*, the mud, and *ja* signifying to bear).

Now the author of the Mahabhashya maintains that the Vedic terminology is all *jaugika*

Nama cha dhatujamaha Nirukte vyakarane shakatasya cha tokam"

"*Nasgama rurhi bhavam hi susadhu*"—Mahabhashya chap. III, sect. III, aph. 1 which means —

Etymologically speaking, there are three classes of words, the *jaugika*, the *rurhi* and the *yoga rurhi*. But the authors of the *niruktas*, Yaska and others, and Shakatayana, among the grammarians, believe all the words to be derived from *dhatu*s, that is, believe them to be *jaugikas* and *yoga-rurhis*, and *Panini* and others

believe them to be the same. The Mahabharata and the Manusmriti, and other ancient authors and commentators, without exception, regard Vedic terms to be genuine and genuine to be only; and the Mahabharata terms to be authentic.

The above is a clear and definite statement of the Mahabharata to the effect that the Vedic terms are all genuine. It is not difficult to prove by numerous and long quotations from the Mahabharata, Sangita and other older writings, that all of them agree as to the nature of the Vedic terms.

Without going into the details of this subject, it may be assumed that the Vedic writers of older epochs do not agree with those of modern times.

It is a strange thing to find our modern professors of Sanskrit, well versed philologists, and profound antiquarians so forcibly asserting the value of the "Antiquarian Method" and yet blundering at the very outset of this momentous question.

After the remarks we have made it is not surprising to find that our modern scholars should think of finding mythological data in the Vedas, or of having come across the facts of rude bronze age or golden age in that book of barbaric hymns.

THE TERMINOLOGY OF THE VEDAS AND EUROPEAN SCHOLARS.

With us, the question of the terminology of the Vedas is of the highest importance, for upon its decision will depend the verdict to be passed by the future world respecting the great controversy to rage between the East and the West, concerning the supremacy of the Vedic Philosophy. And even now, the determination of this question involves issues of great value. For, if the Vedic Philosophy be true, the interpretations of the Vedas, as given at present by Professor Max Muller and other European scholars must not only be regarded as imperfect, defective and incomplete, but as altogether false. Nay, in the light of true reason and sound scholarship, we are forced to admit their entire ignorance of the very rudiments of Vedic language and philosophy. We are not alone in the opinion we hold. Says Schopenhauer, "I add to this the impression, which the translations of Sanskrit works by European scholars, with very few exceptions, produce on my

* A paper of this name was submitted to the public by the writer early in 1888, but it was necessarily brief and incomplete. It has now been thought advisable to give to the same thoughts and principles a new garb, more suited to the requirements of the reading public of the present day, to amplify the same truths by interesting illustrations, and to supplement them by others that are necessary to complete the treatment of the subject.

mind. I cannot resist a certain suspicion that our Sanskrit scholars do not understand their text much better than the higher class of school boys their Greek or Latin. It will be well to not here the opinion of Fernal Dayanand Saranath, the most prominent scholar of Sanskrit of his age, on the subject. He says,—“The impression that the Germans are the best Sanskrit scholars and that no one has read so much of Sanskrit as Professor Max Müller is altogether founded. Yes, in a land where lofty trees never grow even a *casah* or the castor-oil plant may be called an oak. The study of Sanskrit being altogether out of question in Europe, the Germans and Professor Max Müller in there have come to be regarded as highest authorities. I came to learn from a letter of a principal of some German University that even men learned enough to interpret a Sanskrit letter are rare in Germany. I have also made it plain from the study of Max Müller's “History of Sanskrit Literature” and his comments on some mantras of the Veda that Professor Max Müller has been able only to scribble out something by the help of the so-called *śloka*, or paraphrases of the Vedas current in India. †

It is this want of Vedic scholarship among European scholars, this utter ignorance of Vedic language and philosophy that is the cause of so much misapprehension and prejudice even in our own country. We are indeed so often authoritatively told by our fellow brethren who have received the highest English education, but are themselves entirely ignorant of Sanskrit, that the

Vedas are books that teach idol-worship or element-worship, that they contain no philosophical, moral or scientific truths of any great consequence, unless they be the commonest truisms of the kitchen. It is therefore a matter of greatest concern to learn to attach proper value to the interpretations of these European scholars. We propose, to present a rough outline of those general principles, according to which Vedic terms should be interpreted, but which European scholars entirely ignore, and hence much of the misinterpretation that has grown up.

In the discussion of philosophical subjects, pre-conceived notions are the worst enemies to encounter. They not only prejudicially bias the mind, but also take away the truthfulness and honest integrity from the soul, which alone are compatible with the righteous pursuit and discernment of TRUTH. In the treatment of a question such as the estimation of the value of a system of philosophy or religion, extreme sobriety and impartiality of the mind, are required. Nor is it to be supposed that a religious or philosophical system can be at once mastered by a mere acquaintance with grammar and language. It is necessary that the mind should, by an adequate previous discipline, be raised to an exalted mental condition, before the recondite and invisible truths of Man and Nature can be comprehended by man. So is it with Vedic philosophy. One must be a complete master of the science of orthodoxy,^a the

^a These are the well known six Vedangas, 1 Shiksha, 2 Vyakarana, 3 Nirukta, 4 Kalpa, 5 Chhanda, and 6 Jyotish.

science of language, the science of etymology, the science of music, the science of poetry and the sciences of geometry and astronomy; he must be versed in the philosophy of dialectics, the philosophy of characteristics, the doctrines of logic or the science of evidence, the philosophy of eternal existence, the philosophy of yoga and the philosophy of *vidya* † he must be a master of all that and much more, before he can lay claims to a rational interpretation of the Vedas.

Such, then, should be our Vedic scholar—thoroughly adept in science and philosophy unprejudiced, impartial, judges and seekers after truth. But if impartiality be supplanted by prejudice, science and philosophy by quasi-knowledge and superstition, and integrity by malice, whereas predetermination takes the place of honest inquiry Truth is either disguised or altogether suppressed.

Speaking of the religion of the *Upanishads* and the Bible says Schopenhauer who has washed himself clean of all early-engrafted Jewish superstitions, and of all philosophy that cringes before these superstitions —

In India, our religion (Bible) will now and never strike root; the primitive wisdom of the human race will never be pushed aside by the events of Galilee, ‡ On the contrary Indian wisdom will flow back upon

† These are the well-known of Upanishads or Darshanas;—1. Purva Mimamsa, 2. Valakeshika, 3. Nyaya, 4. Bauddhya 5. Yoga, and 6. Vedanta.

‡ It is well-known how the astronomical and geographical discoveries of Galileo, and his telescope were forced upon the world in spite of the prisons and death racks of the so-called Christians—Ed.

Europe, and produce a thorough change in our knowing and thinking "

Let us now hear what Professor Max Muller has to say against the remarks of this unprejudiced, impartial philosopher. He says "Here again, the great philosopher seems to me to have allowed himself to be carried away too far by his enthusiasm for the less known. He is blind for the *dark side of the Upanishat*; and he wilfully shuts his eyes against the bright rays of eternal truths in the Gospel, which even Ram Mohan Roy was quick enough to perceive, behind the mist and clouds of tradition that gather so quickly round the sunrise of every religion "

With the view that the Christianity of Max Muller may be set forth more clearly before the reader, we will quote from the "History of Ancient Sanskrit Literature." Says Max Muller—

"But if India has no place in the political history of the world, it certainly has a right to claim its place in the intellectual history of mankind. The less, the Indian nation has taken part in the political struggles of the world, and expended its energies in the exploits of war and the formation of empire, the more it has fitted itself and concentrated all its powers for the fulfilment of the important mission reserved to it in the history of the East. History seems to teach that the whole human race required a gradual education before, in the fulness of time, it could be admitted to the truths of Christianity. All the fallacies of human reason had to be exhausted, before the light of a higher truth could meet with ready acceptance. The ancient religions of the world were but the milk of nature, which was in due time to be succeeded by

the bread of life. After the power of physical strength which was common to all members of the Aryan family, the hands of a wily priesthood, been charged with an empty idleness the Indian love of all the Aryan virtues, produced a new form of religion, which has well been called subjective, as opposed to the more objective worship of nature. That religion, the religion of Buddha, has spread far beyond the limits of the Aryan world, and to our limited vision, it may seem to have retarded the advent of Christianity among a large portion of the human race. But in the sight of Him with whom a thousand years are but as one day that religion, like all the ancient religions of the world may have but served to prepare the way of Christ, by helping through its very errors, to strengthen and to deepen the ineradicable yearning of the human heart after the truth of God. §

Is not this Christian prejudice? Nor is this Max Müller alone. Even more strongly does this remark hold good of Monier Williams, whose very object in writing the book, known as "Indian Wisdom," is to caricature the Vedic religion which he calls by the name of Brahminism, and to hoist up Christianity by the meritorious process of deliberate contrasts. Writes Monier Williams: "It is one of the aims, then, of the following pages to indicate the points of contact between Christianity and the three chief *foreign religions* of the world, as they are thus represented in India." †

§ Max Müller's History of Ancient Sanskrit Literature pp. 81-82.

† Monier Williams's Indian Wisdom, Introduction, p. 86.

Speaking of Christianity and its claims 'as supernaturally communicated by the Common Father of mankind for the good of all His creatures, he says—

"Christianity asserts that it effects its aim through nothing short of an entire change of the whole man, and a complete renovation of his nature. The means by which this renovation is effected may be described as a kind of *mutual transfer or substitution*, leading to a reciprocal interchange and co operation between God and man's nature acting upon each other. Man—the Bible affirms—was created in the image of God, but his nature became corrupt through a taint, derived from the fall of the first representative man and parent of the human race, which taint could only be removed by a vicarious death.

"Hence, the second representative man—Christ—whose nature was divine and taintless, voluntarily underwent a sinner's death, that the taint of the old corrupted nature transferred to him might die also. But this is not all. The great central truth of our religion lies not so much in the fact of Christ's death as in the fact of His *continued life* (Rom. viii. 34). The first fact is that He of His own free will died, but the second and more important fact is that He rose again and lives eternally, that He may bestow life for death and a participation in His own divine nature in place of the taint which He has removed.

"Thus, then, is the reciprocal exchange which marks Christianity and distinguishes it from all other religions—an exchange between the personal man descended from a corrupt parent, and the personal God made man and becoming our second parent. We are separated from a fallen root, and are grafted into a living one. We part

with the corrupt will, depraved moral sense and perverted judgment inherited from the first Adam, and draw recreative force—renewed wills, fresh insights of mind, righteousness, and knowledge—from the ever living divinity of the second Adam to which, by a simple act of faith, we are united. In this manner is the pre-salvage of Christianity effected. Other religions have their doctrines and precepts of morality which, if carefully detached from much that is bad and worthless, may well be with those of Christianity. But Christianity has, besides all these what other religions have not—a personal God, ever living to supply the free grace—regeneration by which human nature is created anew—made Godlike, and through which man, by regeneration, is heart, and still preserving his own self-consciousness, and personality is fitted to be a part of God the Father and dwell in His presence for ever.

Again, speaking of Brahmanism, he says—

"As to Brahmanism, we must, in fairness, admit that according to its more fully developed system, the union with God is held to be effected by faith is an apparently personal good, as well as by moral and by knowledge. And here some of the lines of Hinduism I thought were to intersect those of Christianity. But the apparent personality of the various Hindu gods melts away on closer scrutiny into a vague spiritual essence. It is true that God becomes man and interposes for the good of men causing a seeming combination of the human and divine—and an apparent stretch-ness of action and even loving sympathy between the Creator

and His creatures. But can there be any real interaction or co operation between divine and human personalities when all personal manifestations of the Supreme Being—gods as well as men—ultimately merge in the Oneness of the Infinite, and nothing remains permanently distinct from Him? It must be admitted that most remarkable language is used of Krishna (Vishnu), a supposed form of the Supreme, as the source of all life and energy (see pp 144-148, and see also pp 456, 457), but if identified with the One God he can only, according to the Hindu theory, be the source of life in the sense of giving out life to re-absorb it into himself. If, on the other hand, he is held to be only an incarnation or manifestation of the Supreme Being in human form, then by a cardinal dogma of Brahmanism, so far from being a channel of life, his own life must be derived from a higher source into which it must finally be merged, while his claim to divinity can only be due to his possessing less of individuality as distinct from God than inferior creatures.”†

And lastly in conclusion, he says—

“It is refreshing to turn from such unsatisfying systems, however interspersed with wise and even sublime sentiments, to the living energizing Christianity of European nations, however lamentably fallen from its true standard, or however disgraced by the inconsistencies and shortcomings of nominal adherents—possessors of its name and form without its power.”

“In conclusion, let me note one other point which of itself stamps our religion as the only system adapted to

† Ibid pp 44, 45

the requirements of the whole human race—the only message of salvation intended by God to be gradually pressed upon the acceptance of all His intelligent creatures.”—*Id* 4 p. 45.

It is clear then, that Professor Max Müller Williams is labouring under hard Christian prejudices, and can not be viewed in any way as an unprejudiced impartial student of the Vedas. No wonder then, if modern sophisticated philology prompted by the entire ignorance of the laws of interpretation of Vedic terms, and still by the prejudices of Christian superstitions, should raise its head against Vedic philosophy and gaze rudely upon European Christian nations or deluded educated natives of India who possess the high merit of being innocent, of any knowledge of Sanskrit language or literature.

But now to the subject. The first canon for the interpretation of Vedic terms, which is laid down by Yaska, the author of *Nirukta*, is that the Vedic terms are all *yauyika*. The fourth section of the first chapter of *Nirukta* opens with a discussion of this very subject. Yaska, Gargya, Bhakṣasayana and all other Grammarians and Etymologists unanimously maintain that Vedic terms are all *yauyika*. But Yaska and

A *yauyika* term is one that has a derivational meaning, that is, one that only signifies the meaning of root together with the modifications effected by the affixes. I fear, the structural elements out of which the word is compounded, affect the whole and the only key to the true signification is the word. The word is purely substantive

Śhaṅkara also maintain that *rurhi*† terms are also *yangika*, i.e., were originally framed from the roots, whereas, Gargya maintains that only *rurhi* terms are not *yangika*. The section concludes with a refutation of the opinions of Gargya, establishing it as true that, all terms whether Vedic or *rurhi* are *yangikas*. It is on this authority of the Nirukta that Patanjali quotes in his Mahabhashya the same opinion, and distinguishes the Vedic terms from *Rurhi* terms by the designation of *naigama*. Says Patanjali—

नाम च धातुजमाह निरुक्ते व्याकरणे

शकटस्य च तोकमु

and a line before this नैगम रुढिभव हि सुखाव †

The sense is, that all the *Rishis* and *Munis* ancient authors and commentators without exception, regard Vedic terms to be *yangika*, whereas *laukika* terms are regarded by some as *rurhi* also.

This principle, the European scholars have entirely ignored, and hence have flooded their interpretations of the Vedas with forged or borrowed tales of mythology, with stories and anecdotes of historic or pre-historic personages. Thus, according to Dr Muir, § the following historical personages are mentioned in

† A *rurhi* term is the name of a definite concrete object, with recognition of the word (as structurally determined) gives no clue to the object denoted by the word. Hence grammatically it means a word of arbitrary significance.

† Mahabhashya, Chap III, Sect, iii Aph

Mun. & Sanskrit Texts Vol III, pp 232-234

retains something of its radical meaning, every epithet tells, every thought, in spite of the most intricate and abrupt expressions, is, if we once disentangle it, true, correct, and complete"^a

Further again, says Max Muller,—“Names ..are to be found in the Veda as it were in a still fluid state. They never appear as *appellations* nor yet as *proper names*, they are organic, not yet broken or smoothed down”^a

Can there be anything clearer than this? The terms occurring in the Vedas are *jangla*, because “they never appear as appellatives, nor yet as proper names” and because “every word retains something of its radical meaning” It is strange to find that the self same Max Muller who has perceived the *jangia* character, of words in some mantras of the Vedas, should deny the same characteristic to other portions of the Vedas. Having said that words are *jangla* in these primitive strains, the Vedas, he proceeds to say,—“But this is not the case with all the poems of the Veda. It would be tedious to translate many specimens of what I consider the poetry of the secondary age, the Mantia period. These songs are generally intended for sacrificial purposes, they are loaded with technicalities, their imagery is sometimes more brilliant, but always less perspicuous, and many thoughts and expressions are clearly borrowed from earlier hymns”[†] This he calls the Mantra period. The primitive strains belong to what is called the

^a Max Muller's History of Ancient Sanskrit Literature, page 553

[†] Ibid, pp 755,
^{*} Max Muller's History of Ancient Sanskrit Literature, p. 558

Cikandas period. He describes the characteristics of the *Cikandas* period as distinguished from the *Manu* period, that has been already described, thus;—"There is no very deep wisdom in their teaching their laws are simple, their poetry shows no very high flights of fancy and their religion might be told in a few words. But what there is of their language poetry and religion has a charm which no other period of Indian literature possesses; it is spontaneous, original and truthful." Professor Max Müller quotes the *Rig Veda*, vi as specimen hymn of the *Cikandas* period. Says he—

This hymn, addressed to dawn, is a fair specimen of the original simple poetry of the *Veda*. It has no reference to any special sacrifice it contains no technical expressions, it can hardly be called a hymn in our sense of the word. It is simply a poem expressing without any efforts, without any display of far fetched thought or brilliant imagery the feelings of a man who has watched the approach of the dawn with mingled delight and awe, and who was moved to give utterance to what he felt, in measured language."

From these quotations, it will be clear that Professor Max Müller regards different portions of the *Vedas* belonging to different periods. There are some and earlier portions, (according to Max Müller's highly accurate calculations the very exactness and infallibility of which Goldstucker bears ample testimony to) which he calls as belonging to the *Cikandas* period. The word *Cikandas* in *Latika* Sanskrit means spontaneously

‡ Ibid, p 326.

Hence he regards Chhandas period to be the one, the hymns of which period only teach common things, are free from the flight of fancy and are the spontaneous utterances of a simple (orish) mind. The Mantra period (2900 years older) is full of technicalities and descriptions of elaborate ceremonies. Now we ask what proof has Max Müller given to prove that the different portions of the Vedas belong to different periods. His proofs are only two. Firstly, the ill conceived, confused idea of the difference between *Chandas* and *Mantra*, and secondly, the different phases of thought represented by the two portions.

We will consider each of these reasons in details. Says Yaska—

सच. मननात् छन्दासि छादन त् स्ताम. स्तवनात्
यजुयजते साम सनितमृचा ॥ निरु० ७। १२ ॥

which means that there is no difference in the meaning of mantra and chhandas. The Veda is called the mantra, as through it one learns the true knowledge of all existences. The Veda is also called the chhandas, as it removes all ignorance, and brings one under the protection of true knowledge and happiness. Or more explicitly still, we read in the *Śaṭapatha*, VIII 2—

छन्दासि व देवा वयोनावाश्छन्दाभिर्होदि सर्वं व्युन
नक्षम् ॥

The *mantras* (*deva*) are called *Chandas* for knowledge of all human conduct is bound up with them. It is through them that we learn all righteous conduct.

The Sanskrit word *Chandas* and its same cognate *Mantra* may be derived from the root *man* to think or *manas* to reveal the secret knowledge. From this derives the word *chandas* चण्डेरदियह & *Chanda* is derived from the root *chad* to delight or *Chandre*. *Chandas* is that the knowledge of which produces all delight as which illumines every thing. & reveals its true nature.

The second error of Mr. Muller for assigning different periods to different portions of the Ved is that there are two different phases of the *gita* discoverable in the Vedas. The one is the substantial and simple phase of thought and corresponds to his *Chanda* period. The other is the elaborate and technical phase of thought that corresponds to his *Mantra* period. But what proof has Max Muller to show that the hymns of his secondary period are full of elaborate and technical thought? Evidently this, that he interprets them thus. If his interpretations were proved to be wrong his distinction of the two periods will also fall to the ground. Now why does he interpret the hymns of the *mantra* period thus? Evidently because on the authority of *Syase* and *Mahadharma* he takes the words of those *mantras* to signify technicalities, sacrifices and ritual objects and ceremonies, or in other words, he takes these words not in their *jangla*, but in their *dis* sense. It is clear then that if Max Muller had kept in view the canon of interpretation given in *Nirukta* that all Vedic words are *jangla*, he would not have fallen into the fallacious

and chronism of assigning different periods to different parts of the Vedas

But there is another prejudice which is cherished by many scholars evidently under the impression of its being a well recognised scientific doctrine. It is that in the ruder stages of civilization when laws of nature are little known and but very little understood, when mankind has not enough of the experience of the world, strict methods of correct reasoning are very seldom observed. On the other hand, analogy plays a most important part in the performance of intellectual functions of man.

The slightest semblance, or, usage of semblance, is enough to justify the exercise of analogy. The most palpable of the forces of nature impress the human mind in such a period of rude beginnings of human experience by motions mainly. The wind blowing, the fire burning, a stone falling, or a fruit dropping, affects the senses essentially as moving. Now, throughout the range of conscious exertion of muscular power, *will* precedes motion, and, since even the most grotesque experience of a savage in this world assumes this knowledge, it is no great stretch of intellectual power to argue that these natural forces also, to which the sensible motions are due, are endowed with the faculty of will. The personification of the forces of nature being thus effected their deification soon follows. The overwhelming potency, the unobstructible might, and often the violence, with which, in the sight of a savage, these forces operate, strike him with terror, awe and reverence. A sense of his own weakness, humility and inferiority creeps over the savage mind and, what was intellectually personified, becomes emotionally deified. According to this view, the Vedas

undoubtedly boxes of primitive as well as of prayers from such an emotional character addressed to the forces of nature including wind and rain—prayers breathing passions of the savage for vengeance or for propagation or in moments of poetic exaltation, hymns simply portraying the simple phenomena of nature in the personified language of mythology.

It is therefore not surprising that these scholars do believe that the Vedas as they have been of primitive times, are records of the mythological lore of the ancient Aryans.

And since, even according to the confessions of Max Müller higher truths of philosophy and monotheism are to be found here and there in the Veda it has become difficult to reconcile the mythological interpretations of the main part of the Veda with the philosophical portions. Says Max Müller "I add only one more hymn [Rig. X. 121], in which the idea of one God is expressed with such power and decision that it will make us hesitate before we deny to the Aryan nations an instinctive monotheism." It is therefore argued by some that the mythological portions are earlier than philosophical ones; for the primitive faith as already indicated is always mythology.

The fundamental error of this supposition lies in regarding a contingent conclusion as a necessary one; for although mythology may be the result of barbarous intellect and analogical reasoning it is not necessarily

a ways so It may even grow up as a degenerate, deformed and petrified remnant of a purer and truer religion The history of religious practices, primarily designed to meet certain real wants, degenerating, after a lapse of time, on the cessation of those wants, into mere ceremonies and customs, is an ample testimony of the truth of the above remarks Had the European scholars never come across the mythological commentaries of Sayana and Mahidhara, or the *Puranic* literature of post vedic (nay anti vedic) period, it would have been impossible for them, from the mere grounds of comparative mythology or Sanskrit philosophy, to alight on such interpretations of the Vedas as are at present current among them May it not be that the whole mythological fabric of the *Puranas*, later at they are, was raised long after the vitality of true Vedic philosophy had departed from their words in the sight of the ignorant pedants? Indeed, when one considers that the *Upanishats* inculcate that high philosophical monotheism, the parallel of which does not exist in the world—a monotheism, that can only be conceived after a full conviction in the uniformity of nature,—and that they together with the philosophical *Darshanas* all preceded the *Puranas* when one considers all this, one can hardly resist the conclusion that at least in India, mythology rose as a rotten remnant of the old philosophical living religion of the Vedas When through the ignorance of men, the *yaugika* meanings of the Vedic words were forgotten and proper names interpreted instead, there grew up a morbid mythology, the curse of modern idolatrous India That mythology may thus arise on account of the decay of the primitive meaning of old words, even Professor

Max Müller admits, when speaking of the evolution of truth into myth, that by a process, he says, that is not clear, it is possible to go on to say —

It is well known that ancient languages are particularly rich in synonyms, or to speak more correctly that in Latin the same objects called by many names — in fact, perhaps in the whole of the languages most objects have more names than in ancient Sanskrit — ancient Greek and Latin, a large choice of words for the same object. This perfectly natural. Each name could express one side only of whatever had to be named, and not satisfied with one partial name, the early framers of language produced one name after the other and after a time of and those which seemed most useful for special purposes. Thus the day might be called not only the bright, but the dark the covering the thundering, the rain-giving. This is the polymorphism of language, and it is what we are accustomed to call polytheism in religion &c. &c. (pp. 276 277)

Even, in the face of these facts, European scholars are so very reluctant to leave their preconceived notions that, as an example of the same influence Federico Pinotti writes to me from England

You are right in saying that the great commentators now so much admired, had very little if any better means of knowledge on Vedic terminology than we have at present. And you are certainly right in treating the

Puranas is very modern productions, but you are wrong in deducing India's mythological notions from such recent works. The Rig Veda itself, undoubtedly the oldest book which India possesses, abounds in mythological matter."

Does "you are certainly right" and "you are wrong" amount to any proof of the Vedas abounding in mythology. But further he says, "after the great shock which the spread of Buddhism gave to the old Indian form of faith, the Brahmans began to make their faith seriously philosophical in the Darshanas. Of course, many bold philosophical speculations are found in the Upanishats and even in the Samhitas, but it was at the time of the Darshanas that the religion was placed on a really philosophical basis."

Nothing shows so great a disrespect towards the history of another nation as the above. One is indeed wonder-struck at the way in which European scholars mistrust Indian chronology, and force their hypothetical guess-work and conjecture before the world as a sound historical statement of facts. Who, that has impartially studied the *Darshana* literature, does not know that the *Darshanas* existed centuries before even the first word of Buddhism was uttered in India? Jaimini, Vyasa and Patanjali had gone by, Gautama, Kanad and Kapila were buried in the folds of oblivion when Buddhism sprang up in the darkness of ignorance. Even the great Shankara, who, waged a manly war against Buddhism or Jainism, preached nearly 2200 years ago. Now this Shankara is a commentator on Vyasa Sutras, and was preceded by Gaudapada and

other Achaemenian work. Generally a upon general
 notion has passed away after the time of Xyæne when
 Enakra was born. Further there is no event certain
 in Indian history a Mahabharata, which took place
 about 400 years ago. The *Merula* is therefore stated
 at least 400 years ago. There is a strong objection
 against the admission of these facts by European
 scholars, and that objection is the Bible. For if
 these dates be true, who will become of the account
 of creation as given in the Bible. It seems, besides
 that European scholars, on the whole are unable to
 comprehend that there could be any disinterested
 literature in the past. It is easier for them to com-
 prehend that political or religious revolutions or
 controversies should give rise to new literature through
 necessity. It are the representations of Mr. Paoletti.
 The old Brahmins were a perambulating, dogmatic be-
 lievers in the revelations of the Veda. When Buddhism
 spread like wild fire they thought of shielding their
 religion by mighty arguments and hence produced the
De ala literature. This assumption so charmingly
 connects heterogeneous events together that although
 historically false, it is worth being believed in for
 the sake of its ingenious explanatory power.

To return to the subject. Yaska lays down a canon
 for the interpretation of Vedic terms. It is that the
 Vedic terms are *svayika*. Mahabharata repeats the
 same. We have seen how this law is set aside and
 ignored by the European scholars in the interpreta-
 tions of the Veda, -hence have arisen serious mistakes
 in their translations of the Veda. We have also seen

how Dr Muir falling in the same mistake interprets general terms as proper nouns, and how Max Muller, also led by the same error, wrongly divides the Vedas into two parts, the Chhandas and the Mantras. We have also seen how, due to the ignorance of the same law, Mantras upon Mantras have been interpreted as mythological in meaning, whereas some few Mantras could only be interpreted philosophically, thus giving rise to the question of reconciling philosophy with mythology. To further illustrate the importance of the proposition, that all Vedic terms are *yaugika*, I herewith subjoin the true translation of the 4th Mantra of the 50th Sukta of the Rig Veda, with my comment thereon and the translation of the same by Monier Williams for comparison. Surya, as a *yaugika* word, means both the sun and the Divinity. Monier Williams takes it to represent the sun only. Other terms will become explicit in the course of exposition. The Mantra runs as follows

तरणि विमृदर्शती व्योतिष्कृदसि सूर्य ।

विश्वमा भसि रोचन ॥

The subject is the gorgeous wonders of the solar and the electric worlds. "A grand problem is here propounded in this Mantra. Who is here that is not struck with the multiplicity of objects and appearances? Who that has not lost thought itself in contemplation of the infinite varieties that inhabit even our own planet? Even the varieties of plant life have not yet been counted. The number of animal and plant species together with

is essentially so, but because of an extraneous cause. Red and violet would appear equally black when placed in the dark. It is the magic of sunbeams which imparts to them this special influence, this chromatic beauty, this congenial coloration. In a lonely forest mid gloom and wilderness, a weary traveller who had betaken himself to the alluring shadow of a pompous tree, lay down to rest and there sunk in deep slumber. He awoke, and found himself enveloped in gloom and dismal darkness on all sides. No earthly object was visible on either side. A thick black firmament on high, so beclouded as to inspire with the conviction that the sun had never shone there, a heavy gloom on the right, a gloom on the left, a gloom before and a gloom behind. Thus labored the traveller under the ghastly, frightful wind-spell of frozen darkness. Immediately, the heat carrying rays of the sun struck upon the massive cloud, and as if by a magic touch, the frozen gloom began to melt, a heavy shower of rain fell down. It cleared the atmosphere of suspended dust particles, and in the twinkling of an eye fled the moisture laden sheet of darkness resigning its realm to awakened vision entire. The traveller turned his eyes in ecstatic wonder from one direction to the other, and beheld a dirty gutter flowing there, a crystalline pond reposing here, a green glass meadow more beautiful than violet plant on one side, and a cluster of variegated fragrant flowers on the other. The feathery creation with peacock's train, and deer with slender legs, and chirrup of birds with plumage lent from Heaven, all, in fact all, darted into vision.

Was there magic between the sun and planet? Had
 ends of great earth and heaven? Great sea, and land
 with the music of birds, all grown as a movement? Was
 lay the tyrannic was not? Where the is a canopy
 where the fragrant flower? Had they been transported
 there by some magical power in the the king of an
 are from dark and distant regions of chaos? Yet they
 did not spring up in a moment. They were already
 there. Had the gods had not shed their life on
 them. It required the magic of the universe to achieve
 before scenes of agony in beauty and dark into sun
 It required the two great rays of the resplendent sun to
 shed their life on the earth. The earth could not be

 setting the Sun that cannot be parted and the solar
 web of **अग्निमिच्छते** the Sun that evolves the
 panoramas of this grand creation **विष्णुदग्ध** the eter-
 nal Sun ever shining through eternity in perpetual
 action for the good of all. // about the rays of His
 windows all around; the deeply thirsty and parched
 plant-dried atoms of matter drank in His radiation from
 the ever flowing, ever gushing ever illuminating rays of
 His wisdom their appropriate elements and essence,
 of phenomenal existence and panoramic display. Thus
 the life was sustained. One central sun producing
 life of colour. One central Divinity producing

infinity of worlds and objects Compare with this Monier William's translation

"With speed beyond the ken of mortals, thou, O sun,
Dost ever travel on, conspicuous to all
Thou dost create the light, and with it illumine
The entire universe"

We have shown why we regard *Chhandas* and *Mantra* as synonymous We have also seen how Max Muller distinguishes between *Chhandas* and *Mantra*, regarding the latter as belonging to the secondary age, as loaded with technicalities, and as being less perspicuous than the former He points out its chief character to be that "these songs are generally intended for sacrificial purposes" Concerning this *Mantra* period, he says "One specimen may suffice, a hymn describing the sacrifice of the horse with the full detail of a superstitious ceremonial (Rig Veda i 162) "

We shall therefore quote the 162nd Sukta of Rig Veda, as it is the specimen hymn of Max Muller, with his translation, and show how, due to a defective knowledge of Vedic literature and to the rejection of the principle that Vedic terms are all *jangla*, Professor Max Muller translates a purely scientific hymn, distinguishable in no characteristics from the *Chhandas* of the Vedas, as representative of an artificial number one and highly superstitious ritual or ceremonial

To our thinking, Muller's interpretation is so very incongruous, unintelligible, and perfunctory, that were the interpretation even regarded as *fit* it could never be conceived as the description of an *actual* ceremonial And now to the hymn The first *Mantra* runs thus —

To take, for instance, the *mantra* quoted above Max Muller is evidently under 'the impression that Mitra is the 'god of the day,' Varuna, is the god of the 'investing sky,' Vayu or Ayu is the 'god of the wind,' Indra the 'god of the watery atmosphere,' Ribhus, 'the celestial artists,' and Maruts are the 'storm gods. But why these gods? Because he ignores the *jaugila* sense of these words and takes them as proper nouns. Literally speaking, *mitra* means a friend, *varuna*, a man of noble qualities, *aryama*, a judge or administrator of justice *ayik*, a learned man; *indra* a governor, *ribhuksha*, a wise man, *marutah*, those who practically observe the laws of seasons. The word *ashwa* which occurs in the *mantra* does not mean 'horse' only, but it also means the group of three forces, heat electricity and magnetism. It, in fact, means anything that can carry soon through a distance. Hence writes Swami Dayananda in the beginning of this Sukt

अथाश्वस्य विद्युद्रूपेण व्याप्तस्याग्नेश्च विद्यामह ॥

"This Sukt is an exposition of *ashwa vidya* which means the science of training horses & the science of heat which pervades every where in the shape of electricity." That *ashwa* means heat will be clear from the following quotations

अश्वं न त्वा वारवन्तं विदध्या अग्निं नमोभिः ॥

Rig Veda

The words *ashwam agnim* show that *ashwa* means *agni* heat. And further—

वृषो अग्निं समिधयतेऽश्वो न देववाहनः ।

त हविषन्त ईडते ॥ Rig Veda 1, 27, 1.

It should be noted that the above information is for informational purposes only and should not be used for any other purpose.

Professor Mac Millan remarks in the "Antiquities of the
man" as springing from the gods. This is a correct
for large nations and a little popular. I believe the
subsequent antiquities with the 1. I believe the
ed. reached to work by the end of the 19th century.
was as both to antiquities and to the 19th century. It is
Mac Millan's edition "The 19th century" and the 19th century
of power-general. The 19th century. The 19th century
and the 19th century.

We will describe the present general state of the energetic hypotheses advanced with reference to the nature of the various forms of life which entered or are entering the earth, and the probable processes of development (not necessarily in the same order) of the various forms of life, with which we are concerned, and the properties, with which we are concerned, with which we are concerned.

- May Mit a, Var s Aryama Ayw led s the bird
of Ribhus and the Maruts who but in the same way
proclaim as the s create the nature of the s all horse
sprung from the gods

We come now to the second river, which runs thus:

यन्निर्णिजारेक्णसा प्रावृतस्य

राति गृभीता मुखतो नयन्ति ।

सुपाडजा मेसरद्विशूरूप

इन्द्रापृष्णो प्रियमप्येति पाथ' ॥ २ ॥

Max Muller translates it thus—

‘When they lead before the horse, which is decked with pure gold ornaments, the offering, firmly grasped the spotted goat bleats while walking onwards, it goes the path beloved by Indra and Pushan’

Here again there is no sense in the passage. The bleating of the goat has no connection with the leading of the offering before the horse, nor any with its walking onward. Nor is the path of Indra and Pushan in any way defined. In fact, it is very clear that there is no definite specific relation between the first *mantra* and this, according to Muller's translation, unless a far fetched connection be forced by the imagination bent to discover or invent some curious, inconceivable mythology. And now to the application of the principle that all Vedic terms are *jongila*. Max Muller translates *teknasas* into gold ornaments, whereas it only means wealth (see *Aghantu*, II 10). *Rāti* which signifies the mere act of giving is converted into an ‘offering,’ *vishvarūpa* which only means one ‘having an idea of all forms’ is converted into ‘spotted,’ *aja* which means ‘a man once born in wisdom, being never born again’ is converted into a ‘goat’ *menyat*, from root *m* to injure is given to mean ‘bleating’ *suprang*, which means, from root *prach* to question, ‘one

who is able enough to put questions exactly is translated as walking onward; *paśyat* which only means drink or food, is translated into *path*; and lastly the red position instead of observing the general meaning and the strong are again made to signify two distinct with their proper names *Indra* and *Pashan*.² Considering the word *paśyat* written *Yaska*, *Th. 2* 11-1, 1, 2, 3.

पायोऽन्तरिक्षं । तदहमपि पाय उच्यते पानात् ।
पय मपि पाय उच्यते पानादेव ॥

Mathew correctly, which means 'they bring out of the organ of speech, or they explain or preach,' is translated by Max Müller into 'they lead before.'

It is thus clear that, in this *vet. sastrā* alone, there are many words that have been wrongly translated by Max Müller and all is due to this that the *paśyat* sense of the words has been ignored, the *ra* as or the *la* like sense being everywhere forced in the translation. The translation of the *sastrā* according to the sense of the words we have given, will be—

"They who preach that only wealth earned by righteous means should be appropriated and spent and those born in wisdom who are well versed in questioning others elegantly; the science of forms, and in the correcting the unwise, these and such alone drink the potion of strength and of power to govern."

The connection of this *sastrā* with the foregoing is that the *sastrā* only, spoken of in the first *sastrā* should be practised only by those who are possessed of righteous

means, are wise, and have the capacity to govern and control.

We come now to the 3rd *mantra* of 162nd *Sukhta* —

एष हागः पुरो षष्णु न वाजिनः
 पूष्णो भागो नीयते विश्वदेव्यः ।
 षमिप्रियं यत्पु रोडाशमर्वता
 त्वष्टदेन सीश्वसाय जनिति ॥ ३ ॥

Max Muller translates it thus —

"This goat, destined for all the gods, is led first with the quick horse, as Pushan's share, for Tvashtri himself raises to glory this pleasant offering which is brought with the horse."

Here, again, we find the same artificial stretch of imagination which is the characteristic of this translation. How can the goat be 'destined for all the gods,' and at the same time be 'Pushan's share' alone? Here Max Muller gives a reason for the goat being led first as Pushan's share, the reason is that Tvashtri himself raises to glory this pleasant offering. Now who is this Tvashtri and how is he related to Pushan? All these are questions left to be answered by the blank imagination of the reader. Such a translation can only do one service. It is that of making fools of the Vedic *rishis* whom Max Muller supposes to be authors of the Vedas.

The word *vishvadevyas*, which Max Muller translates as 'destined for all the gods,' can never grammatically mean so. The utmost that one can make for Max Muller on this word is that *vishvadeva* should mean 'for all the

does, but desired is a pure addition unwarranted by grammar. *Āśhradya* is formed from *āśhrada* by the addition of the suffix *val* in the sense of *śara* *śāśra* (see *Āśhradyajī*, IV 4 94). The meaning is

विगुणेषु दक्षेषु दिग्गुणेषु मायुर्विगुणेषु

or *Āśhradya* is whatever is far *val* extent it is produce useful properties. We have spoken of Max M. Net translating *śara* which means strength, *śāśra* a proper noun. *Takṣita* which simply means one who belittles things, or a skilful hand, is also converted into a proper noun. *Śaradaśa* which means food well cooked is translated into offering. The words which is brought with are, of course Max Muller's addition to put sense into what would otherwise be without any sense. *Ā* which, no doubt, sometimes means a base *hars* means knowledge. For if horse were intended, some adjective of significance would have to changed the meaning. See *śāśra* *śāśra* which means "obtains for purpose of good food, *śāśra*, in Vedic Sanskrit, meaning food or same) is translated by Max Muller into raises to glory. The true meaning would be. The goat possessed of useful properties yields milk as a strengthening food for horses. The best cereal is useful when made into pleasant food well prepared by an apt cook according to the modes dictated by specific knowledge of the properties of foods.

We have criticised Max Muller's translation of the first three *mantras* of this *śāśra* in detail, to show how he errs at every step; in every case the error consisting in taking the *śāśra* meaning instead of the *śāśra* one of the word

It will not difficult to pass from *mantra* to *mantra* till the hymn is finished, and show, that the true origin of all errors lies in not recognising the *yaugika* sense of Vedic terms. But we deem the above three *mantras* as sufficient. We, however, subjoin herewith Max-Muller's translation of the remaining *mantras* of this hymn, with our occasional remarks in the foot-notes.

Max Muller's translation —

4 When thrice at the proper seasons, men lead around the sacrificial horse which goes to the gods, Pushan's share comes first, the goat, which announces the sacrifice ° to the gods

5 Hotri adhvaryu, Aṭaya (Pratiprasthatri), Agnimindha (agnidhra), Gravagrabha (Gravastut), and the wise Sanstri (Prasastri), may you fill the streams (round the altar) with a sacrifice which is well prepared and well accomplished †

6 They who cut the sacrificial post, and they who carry it, they who make the ring for the past of the horse and even they who bring together what is cooked for the horse, may their work be with us

7 He came on—(my prayer has been well performed) the bright backed horse goes to the region of the gods

* The word *yaṇa* which originally indicates any action requiring association of men or objects, and productive of beneficial results, is always translated by European scholars as sacrifice. The notion of sacrifice is a purely Christian notion, and has no place in Vedic philosophy. It is foreign to the genuine religion of India. Hence all translations in which the word sacrifice occurs are to be rejected as fallacious.

† Max Muller herein puts five words as proper nouns and therefore does not accept their *yaugika* sense. The word 'round the altar' are supplied by Muller's imagination on the ground that sacrifices are conducted at the altar. Both ideas are foreign to Vedic philosophy, *1222*

12 They who examine the horse when it is roasted, they who say "it smells well, take it away," they who serve the distribution of the meat, may their work also be with us §

13 The ladle of the spot where the meat is cooked, and the vessels for sprinkling the juice, the vessels to keep off the heat, the covers of the vessels, the skewers, and the knives, they adorn the horse

14 Where he walks, where he sits, where he stirs, the foot fastening of the horse, what the drink is, & what food he eats, may all these which belong to thee, be with the gods!

15 May not the fire with smoky smell make thee hiss, may not the glowing cauldron swell and burst. The gods accept the horse if it is offered to them in due form

16 The cover which they stretch over the horse, and the golden ornaments, the head ropes of the horse, and the foot ropes, all these which are dear to the gods, they offer to them

17 If some one strike thee with the heel or the whip that thou mayst lie down, and thou art snorting with all thy might, then I purify all this with my prayer, as with a spoon of clarified butter at the sacrifice

18 The axe approaches the 34 ribs of the quick horse, beloved of gods. Do you wisely keep the limbs whole, find out each joint and strike. *

§ The translation of this mantra is especially noteworthy. The word *vajinam* from *vaja* cereals, is here taken as meaning horse, and Professor Max Müller is so anxious to bring forth the sense of the sacrifice of the horse that, not content with this, he interprets *manasa bhiksham upasate*, which means 'he serves the absence of meat' into 'he serves the meat'. Can there be anything more questionable?

* The number of ribs mentioned by Müller is worth being counted and verified. *Vankri* which means 'a zigzag motion' is here translated as 'rib'. This requires proof.

19 One will see the brilliant horse (and hold it, thus is the custom. Those of thy limbs which I have woven thy prepared, I sacrifice to the fire as bulls offered to the gods. †

20 May not thy dear soul leave thee, while thou art coming near may the see not stick to thy body May no greedy and unkindly murderer be doing with the sword, throw thy mangled limbs together

21 Indeed thou dost not thus, thou sufferest not; thou goest to the gods on easy paths.

The two horses of Indra, the two deer of the Maruts have been yoked, and the horse comes to the shaft of the *Asu* (of the twins). ‡

22 May this horse give us cattle and horses men property and all sustaining wealth. May *Aditi* keep us from sin, may the horse of this sacrifice give us strength."—pp. 353—354

We leave now Max Müller and his interpretations, and come to another commentator of the *Vedas*, Sayana. Sayana may truly be called the father of European Vedic scholarship. Sayana is the author from whose voluminous commentaries the Europeans have drunk in the deep

† *Trasā* (renewal) is here translated as brilliant horse so *śrā* was the noun and *trāsā* is qualifying adjective. The root *cr* is the truth. ‡ *Asu* is the noun signifying electricity, and *śrā* is the qualifying adjective meaning all pervading. The words, all red in the gods, in the end of the translation are not addition of M & M 's to give the whole a mythological colour.

§ *Hari* is again as a root it would translate into horse of Indra and *pramāṇa* into sword or of mare. The shaft of the *Asu* is perhaps the greatest curiosity Max Müller could present, as a sign of mythology.

wells of mythology. It is upon the interpretation of
 Madhava Sayana that the translations of Wilson, Benfey,
 and Llanglois are based. It is Sayana whose comment-
 aries are appealed to in all doubtful cases. "If a dwarf on
 the shoulders of a giant can see further than the giant,
 he is no less a dwarf in comparison with the giant." If
 modern exegetes and lexicographers standing at the top
 of Sayana, i. e., with their main knowledge of the Vedas
 borrowed from Sayana, should now exclaim, "Sayana
 intimates only that sense of the Vedas which was current
 in India some centuries ago, but comparative philology
 gives us that meaning which the poets themselves gave
 to their songs and phrases," or if they should exclaim
 that they have the great advantage of putting together
 ten or twenty passages for examining the sense of a word
 which occurs in them, which Sayana had not, nothing
 is to be wondered at. Madhava Sayana, the voluminous
 commentator of 'all the Vedas,' of the most important
 Brahmanas and a Kalpa work, the renowned *Āśmanasī*,—
 'he, the great grammarian, who wrote the learned
 commentary on Sanskrit radicals—yes, he is still a model
 of learning and a colossal giant of memory, in compari-
 son to our modern philologists and scholars—Let
 modern scholars, therefore, always bear in mind, that
 Sayana is the life of their scholarship, their comparative
 philology and their so much boasted interpretation of the
 Vedas. And if Sayana was himself diseased—whatsoever
 the value of the efforts of modern scholars—their com-
 parative philology, their new interpretations, and their
 so called marvellous achievements cannot but be diseased.
 Doubt not that the vitality of modern comparative philo-

logy and Vedic scholarship is wholly derived from the diseased and defective version of Sayana's learning. Sooner or later the disease will develop its full symptoms and sap the foundation of the very vitality it was used to produce. No branch of a tree can live or flourish when separated from the living stock. No interpretations of the Vedas will, in the end, ever succeed unless they are in accord with the living sense of the Vedas in the *Śruti* and the *Brahmanas*.

I quote here a *mantra* from *Rigveda*, and will show how Sayana's interpretation radically differs from the exposition of the *Śruti*. The *mantra* is from the *Rigveda*, ix. 44. It runs thus:—

मह्यया देवानां पदवीं कायेनाम
 अर्पिदमासी महिषो गृणाचाम् ।
 योनो यद्भानां अर्पित्वेभानां
 सोमं पवित्रमत्येति शमन् ॥

Says Sayana:—

God Himself appears as Brahma among the gods, Indra, Agni, &c; He appears as a poet among the dramatists and writers of lyrics; He appears as Vashistha, &c. among the Brahmanas; He appears as a buffalo among quadrupeds; He appears as an eagle among birds; He appears as an axe in the forest; He appears as the *śamsa* purified by *manas* as excelling in its power of purification the sacred waters of the Ganges, &c., &c."

The translation bears the stamp of the time when it was produced. It is the effort of a Jaidit to establish his

name by appealing to popular prejudice and feeling. Evidently, when Sayana wrote, the religion of India was "pantheism" or everything is God; evidently, superstition had so far increased that the waters of the Ganges were regarded as sacred, incarnations were believed in, the worship of Brahma, Vasishtha and other *rishes* was at its acme. It was probably the age of the dramatists and poets, Sayana was himself a resident of some city or town. He was not a villager. He was familiar with the axe as an instrument of the destruction of forests, &c, but not with the lightning or fire as a similar but more powerful agent. His translation does not mirror the sense of the Vedas but his own age. His interpretation of *brahma, kavi, dya rishi, vipra, malusha, mriga, shyena, gridhra, vana, soma, pavitra*—of all these words, without one exception, is purely *rurhi* or *laukika*.

Now follows the exposition of Yaska in his Nirukta, xiv 13. There is not a single word that is not taken in its *jangika* sense. Says Yaskar:

अथाध्यात् ब्रह्मादेवानामित्ययमपि ब्रह्मा भवति
 देवानां देवनकर्मणामिन्द्रियाणां देवोः कवोनामित्यपि
 पदं वेत्ति कवोना कवीयमानानामिन्द्रियाणां ऋषि-
 विप्राणामित्ययमप्यृषिणो भवति विप्राणा व्यापन-
 कर्मणामिन्द्रियाणां सहिषो ऋगाणामित्ययमपि

 ध्रावामिति श्येन आत्मा भवति श्यायते ज्ञानं कर्मणो

स्युपाचोन्द्रपाचि स्युधात चात कमचो पत पत
 विंमृहति अपितिवनामामित्युपमवि स्यव कर्म
 आभति धत्ते वनात् पतन कमचामिन्द्रिपाचो
 मोम पविचमत्येति मयमानो ऽ समवेतत सर्वमनु
 भवत्यातममतिमाचष्टे ।

We would now look at the spiritual sense of the sense as
 as Yashag said. It is the object to be plain that the human
 spirit is its central conscious being that enjoys the
 pleasure. The external world as created by the senses
 find its purpose and object and therefore absorption in
 this is not being. The sense of the sense is called
 the sense because it is the play in the external
 phenomenal world and because it is by them that the
 external world is revealed to us. Here the sense is the
 spirit and the sense is the sense of the sense and the
 presents to us the sense of the sense and the sense of
 the sense of the sense is called the sense because
 one learns by the sense. The sense of the sense is the
 sense of the sense of the sense being that understand
 the world of the sense. Further the sense is the
 sense of the sense of the sense of the sense of the sense
 the sense of the sense of the sense of the sense of the sense
 the sense of the sense of the sense of the sense of the sense
 the whole body. The sense of the sense of the sense of the sense
 for they hunt about their proper element in the external
 world. The sense of the sense of the sense of the sense of the sense
 the hunt is. The meaning is that it is really the sense of the
 power of the sense of the sense of the sense of the sense of the
 proper objects. The sense of the sense of the sense of the sense of the sense

the power of realization ; & *grīdhras* are the *indriyas*, for they provide, the material for such realization. The *Atma*, then, pervade these senses. Further, this *Atma* is *swadhītiṛ vānanam*, or the master, whom all *indriyas* serve. *Swadhīti* means *Atma*, for the activity of *Atma* is all for itself, man being an end unto himself. The senses are called *vāna*, for they serve their master, the human spirit. It is this *Atma* that being pure in its nature, enjoys all. Such, then, is the *yaugīka* sense which Yaska attaches to the *mantra*. Not only is it all consistent and intelligible unlike Sayana's, which conveys no actual sense, not only is each word clearly defined in its *yaugīka* meaning, in contradistinction with Sayana who knows no other sense of the word than the popular one, but there is also to be found that simplicity, naturalness and truthfulness of meaning, rendering it independent of all time and space, which contrasted with the artificiality, burdensomeness and localisation of Sayana's sense, can only proclaim Sayana's complete ignorance of the principles of Vedic interpretation.

This is Sayana, upon whose commentaries of the Vedas are based the translations of European scholars.

We leave now Max Muller and Sayana with their *surhi* translations and come to another question, which though remotely connected with the one just mentioned, is yet important enough to be separately treated. It is the question concerning the *Religion of the Vedas*. European scholars and idolatrous superstitious Hindus are of opinion that the Vedas inculcate the worship of innumerable gods and goddesses, *Devatas*. This word, *devatas*, is a most fruitful source of error, and it is very

necessary that his exact meaning and opinions should be determined. A misunderstanding of the sense of this word, *deva* has even occasioned the pope to superstitious interpretations of a legend in mythological poets and godfathers, as when the wretched Henry VIII. took his religion from the Vedas to be free of the worship of such material gods and have gone as far as to consecrate for the Vedas to degrade these gods even below pythons and to hope at par with such him. I shall let it be seen if the European scholars have been or not so ignorant as to endow this religion with a tale as true and that is *Heavenism*.

After classifying in a polytheistic, does not a monothestic, seems to M. & Muller. It would certainly be necessary to add some other elements to the *Heavenism* & the *African* *Heavenism* to ground it from polytheism because although they recognise the existence of various deities by names of deities, they represent each deity as independent of all the rest as the only deity present in the mind of the worshipper at the time of his worship and prayer. The character of every power is the result of its *Heavenism*. Although many gods are invoked in different hymns, sometimes also in the same hymn yet there is no rule of precedence established among them and according to the varying aspects of nature and the varying craving of human heart it is sometimes Indra the god of the blue sky sometimes Agni, the god of fire sometimes Varuna, the ancestor god of the firmament who are praised as supreme without any suspicion of rivalry or any idea of subordination. This peculiar phase of

religion, this worship of single gods, forms probably everywhere the first stage in the growth of polytheism, and deserves therefore a separate name **

To further illustrate the principles of this new religion, henotheism, says Max Muller, "When these individual gods are invoked, they are not conceived as limited by the power of others as superior or inferior in rank. Each God as to the mind of the supplicant is good as all the gods. He is felt, at the time, as a real divinity, as supreme and absolute, in spite of the necessary limitation which, to our mind a plurality of gods must entail on every single god. All the rest disappears for a moment from the vision of the poet, and he only who is to fulfill their desires stands in full light before the eyes of the worshippers. "Among you, O Gods, there is none that is small, none that is young, you are all great indeed," is a sentiment which, though perhaps, not so distinctly expressed as by Manu Vaivasvata, nevertheless, underlies all the poetry of the Veda. Although the gods are sometimes distinctly invoked as the great and the small, the young and the old (Rv 1 27-13), this is only an attempt to find out the most comprehensive expression for the divine powers, and nowhere is any of the gods represented as the slave of others."

As an illustration," when Agni, the lord of fire, is addressed by the poet, he is spoken of as the first god, not inferior even to Indra. While Agni is invoked, Indra

* Max Muller Lectures on the Science of Religion, London 1873, pp 141 142

is that forms the subject of exposition in the *mantra*, the term signifying that substance is called the *devatah* of that *mantra*. Take, for instance, the *mantra*—

अग्निं दूतं पुरोदधे हव्यवाहमुपब्रुवे । देवां २

आसादयादिह ॥ यज्ञः । २३ । १७ ॥

“I present to your consideration *agni* which is the fruitful source of worldly enjoyments, which is capable of working as though it were a messenger, and is endowed with the property of preparing all our foods. Hear ye, and do the same.”

Since it is *agni* that forms the subject-matter of this *mantra*, *agni* would be called the *devatah* of this *mantra*. Hence, says Yaska, a *mantra* is of that *devatah*, with the object of expressing *whose* properties, God, the Omniscient, revealed the *mantra*.

We find an analogous sense of the word *devata* in another part of the Nirukta. Says Yaska—

कर्म-सपत्तिर्मन्त्रो वेदे ॥ Nirukta, i 2.

“Whenever the process of an art is described, the *mantra* that completely describes that process is called the *devatah* (or the index) of that process.”

It is in this sense that *devatah* of a *mantra* is the index the essential key-note of the meaning of the *mantra*. There is in this analysis of the word no reference to any gods or goddesses, no mythology, no element worship, no henotheism. If this plain and simple meaning of *devata* were understood, no more will the *mantras* having *marut*

For their *devata* or *devi* for their *devata* be regarded as hymns addressed to the storm-gods or the god of fire; but it will be perceived that these *mantras* treat respect-fully of the properties of *manas* and of the properties of *fire*. It will then be regarded, as said elsewhere in the *Nirukta*,

देवो दामाहा दीपमाहा द्योतमाहा यदुक्तानो
भवतीति वा । *Nirukta*, vii. 15

That whatsoever is capable of conferring some advantage upon us, capable of illuminating things, or capable of explaining them to us, lastly the Light of all lights, these are the fit objects to be called *devatas*. This is not in any way inconsistent with what has gone before. For the *devata* of a *mantra* being the keynote of the sense of the *mantra* is a word capable of rendering an *explanation* of the *mantra*, and hence is called the *devata* of that *mantra*. Speaking of these *devatas* Yaska writes something which even goes to show that people of his time had not even the slightest notion of the gods & goddesses of Max Müller and superabundant *Illadus*—gods and goddesses that are now forced upon us under the vague designation *devata*. Says he

यस्मिन्नाचारी बहुकम् लोके देवदेवत्वमतिथि
देवस्य पितृदेवस्य । *Nirukta*, vii. 4.

We often find in common practice of the world at large, that learned men, parents, and *astiks*, (or those guest-misanthropes) who have no fixed residence but

wander about from place to place benefiting the world by their religious instruction), are regarded as *devatas* or called by the name of *devatas*. It is clear from the above quotation, that 'religious teachers, parents and learned men, these alone or the like were called *devatas* and no others in Yaska's time. Had Yaska known of any such idolatry or *devata* worship which superstitious Hindus are so fond of, and which Professor Max Müller is so intent to find in the Vedas or had any such worship prevailed in his time, even though he himself did not share in this worship, it is impossible that he should not have made any mention of it at all, especially when speaking of the common practice among men in general. There can be no doubt that element, worship and nature worship is not only foreign to the Vedas and the ages of Yaska and Panini and Vedic *rishis* and *munis*, but that idolatry and its parent mythology, at least in so far as *Aryavarta* is concerned, are the products of recent times.

To return to the subject, We have seen that Yaska regards the names of those substances whose properties are treated of in the *mantra* as the *devatas*. What substances, then, are the *devatas*? They are all that can form the subject of human knowledge. All human knowledge is limited by two conditions, *i.e.*, *time* & *space*. Our knowledge of causation is mainly that of succession of events. And succession is nothing but an *order in time*. Secondly, our knowledge must be a knowledge of something and that something must be somewhere. It must have a *locality* of its existence and occurrence.

Thus far the *enumeration* of our knowledge *is* and *is not*. Now to the *essentials* of his bridge. The most exhaustive division of human knowledge between objective and subjective knowledge (subject knowledge is the knowledge of all that goes on within the human body. It is the knowledge of the phenomena of the external nature, e.g. things & events have existed since the origin of the natural philosophy or philosophy of the material universe, reveals the presence of two things, matter and force. Matter as matter is not known to us. It is only the play of forces in matter producing effect sensible that is known to us. Hence the knowledge of the external world is referred into the knowledge of the mind with its modifications. We come next to a special knowledge. In speaking of subjective knowledge there is, firstly the ego, the *knowing self* or the conscious self; secondly the internal phenomena of which it is conscious. The internal phenomena are of two kinds. They are either the voluntary intelligent, self-conscious action of the mind, and hence may be designated *deliberate* then or the passive mind functions effected in the existence of the body by the presence of the human spirit. These may therefore be called the *vital actions*.

As a *practical* analysis, therefore, of the knowable leads us to a *threefold* *locality* for human spirit *deliberate* or *active*, and *passive*. These things, then are fit to be called *domains*. The conclusion to be derived from the above enumeration is, that if the account of *human* concerning Vedic *domains*, as we have given *is* *correctly* *true*, we should find Vedic *specifying* these *things*.

time, locality, force, human spirit, deliberate activities, and vital activities, as devatas and no others Let us apply the crucial test

We find, however, the mention of 33 *devatas* in such *mantras* as these —

II. यस्य त्रयस्त्रिंशद्देवा अङ्गे गात्रा विमेजिरे ।
तान् वै त्रयस्त्रिंशद्देवानेके ब्रह्मविदो विदुः—अथर्वः
X xxii. 42-7

I. त्रयस्त्रिंशतास्तुवत भूतान्यशामन् प्रजापतिः
परमेश्वरधिपतिरासीत् ॥ Yajur, xiv. 13

“The Lord of all, the Ruler of the universe, the Sustainer of all, holds all things by 33 *devatas*.”

“The knowers of true theology recognize the 33 *devata* performing their proper organic functions, as existing in and by Him, the One and Only.”

Let us, therefore, see what these 33 *devatas* are, so that we may be able to compare them with our *a priori* deductions and settle the question We read in the Shatapatha Brahmana,

स होवाच महिमान एवैषामेते त्रयस्त्रिंशत्त्वेव
देवा इति । कतमेते त्रयस्त्रिंशदित्यष्टौ वसव एका-
दश रुद्रा द्वादशादित्यास्ता एकत्रिंशदिन्द्रश्चैव प्रजा-
पतिश्च त्रयस्त्रिंशाविति ॥ ३ ॥ कतमे वसव इति ।
अग्निश्च पृथ्वी च वायुश्चान्तरिक्षं चादित्यश्च द्यौश्च

11 *rudras* 12 *adityas*, *indra* and *prajapati*, 33 on the whole. The eight *vasus* are 1 heated cosmic bodies, 2 planets, 3 atmospheres, 4 superterrestrial spaces, 5 suns, 6 rays of ethereal space, 7 satellites, 8 stars. These are called *vāsus*, for the whole treasure of existences resides in them, for they are the abode of all that lives, moves, or is. The eleven *rudras* are the ten nervous forces enlivening the human frame, and the eleventh is the human spirit. These are called the *rudras*, because when they desert the body, it becomes dead, and the relations of the dead, in consequence of this desertion, begin to *weep* (from root *rud* to weep). The twelve *adityas* are the twelve solar months marking the course of time. They are called *adityas* as by their cyclic motion they produce changes in all objects, and hence the lapse of the term of existence for each object. *Aditya* means that which causes such a lapse. *Indra* is the all-pervading electricity or force. *Prajapati* is *yajna*, (or an active voluntary association of objects, on the part of man, for the purposes of art, or association with other men for purposes of teaching or learning). It also means the *useful animals*. *Yajna* and useful animals are called *prajapati*, as it is by such actions and by such animals that the world at large derives its materials sustenance. 'What, then, are the three *devatas*?'—Asks Shakalya. Says Yajnavalkya, they are *locality*, *name* and *birth*. "What are the two *devatas*?"—asked he. Yajnavalkya replied, 'the positive substances, *prana* and negative substances, *auna*'. *Idh, irdha* is the universal electricity, the sustainer of the universe known as *satratma*. Lastly, he inquired 'Who is the one *Devata*?'—Ann Yajnavalkya replied, "God, the adorable."

"Leaving off all other *devas* it is only the Supreme Soul that is worshipped on account of Its Omnipotence. Other *devatas* are but the *pratyangas* of this Supernal Souls, i.e., they but *partially* manifest the glory of God. All these *devas* owe their birth and power to Him. In Him they have their play. Through Him, they exercise their beneficial influences, by attracting properties useful and repelling properties injurious. He alone is the All in All of all the *devas*."

From the above, it will be clear that, in so far as worship is concerned, the ancient Aryas adored the Supreme Soul only, regarding Him as the life, the sustenance and dormitory of the world. And yet pious Christian missionaries and more pious Christian philologists are never tired of propagating the lie before the world that the Vedas inculcate the worship of many gods and goddesses. Writes a Christian missionary in India

"*Monotheism* is a belief in the existence of one God only, *polytheism* is a belief in the plurality of gods. Max Muller says, "If we must employ technical terms, the religion of the Veda is polytheism not monotheism." The 27th hymn of the 1st Ashtaka of the Rigveda concludes as follows "Veneration to the great gods, veneration to the lesser, veneration to the young, veneration to the old, we worship the gods as well as we are able, may I not omit the praise of the older divinities."

The pious Christian thus ends his remarks on the religion of the Vedas. "Pantheism and polytheism are often combined, but monotheism, in the strict sense of the word, is not found in Hinduism," Again says the

from missionary Ram Mohan Roy as already mentioned, despised the hymns of the Vedas, he took the Upanishads as the Vedas, and thought that they taught monism. The Chhandogya formula, *ekamevadvaitam*—*one is also*—was also adopted by Keshab Chander Sen. But it does not mean that there is no second God, but that there is no second anything—a totally different doctrine. Thus it is obvious that Christians, well saturated with the truth of God, are not only anxious to see monism in the Vedas, but even in the Upanishads. Well might they regard their position as safe beyond attack on the strength of such translations as these.

In the beginning there arose the Hiranagarbha (*the golden germ*)—He was the one born lord of all this. He established the earth and this sky—Who is the God to whom we shall offer our sacrifice—*Ma Ma*.

He who gives breath, He who gives strength whose command all the bright gods revere—whose shadow is immortality—shadow is death—Who is the God to whom we shall offer our sacrifice?—*Ma*.

Hiranagarbha, which means God in whom the whole luminous universe resides in a potential state is translated into the golden germ. The word *garbha* is detached from its proper construction and placed in apposition with *patir* thus giving the sense of—the one born lord of all this. Perhaps there is a deeper meaning in this Christian translation. Some day not in the very remote future, these Christians will discover that the *golden germ* means *conceived by the Holy Ghost* whereas 'the one born lord of all' alludes to Jesus Christ. In one of these future

happy days, this *mantra* of the Veda will be quoted as an emblematic of a prophecy, in the dark distant past, of the advent of a Christ whom the ancients knew not. How could they, then adore him, but in the language of mystic interrogation? Hence the translation, "Who is the God to whom we shall offer our sacrifice?" Even the second *mantra*, Max Muller's translation of which we have subjoined above, has been differently translated by an audacious Christian. What Max Muller translates as "He who gives breath", is translated by this believer in the word of God, as "He who sacrificed Himself, (i.e. *Jesus Christ*'),) The original words in Sanskrita are

“ य आत्मदा ”

Let us pass from these *mantras* and the misinterpretations of Christians to clear proofs of monotheism in the Vedas. We find in Rigveda the very *mantra* which yields the golden germ to European interpreters. It runs thus—

हिरण्यगर्भः समवर्त्ततो ग्रे
भूतस्य जातः पतिरेक आसीत् ।
स दाधार पथिवीं द्यामुतेमां
कस्मै देवाय हविषा विधेम ॥

“God existed in the beginning of creation, the only Lord of the unborn universe. He is the Eternal Bliss whom we should praise and adore.”

In Yajur Veda, vii 19, we find—

विश्वतश्चक्षुरुत विश्वतो मुखो
विश्वतो बाहुरुत विश्वतस्यात् ।

संवाहुभ्यो भवन्ति स पतये
 यथाभूमौ जनयन् देव एकः ॥

"Being all within, all motion in Himself He pervades
 with His power the whole universe. Heated he is by One
 alone."

And in the Atharva Veda XIII. 14-15 we find—

न द्वितीयो न तृतीयस्तु यो नाप्युच्यते ॥

न एव एक एकवृद्धेन एव ।

अथैवमिदं देवा एवमुक्ती भवन्ति ॥

"There are neither two gods, nor three nor four
 nor ten. He is one and only one and pervades the
 whole universe. All other things live, move and have their
 being in Him."

THE ATMOSPHERE

वयवायाहि दर्शतेमे सोमा अर कृताः ।

Vayavayah darshateme soma

arankritah tesham pah shrudhi hovam

RIGVEDA SUKTA, II—MANTRA I.

—O—

THERE is nothing which so beautifully illustrates the bounteous dispensation of Providence in Nature as the atmosphere, which surrounds our earth to a certain height all around. This gaseous envelope, which is elastic and at the same time so rare, is especially characterized by its lightness, which renders it amenable to the influence of disturbances even the slightest.

Imagine a huge mass of iron lying inert, say, in one position, and suppose a heavy stone or dense ball dashed against this grotesque ball of iron, and see what follows. You will see how sluggishly the grotesque mass obeys the impulse, how reluctantly, as it were, the idle mass parts with its inert condition to be alive with the activity of the impinging stone! What a wide contrast does the atmosphere present to this inert mass. Each molecule of the air, on account of its lightness and elasticity, so readily succumbs to all forces from without, so mechanically multiplies the impulse, as it were, by its mobility,

that even the slightest tremor first communicated sends it dashing along the free path of molecules until it meets a fresh obstacle with another molecule. This molecule, like a waiting postman, immediately stands up and proceeds on its errand. The next molecule obeys it and the next, and the next (in a few moments of lapse (not more than five or six seconds) in the twinkling of an eye, when a vast tract in the expansive ocean of air—a tract of almost a mile in area, 3 times 11½ feet long—is furrowed over with the rapidity of a lightning bolt. Just imagine how scrupulously delicate the molecules of air must be. There is not a faint flutter of wing, not a molecular breath that ever escapes and does not furrow tracts upon tracts of air with exquisite exactness.

Tremors are thus communicated with geometric exactness by this mobile air. The invisible air-vibrations into which the molecules of air are taken are only beautiful beyond description. A genuine transcript of the true state of things are the words of poet Emerson

"Thou canst not wave thy staff in air
Or dip thy paddle in the sea,
But it curves the brow of beauty there,
And the ripples in rhyme the oars forsake."

It is on the mobile wings of air that the fragrance of flowers, the odour of essences and the effluvia of substances are wafted to immense distances, creating diffusion and blending motion into uniformity and harmony. It is with us a light and a tremor-communication of effort is a thing and yet a better and a more exact

appellation for this masterly creation of the Architect of Nature than the ugly, unmeaning, inexact and half articulate word *air*. It is exactly this sense italicized in the above lines which the Vedic word *vayu* conveys, the word with which the *mantra* quoted above begins *

We have seen what the physical properties of the molecules, which compose the air, are. Let us now consider the phenomena which it gives rise to. The rays of the sun falling upon the earth heat the layers of earth, which in their turn heat the layers of air in contact with them. These layers of air when heated become lighter and ascend. Colder layers of air rush in to fill up the vacuum created by the ascending hot layers of air, are heated in their turn, rise and make room for the advent of other similar layers of air. Thus a rapid circulation of heat goes on, which gives rise to currents. Of exactly similar nature are all the winds that blow. From the same cause originate those north-easterly and south eastern winds known as trade winds. The portions of earth near the equator always receive a greater quantity of heat from the sun than others do. The layers of air in contact with those portions of earth rise, and colder air from northern and southern quarters rushes in towards the equators and, coupled with the rotatory motion of earth gives rise to north-eastern and south-eastern winds. Firstly then, we find that the air is always circulating and giving rise to currents in perpetual motion. This *vayu* then (*ayahu*) is always moving in the form of currents.

* *Vaya* has been derived by Niruktakara from the root *Va*, to move, to carry odoriferous matter, or from *lah* to communicate tremors. Hence its meaning as above indicated.

\ it are what effect it has in modifying the course of light. The rays of light which traverse the high air and interplanetary regions, all meet & strike upon the highly rarefied layers of air high above the thick air passing from vacuum into air. These rays of light deviate in their course and pursue bent directions on account of refraction. Had the lower layers of air through which they pass been of uniform temperature once they are bent, & its course is contact with the first layer of air the ray of light would have then pursued its course undeviated in air. But meeting with layers of air of different temperatures and therefore of different densities, it is, at each step that it advances, a little reflected and again refracted again and again, so that these rays, having passed through a curious path, all agreeing ways that it is possible to imagine accurately most terrestrial objects including the eyes of man, and therefore acute vision. How wonderfully it modifies and extends the range of vision will then be apparent. Even the most delusive appearance known as the mirage that often seen by travellers in the hot sandy deserts, is due to the reflection and refraction of light at innumerable surfaces presented by the heated layers of air. It is through air then that we are able to see not only in the direction of the source of light the sun, but in all other possible directions. It thus extends the range of our vision. It is also due to air that such delusive phenomena or appearances as the mirage start into vision. Our atmosphere then besides giving rise to currents, extends the range of our vision

and is the cause of the phenomena like that of mirage. Hence, it is that we have, in the Vedic *mantra*, we have quoted above, the word *darshata, i e*, the cause of extension of vision and of other appearances.

Another and a very important part which the air plays in the economy of nature is the purpose it serves of the maintenance of vegetable world. Always there is a certain quantity of carbonic acid present in the air, which though however slight, is sufficient to maintain the equilibrium between the animal and the vegetable worlds. The trees and plants, the main body of which essentially consists of carbon, derive all their carbon from the air. The leaves of plants possess a kind of substance called chlorophyl, which in the presence of light decompose the carbonic acid gas present in the air. The carbon which results from this decomposition, is assimilated by the plants, and the oxygen is set free. This oxygen freed from carbonic acid, so to say, is what animals inspire. Animal life is maintained by the continuance of animal heat, which is due to the combustion of oxygen with carbon of the animal frame. Thus all animals inhale oxygen and exhale carbonic acid, whereas all plants absorb carbon of the carbonic acid. Air thus stands a common vehicle between the vegetable and the animal kingdom. Due to these causes, all plant and animal life depends upon the presence of air. Not only is air necessary for the existence of plants and animals, but also necessary for the maintenance of dynamical equilibrium between these two classes of organic nature. The word *soma* used in the Vedas, means something that springs out of

with a despondently dejected the effect of which as such, is necessarily dependent upon the air in which it springs. Hence we have some good and some evil in the bed concert of air, inasmuch as the atmosphere furnishes the plants with air and food, and preserves the equilibrium between the vegetable and the animal kingdom.

Another fact worth noticing in discussing the properties of air is that it is the vehicle of all sounds. Man has been often called a speaking animal and, we doubt the capacity of speech distinguishes man to a very great extent from other members of the animal kingdom. Now this speech, which, in this sense is at the root of our advancement & civilisation cannot ally consist of a the list of sounds, the utility of which would have been entirely nullified, if there had been no air. Air then, is also a vehicle of sound, a fact which is mentioned in the maxim in the last two words, *struck a sound*—it makes our words, and all others as well, heard.

सिधं हुवे पूत दक्ष वरुण च रिशादसम् । १
 धिय धृताचीं साधन्ता ॥ ऋ० अ० १ सू० मं० ७॥

*Mitram huve puta daksham varunam
 cha rishadasam, dhiyam ghr ituchim sadhanta*
RIGVEDA 2nd SUKTA, 7th MANTSA

—0—

THE word *rig* signifies the expression of the nature, properties and actions and reactions produced by substances. Hence the name has been applied to the Rig Veda as its function is to describe the physical chemical and active properties of all material substance as well as the psychological properties of all mental substances. Next to a knowledge of things comes the practical application of that knowledge, for all knowledge has some end, that end being usefulness to man. Hence Yajur Veda comes next to Rig Veda, the meaning of Yajur being application. It is upon this double principle of liberal and professional (or technical) education that the well known division of the course of study of Aryans, the Vedas, into Rig and Yajur, is based.

Let us not mock at the position taken by the Aryas with respect to the nature of the Vedas, for there are reasons enough to justify this position. Not being a novel position at all, it is the position that is maintained even according to the Hindu systems of mythology which are but gross, corrupt distortions of Vedic sense and meaning. The broad and universal distinction of all training into professional and liberal has been alto-

The history of the latter with regard to
 everything else has been connected with a
 particular view of the world. The Vedas
 used to be regarded as a universal truth, as of divine
 and profound sources, and were regarded as a source
 of highest thought. The Vedas, instead of being
 grasped as the guiding principle of all active progression
 of human nature, is regarded as an equivalent of certain
 creeds and doctrines. It is with the Rig and Yajur Ved
 Yet, even in the distorted account of the Vedas
 and the Vedas, the Puranic mythos of the descent of the
 Vedas into Rig and Yajur, the liberal and the profound
 is faithfully preserved. The Rig and Yajur collection
 of hymns and songs is praise and glorification
 of the gods and goddesses; whereas the Yajur
 for the mantras recited in the rituals, the active part of
 religious ceremonies. This is the view taken by the
 so-called scholars of the day.

Let us not, however altogether forget the original
 distinction. There is much to be said in
 The mantras at the top, which has been taken from the
 second Sukt of Rig Veda, cited here as a sample to
 justify the view entertained by the Aryans with respect
 to the Rig Veda. This mantra describes the (divine)
 process or steps whereby the well known of liquid
 water can be forested by the condensation of other
 substances (gasoline, etc.). The word *akasha*
 is the dual number indicating that it is two elements or
 bodies which combine to form water. With it are
 two elementary substances according to the mantras.

ure, is not a matter of least importance to determine. The words used to indicate those two substances are *mitra* and *varuna*

The first literal meaning of *mitra** is measurer. The name is given to a substance that stands, as it were, as a measurer or as standard substances. It is the measurer of density, or of value, otherwise known as quantivalence. The other meaning of *mitra* is "associate". Now in this mantra, *mitra* is described as an associate of *varuna*†. It will be shown how *varuna* indicates oxygen gas†. Now it is well known that hydrogen is not only the lightest element known, nor is it only monovalent, but that it has a strong affinity for oxygen, hence it is that it is described as an associate of *varuna*. Many other analogies in the properties of *mitra* and *hydrogen* go on to suggest that what is in Vedic terms styled as

*The word *mitra* is formed by adding the unadī suffix *kīa* to the root *mī*, according to the sūtra, *Amichimisha sī blyah* *bra* Unadī Kosh iv, 161 —The meaning is *minoti manyam* *karoti mitrah* or one that measures or stands as a standard of reference

‡ *Varuna* is formed by adding unadī suffix *unan* to root *eri* to accept *Kri bī daribhya unan*—53. Hence it names that which is acceptable to all or seeks all

† Again, we have in Nighan u, the Vedic Dictionary, Chapter V Section 4 *Mitra itī danamasce pathitan*. Hence *mitra* means that which approaches or seeks association with others

is in fact identical with heat or *Man* (火) as it now occurs as synonymous with *śukla* (white), parts of the *śukla*, and *śukla* is well characterised by its brightness or by its power to lift up.

The second element with which we are concerned in *śukla* (Fire) is the substance which is *śukla* (white). It is the element that every living being needs. It is known properly as *śukla* (white) because it renders all the elements white, and it is the element which is physiologically found in the blood by means of it and thereby keeping the frame alive. It is by these properties that it is so generally distinguished but is specially characterised here as *śukla* (white). Some scholars perceive that the substance thus distinctly characterised is oxygen gas.

Another word used in the *śukla* is *śukla* (white) *śukla* is pure fire from impurities. *śukla* means energy. *śukla* is *śukla* is a substance purified of kinetic energy. With that is equated with the kinetic theory of gases cannot we in *śukla* (white) the properties of a highly heated?

The meaning of the *śukla* taken as a whole is this. Let one who is desirous to form water by the combination of two substances take pure hydrogen gas highly heated and oxygen gas possessed of the properties needed and let him combine them to form water.

It would, no doubt sound strange that long before Calcei's performed his experiment on the composition of water or long before oxygen or phlogiston were

known to the philosophers of the west, the true philosophy of the composition of water was recorded in the Vedas and perhaps understood by many philosophers of the east

Let not any of our readers imagine that the interpretation of the Vedic mantra given above is purely an imaginary production of the brain of the writer. The above interpretation is in fact based upon some already existing commentaries of the Vedas, and there is enough either in ancient commentaries or in that of Swami Dayananda to suggest this and similar interpretations of all mantras

८

उदुस्य आतथेदनं देव दइति केतव ।

हृमे विष्णुाय नमः ।

BEFORE I begin an exposition of a few mantras of the
 both Sakta of Rig Veda bearing on the object of
 this treatise let it be remarked in due justice to ancient
 sages who lived in days when Vedas were better under-
 stood and more sincerely honestly and truthfully revered
 than the Bible, the Zend Vashtha and the Quran are now
 a days—yes, let it be remarked in justice to those sages
 that in their minds many of the obvious and more reason-
 able forces of nature were the ladders by which they rose
 from the lower depths of material objects to the celestial
 heights of divine contemplation. Their thought familiarly
 climbed upon the ladder of physical forces till a glimpse
 of the divine was obtained. Inspired with the light
 thus received, it as easily retraced its footsteps to share
 the luxury with their fellow-brethren, the whole race of
 mankind. Let me observe that, whilst I speak in this
 strain, I am giving expression to no vague, indefinite ideas
 of my own, to no whisperings of erratic imagination.
 These are no words of flattery offered as sacrifice at the
 altar of national conceit, prejudice or custom. They are
 rather honest but imperfect expressions of the lives which
 sages no doubt lived. But more sublime and astonishingly
 charming was the state of those four *rishis*, Agni, Vayu,
 Aditya and Angirah—living the beginning of creation,
 whose faculties were according to the beliefs of the

Aryans, illumed by the light of the Vedas The dizzy heights to which the thoughts of these *rishis* soared, but with no giddiness, the meandering labyrinths through which their intellects traced the unity of the divine design, quite unperplexed, and not fatigued, but rather cheered and invigorated by the effort, these are facts which we—innocent darlings of the nineteenth century, the era of civilisation—we darlings fed in the lap of material science, nourished by the milk of ponderous truths, discovered by elaborate ratiocinative and inductive Processes, and supported by the carbonaceous aliment of isolated facts and nitrogenous edibles of constructive theories and hypotheses, cannot easily conceive The truth-loving, poetical, beauty admiring temperament of these *rishis* is far, far removed from the money-loving, practical, use-admiring callous minds of moderns No wonder, then, that we should find so very few expositors of Vedic lore in this era of research and activity Truth with sectarian ignoramuses and religious-prejudice-spectacles wearers may be measured by the number of its adherents or votaries, and well might Mahomedans and Christians argue that their overwhelming number in the world is a proof that Christianity is the dispensation destined by the divinity to prevail over the world But far different is the case with Vedic truth, It is perennial It is not the birth of to day or yester-day just as other religions are The measure of Vedic truth is not its power to grow and spread, but its inherent power to remain the same, ever to day and to morrow “Men and parties, sects and schools are, but the mere ephemera of world’s day Truth, high seated upon its rock of adamant, is alone eternal and supreme”

It was this truth of God and Nature that was given to the primeval sages to comprehend. Justly as your unimpaired eyes roam about in vain from here to there, from rocks to vegetables and from vegetables to men in detect vainly but the inspired seers of the lower realm have perceived the unity of the Divine mind in every thing. The minerals, the vegetables and the animals were to think but one book in which they read but the power, the justice and the wisdom of God. Owing to the solicitude of revelation, were foreshadowed before their mind's eye, landscape paintings of human institutions, achievements and aspirations in a long distant future, and in all these, they saw the spirit of the Father brooding with paternal care over eternal designs for the happiness and benefit of his children. Render imagine yourself once in this exalted condition. Then alone are you in a fit position to grasp and understand the deep meaning of the Vedic mantras. This deep meaning is every where spiritual. There is a fine and very sublime link between mantra and mantra, which can be perceived but in such moments of exaltation alone.

We must bear in mind that the internal is always the most difficult to grasp. The modern scholar whose powers of the senses have been well trained to observe and carefully note the phases and changes undergone by physical phenomena, may not find any connection or coherency between mantra and mantra. To him the Vedas may be mere collections of isolated prayer to deified forces of nature including wind and rain but to an earnest, truthful inquirer who has entered the exalted

condition, I have above described, there is that logical coherence and philosophical regularity in the sequence of the *mantras* which can only be called *divine*. In this spirit should we study the Vedas, a sample of which is presented by the 50th Sukta.

I have before said that the universe, as construed by the *rishis*, is a ladder along which the inspired mind rises to the contemplation of the Divine. This exactly is the subject matter of this mantra of the 50th Sukta of Rig Vedas.

In a dark, rainy stormy night, in an hour of stillness and dead slumber, a thief entered the treasure room of a peaceful family, and stole away all precious metal and property, and in the mad joy of his possession ran amuck over twenty miles of wet ground, and betook himself as quite safe from the grasp of the owner. But the light dawned, and the owner awoke in full consciousness of his stolen property. Fearlessly and resolutely but in entire calm of his mind, he began the track and slowly but surely reached the rendezvous which the thief had appropriated. This is but mere analogy. I have nothing to do with the stealth and the property, but with the indelible, unmistakable footprints, not of a thief, but of the Creator on the frame of the universe. The wise man who has his intellect illumined by universal benevolence, **सन्निवः धीराः** bent upon finding out the *first cause* begins his inquiry, and, slowly but steadily tracing nature back to its source, halts at God. There, the inquisitive and penetrative faculties of the intellect are cooled to satiation, and lie in peaceful repose in the enjoyment of the treasure thus found. To such a mind, what are the

different objects of this universe? They are the footprints
of the Deity who proceeds tracked by the divine rays of
wisdom along their path of action. They are just as the
Vedic mantra puts it, विष्णुर्देवोऽङ्गिरसो विश्वं पश्यति
the design types which point with one voice to Him
from whom all has proceeded वातदिदम् He is the eternal
Seethat ever exists देहम् He it is who makes over
this grand panorama of the universe इमाविश्यामसूर्यान्
So also is the case with the rest of the material universe.
Would you see the variegated objects of nature? Study
then, the swarms playing amidst wonders of space,
and see what they lead you to. They lead us to the globe
of the sun, who is truly the cause of all we see for not
only has all the matter of the planetary system proceeded
from the sun, but the very light which reveals to us the
existence of the material objects in their diverse forms
and colours, points out to the sun as its source and foun-
tain head. Would you, then, see the universe? Then
observe that the universe points you out to the wonder of
the planetary system, the sun. Would you enjoy your term
of earthly life in peace of mind and happiness perpetual?
Observe, then, that the entire happiness of the world
points out to the sacred institution of marriage, of
grihasta, the institution where alone the filial, the
paternal, the fraternal and conjugal affections are cooled
to situation; for from pure truthful affectionate &
wisely conducted marriages can happy progeny flow
into the world. This is the threefold sense of the Vedic
mantra. It points out to God as the fountain of all

creation, to the sun as source of all the planetary world and its chromatic wonders, and to the sacred institution of marriage, founded upon pure, rational and spiritual physiology, as the source of all happiness and bliss on this earth

अपत्ये तायवो, तथा यन्त्रा यत्यक्तुभिः ।

सूराय विश्वचर्चसे ॥

I come now to the second' mantra of the same Sukt
I have mentioned that happiness on this earth can only be secured by rightly conducting the sacred and divine institution of marriage. I need not speak here at length on this subject, but it will be well to point out that all attempts to regenerate our society in any other direction are merely fruitless. Do you ever expect a heroic, Swami-like, intellectual progeny from the present marriages contracted in an unnatural age, by parties forced by unnatural compulsion of parents into these contracts? To expect this, is to expect an impossibility. Teaching and preaching, education and consecration, can mould the superficial or the external character of man, but strike ineffectually at the deeper and more permanent character, the hereditary or the constitutional character, which flows with our blood, which we have drunk in with the very milk from our mothers, which we have inherited with our very bones and nerves, blood and muscles. Believe it, then, that true cure of the evil that exists in our society is the physiological cure, the cure that strikes at the very root of the disease of our society, the cure that professes to mould the individual and society from their

very birth, by enjoining the observance of the law of
 conjunction of pure truthful, rational marriage as con-
 trasted with compulsory impulsive, formal marriage.
 What, then, is the law of marriage, what is the observance
 that can secure health and happiness to society? The
 answer to this question is imprinted in the indelible be-
 ded law of nature. Observe the starry host of heaven
 नक्षत्राः or the moisture laden ocean of the atmosphere
 तायवी. What law do they obey? Are they not regula-
 rs in the succession of the phenomena they present?
 Regularly after every 24 hours does the starry host of
 heaven connect itself with night युत्सवाः नियमित्य २४
 hours in २४ does it depart from the society of the sun,
 सूर्याय विगुह्यते. Here are suggestions for the married
 people. Let them reflect over this and chalk out a path
 of piety for themselves. Again study the atmospheric
 envelope. What law does it obey? Regularly after every
 year does the monsoon blow regularly for six months
 do the winds come due to take the same direction. These
 proclaim a lesson for the married. The lesson is for the
 married parties to separate themselves invariably during
 sunlight as the starry host connects itself from
 the sunlight, for every 24 hours. The second lesson for
 them is to observe the law of periodicity just as day and
 night, trade winds and monsoons obey their periodic
 laws of succession. If these laws were carefully observed
 there would flow into the world that happiness and
 health which were never realized before. Earth would
 be a beautiful garden to live in, far more attractive and

real than the paradise of the Moslems or the heaven of the Christians, which is all paved with hard gold, with no stuffed cushions to relieve us of its hardness. Compare with this natural, spiritual, physiological marriage the beastly marriages, a countless number of which are being contracted from day to day in our country without exciting the ridicule or even the thought of the reformers. I count upon no responsibility so serious is that of ushering an individual being organised like our own selves into the world. How many are they who feel this responsibility? How few children are there who are born of a wilful, appreciative, conscientious consociations of their parents? How many of them are the products of lust, blind impulse, and purely fortuitous concourse? These are the things that may well sound obscene to many of our delicately constituted readers, but human nature is sacred in every part. It calls for obedience to its dictates in each direction. It is no respecter of creeds or personalities. Let us learn, then, the law of periodicity, and realize the happiness that is in store for us by virtue of the divine ordination mentioned in these mantras,

I Do not wish to leave the subject of marriages without impressing upon the minds of my reader another truth which, is not the less important, a truth which forms the subject matter of the 3rd mantra of this Sukta. What language, but the sweet accents of the Vedas, adequately, express this truth? These are the words of the mantras —

पदप्रमथ वेतरो विग्नरो जनां यनु ।

मार्जतो यमरो यया ॥

I do not wish to discuss any question of philosophy or metaphysics. This is not an easy task. The discussion may be extended. Several people in the East and West, upon physical and philosophical light and heat, a natural scientific description. Each person in his house, the candle, the candle and the power of destroying the other. The candle and the candle are vibrations only differing in the frequency of occurrence. The vibrations are in the same mode as light is capable of being reflected. Heat is capable of being produced. So is heat. Heat is the life of the animal frame. Light is the life of the vegetable kingdom. Heat produces the atmosphere. Light produces the cloudy mass in the air and pours it upon the place. Light and heat are the galaxies of nature. Heat is with light is made of refreshing. Heat and light are the life and life of the body. They are each other's complement and complement in nature. The gorgeous display of colors, which light makes us familiar with, are not less in the equally important molecular and thermal changes which heat works out. By heating a body you can raise it to fluorescence till it begins to burn by proper means you can concentrate light and make it heat our articles and even burn them if necessary. It is not how they proceed from the sun, the common fountain. They

proceed in pairs. The warm, exciting, heating rays of the sun are the **आजन्तो अग्नयः** of the Vedic mantras, the light-emitting, 'colour-providing' variegating rays of the sun are the **रश्मयो केतवः** of the mantra. How beauti-

fully are they interlocked with each other. Held in each other's embrace, these caloric and spectral rays dart from the sun, and journey on together through millions of miles of gorgeous space to fall on earth, to warm life and illuminate dormant intellect. The arrogant man of science may claim to himself the power of sifting these interlocked, interwadded, embosomed conjugal pairs of rays by iodine filters and alum solutions, but there is no absolute separation, no entire dissolving of bonds. Let us learn a lesson from this. The Vedic mantra enjoins upon us this lesson. It enjoins upon men the duty of learning the lesson of conjugal relation from the heat and

light rays of the sun **जना अमु**. It inculcates the inviolability of the marriage tie. Let the married couple preserve their sacred relation inviolable and intact, and not frustrate their peace and happiness by adopting the opposite course of free marriages. The designs of the Divinity can only be wrought by the inviolability of the tie. One inviolable marriage conducted according to the periodic law alone is compatible with an acquisition of the true knowledge of the Divine Being. This is the sacred law of inviolability that the Vedic mantras enjoin. But there is another and a deeper meaning of the man which should not be lost sight of. It is that light and heat permeate through every possible material object.

मनुष्येण ह्यसौ यमुपदिष्टः इत्यस्य हि तत्रोक्तं अत्रोक्तं
 कृतं । Let us not laugh at this proposition. It has the
 sound basis of science to support it. It is a statement
 of the manner in which the body is formed. There is no
 matter, of whatever description, that is not very dear to
 or completely dependant on the soul. Justice. What is
 the general law. Light is an accident of ether the
 sun is the source of light, whose vibration necessarily condi-
 tions light. Is there any substance throughout the range
 of created objects, wherein motion and ether do not co-
 operate and co-actually dwell? Yes, even in the same way
 the Divine essence lives within the very interior of every
 living soul.

"In the whole world there is no study, except that of the originals, so beneficial and so elevating as that of the OUPANEKHAT. It has been the solace of my life, it will be the solace of my death!"—SCHOPENHAUER.

ॐ । ईशावास्यमिदं सर्वं यत्किञ्च जगत्यां जगत् ।
तेन त्यक्तेन भुञ्जथा मां गृधः कस्यस्विद्धनम् ॥ १ ॥

1 —"By one Supreme Ruler is this universe pervaded, even every world in the whole circle of Nature. Enjoy pure delight, O man, by abandoning all thought of this perishable world, and covet not the wealth of any creature existing."

कुर्वन्नेवेह कर्माणि जिजीविषेच्छतः समाः ।
एव त्वयि नान्यथेतोऽस्ति न कर्म लिप्यते नरे ॥ २ ॥

2 —Aspire, then, O man to live by virtuous deeds for a hundred years in peace with thy neighbours. Thus alone, & not otherwise, will thy deeds not influence thee.

अमृत्या नाम ते लोका अन्धेन तमसावृताः ।
तास्ते प्रेत्याभिगच्छन्ति ये के चात्महन्ता जनाः ॥ ३ ॥

3 —"To those regions where Evil Spirits dwell, and which utter darkness involves, surely go after death all such men as destroy the purity of their own souls"

अनेजदेकमनसो जवायो नैनद्देवा आप्नुवन् पूर्वमर्षत्
तद्वावतोऽन्यानत्येतितिष्ठत्तस्मिन्नपो मातरिषु दधाति

4.—There is one unchangeable, eternal, intelligent Spirit, even more vigorous than mind Material senses

cannot perceive Him. Therefore it is not a hindrance
his absence from the material element and presence in the
Supreme Being constitutes perfection.

तदेकमिदं तद्वैक्यं तदुक्तं तदद्वयम् ।

तदकारम्ब्यं यवयं तद्वैक्यं मायाम् ॥ ५ ॥

5.—He knows not but himself and his own nature. To him
ignorance is like but to the water in a hand. He
perceives himself and not one of all.

यज्जु मर्त्यानि भूतान्यात्मन्येवाभ्युपगच्छति ।

मयभूतसु चात्मानं ततो न विजुमुपपत्ते ॥ ६ ॥

6.—He comprehends all beings as himself and his
Supreme Spirit, & the Supreme Spirit is not as he is
to him, as he is to him, as he is to him, as he is to him.

यज्जिन्मयापि भूतान्यात्मैवाभ्युपगच्छति ।

तत्र कीमोहः का मोहः पञ्चतन्मनुष्यगतः ॥ ७ ॥

7.—How can joy and sorrow be to him who is the Supreme
Soul, perceives the Universal Spirit as dwelling in all
beings?

मययगाश्च कर्मकायमयमन्त्राश्चिद्विद्वत्परापरिहम्

यमिमन्त्रायो परिम् अर्धमर्थायातयाताप्याम्

चिदभाषाशुतीम्य समाध्यः ॥ ८ ॥

8.—He comprehends all creatures. He is entire
Spirit without the least tincture of a material or an
extended one which is liable to impression or passion.

tion He is the Ruler of the intellect, self-existent, pure, perfect, omniscient, and omnipresent. He has from all eternity been assigning to all creatures their respective purposes "

अधन्तमः प्रविशन्ति येऽविद्यामुपासते ।

ततो भूय इव ते तमो य उ विद्यायाऽ रताः ॥ ९ ॥

9 — Miserable are they who worship ignorance, but far more miserable are they who arrogantly presume knowledge

अन्यदेवाहुर्विद्ययान्यदेवाहुरविद्यया ।

इति शुश्रम धीराणां ये नस्तद्विचचक्षिरे ॥ १० ॥

10 — Saints wise and firm assure us that ignorance, the life of senses, produces one result, and knowledge, the life of spirit, produces exactly the reverse

विद्याच्चाविद्याच्च यस्तद्देहोभय ५ स ह ।

अविद्यया मृत्युं तीर्त्वा विद्ययामृतमश्नुते ॥ ११ ॥

11 — He who realizes both, passes through physical dissolution by virtue of the life of senses, and enters into immortality by virtue of the life of spirit

अधन्तमः प्रविशन्ति येऽसमभूतिमुपासते ।

ततो भूय इव ते तमो य उ समभूत्याऽ रतः ॥ १२ ॥

12 — Miserable are they who worship atoms as the efficient cause of the world , but far more miserable are they who worship the visible things born of atoms

सम्यग्देवास्तु कर्माणादम्यंदास्तु सधर्मात् ।

इति मुनिमधीराणां ये मर्यादिवचसिरे ॥ १३ ॥

13.—Sages with a-bettered sense of duty than the world (p. 41) alone leads to our reward and that of the gods alike in the celestial.

संमूर्तिं च विभागं च यस्तदेवामय्य म च ।

विभागो न शून्यः तीर्त्वा संमूर्त्याश्रितमश्रुते ॥ १४ ॥

14.—He who realizes truth, and death which is the consequence of the worship of things which enjoy immortality the fruit of the realization of divine power displayed in stones.

हिरण्यमेव वाचय मत्पद्यापिहितं मुखं ।

तस्य पुनश्चावुच मत्पद्मप्राप दृष्टये ॥ १५ ॥

15.—"O Thou who givest sustenance to the world, care that face like the sun which is cool and calm by a veil of light so that we may accept it and know our whole duty."

पुण्ये वर्षे यम भुवः प्राप्ताप्य च्छू ह रश्मीन् मम ह ।

तत्रो यत्तु रूपदन्वाचमनात् पद्माभि

याऽभावसो पुण्य मोहमपि ॥ १६ ॥

16 O Preserver Sages of ages, Ruler Eternal be the life of the creation! Gather up Thy rays, so that I may be able to feel Thy glorious presence full of beatitude. This alone is my earnest prayer.

वायुरनिलममृतमघेदं भस्मान्तं शरीरम् ।

ओं कृतो स्मर कृतं स्मर कृतो स्मर कृतं स्मर १७

17 The air shall sustain the immortal spiritual body,
the gross one shall only last till cremation O thou! who
hast sown the seed of deeds, remember that the same thou
shalt reap

अग्ने नय सुपथा राये अस्मान्

विश्वानि देव वयुनानि विहाम् ।

युयोध्यस्मज्जुहुराणमेनी

भूयिष्ठान्ते नम उक्तिं विधेम ॥ १८ ॥

18 O All-wise Being! Thou art the source of know-
ledge, inspire us with Thy wisdom, lead us to rectitude
and drive off our evil To this end, we repeatedly praise
Thee and adore

EXPOSITION

— 0 —

RELIGION as existing at present exists has been grossly misinterpreted. Artificial prayers consisting of set phrases, uttered almost mechanically or at the best in a state of semi-consciousness, by an ailing humanity, in their lives and conflicts, have betrayed a human state, cruelly uncontrolled & passion, strong artificialities & the creature's weakness, forced restraint, and good things, in ethics, habit, fashion, custom, or best of society; earthliness, energy-willing and time-consuming truth and temperance, that priests and leaders of men have practiced the striking inequalities of men in the sight of heaven. There and should other also it is to be stripped the robe of religion and have it a shed, the world with its uncontrolled flood of misery and crime war and bloodshed. The conscience of religion has become completely degraded by habits of mutual hatred and diabolical enmity by breaks of vengeance and ambition, by anxiety toward glare of selfish eyes by anger bordering on intolerance, and by the dreadful pollution of false bond-principled localities.

Reason and faithfulness have been divorced from the entire domain of intellect. Religion has become a superstition with a mere profession of creed or opinions. Mere faith has been substituted for living good lives and doing gracious deeds. Words have dethroned action. Superstition and mythology have dictated explanations of the mystery of the universe—explanations that are not less interesting nor more true than the tales of Arabian Nights. Metaphysics has been driven to bear witness

to the competency of the story-telling, the manufacturing machinery of these explanations. Guess and conjecture fill the room of exactness and certainty. Dreams have been entrusted upon society as facts. Imagination has been strained to yield forth supernatural theology, preternatural miracles and unnatural doctrines. Human nature has been vilified, insulted and stigmatized, as wholly depraved. Hope and expectation have been banished from the future. Eternal hell flames and mighty engines of torture have been forged and imposed upon the people instead.

Many useful and noble faculties have been denied their privilege, others have been completely suppressed, whereas some have been put to severe persecution and trying ordeal. The whole stock of energy has been consigned to bigotry and dogmatism. Such, in fact, has been the office of religion.

Many gifted intellects, endowed with clear heads, have perceived this ruinous character of religion, and have revolted at it. And such is the sad spectacle still presented that many minds do yet revolt at it, and feel an aversion towards religion which is highly prejudicial to the interests of progress and truth. The noble conceptions which *true religion* might have engendered, the joys that might have sprung therefrom, fertilizing and gardenizing the soil of life, are entire strangers to the necessarily sceptical, honest, truth-seeking minds of present times.

Is not all this deplorable? Is nothing better possible? Are we to be set adrift on the ocean of *uncertain*, yet

Amorphous? Is the mystery of life really insoluble? Perhaps, it is not given to man to understand the nature of things! If it be so, life would be a sad emacade indeed; pains and miseries of this world would be simply unbearable.

Fortunately however the above is attributable to mere ignorance of true religion. True religion is free from all artificiality and fabrication. True religion is not merely word profession. It is no mythology. It is a living essence. It is highly practical. It is founded on entire truth. It takes for its basis the harmonious development of all the faculties, the righteous unfolding of all our capabilities of knowing and being.

Religion, true religion, consists in living a life in Divinity; for

"There's Divinity that shapes our ends,
" Rough-hew them how we will."

To realize the existence of this Divinity and to feel its presence everywhere and at every time with us, is the first lesson to be learnt in religion. The conception that Nature with her immutable laws and inexhaustible energies, with her infinity of forms and phenomena—is not an edifice of "chance" but has the positive fact of an Ever-active and Moving Principle diffused throughout Nature for its basis, is the beginning of religion. When one has realized this, and, in the joyous depths of his consciousness, exclaims, "BY ONE SUPREME RULER IS THIS UNIVERSE PERVADED, EVEN EVERY WORLD IN THE WHOLE CIRCLE OF NATURE," he is then fit to take a step further and

learn the lesson of individual reformation. But the lesson of individual reformation is never received till man has learnt to penetrate through the fleeting forms and phenomena of Nature to Nature's God.

Nature widely spreads her *evanescent* charms and *fleeting* beauties everywhere. Man is easily misled by her alluring attractions and wild enchantments to forget the *Everlasting, Eternal* God that resides in the interior of and pervades each of her *ephemeral* productions. The human mind, when as yet undeveloped and unrefined, is soon held in captivity by the bondage of sensuous phenomena of world. The gorgeous display of riches and wealth, the pompous show of rank and dignity, the luxuriant abundance of opulence, the licentious sensualisms of ease and affluence, not unoften unbalance the young unsophisticated mind, and merge him into a sea of *worldly* ambitions, and expose him to the *earthly* anxieties of Envy, Passion, Jealousy, Hatred and Vice. Not seldom is man thus blinded to the interests of his everlasting life, and the true delight that ever enters the bosom of a devotee, who, while holding himself aloof from the affections of this phenomenal world, contemplates the All pervading God of the Universe in his bounteous dispensation throughout Nature, is thus a stranger to him. Man consequently, requires to be reminded that this world is a *fleeting* show, that the pleasures of sense are never permanent, that an earthly life is an unweedy garden that never grows to seed, and that empty titles, names and honors, reaped in this world, will not last. It is wrong to hold out our affections for things perishable. The Eternal,

The highest good of all being the object, the wondrous system of Nature is the Divine Institution fulfilling this mission in a truly wondrous and sublime manner. Its eternal, immutable unchangeable-laws are the Divine code of perfect legislation, breathings from the essence of the Deity, modes in which He externally lives, rule and governs all. He keeps no vigilant, watchful, designing, conspiring, and often times dishonest, corruptible police to keep a record of each one's doings, and to superintend his actions, lest they disturb the general peace of His subjects. The Divine Institution is not susceptible of such weaknesses. Each one's memory is his infallible record keeper, whereas the sensible organisation that apprises each of pleasure and pain, is the Omnipresent police whose mission is not to punish but to teach lessons and to reform. There are no courts where law-suits are decided, but social feelings, affections and other emotions are the interior chambers of the mind where Reason sits on the throne of perpetual judgment. This is the *universal* machinery employed in the Institution of Nature. And its object being the highest good of all, it is so regulated that the personal good of each, on the whole, consists in the good of all. The eternal and immutable laws of Nature, consequently, recognize no special obligations, no individual isolated rights, and are no respecters of persons. One way the whole current of Nature flows—THE COMMON WEAL. No violation of this common course is possible without involving the transgressor in the consequences of his transgression—consequences by virtue of which he is thrown off from the

common course, for a moment to leave the general current undisturbed, to get himself purified, fortified, and resigned, if not willing to be subservient to the interests of the universal whole.

The law of justice that keeps each being in peaceful relations with his neighbour and dictates to him the standard of purity of his own soul, also enjoins upon him the self-chosen and pleasing duty of living in peace with his neighbours, and in love with the external world. The destruction of his equilibrium is what constitutes discord, disease, misery war and destruction. Should any individual, therefore, attempt to disturb the general peace the indispensable consequences of this transgression will inevitably devote themselves upon him. But far different is the case of one who consciously and willfully adopts the career that providence has designed and regulated for all. His path, though difficult in the beginning, leads straight to individual happiness and social welfare. His is a path of peace and tranquillity. No various heart-burn, no exhausting emulation, no feeling of contempt or disgust, no despair or disappointed view, no discontentment with his circumstances ever prompts him to swerve from the righteous course and spoil the temple of his personal health and individual existence. On the contrary his social and fraternal feelings are saturated to saturation, his disinterested nature uplifts him above ordinary persecution or selfishness, his reason is unclouded and his will pure and undivided. For let man once comprehend that there is a wise Providence that regulates the affairs of the boundless universe

around us by the ordination of general laws, let him once to his satisfaction understand, comprehend and know these general laws, and feel the existence of this providence in the depths of his heart fully enough never to forget it for a single moment in his life, let him once enter this condition, and he will feel the unity of his spirit with that of others. He will find himself in turn with all others. Then will arise perception of true brotherhood with mankind, for it will be seen that our delight consists in making others happy.

It is this perception of universal justice (which regards all mankind as one brotherhood and impels man to seek the harmonization of his interest with duty, lest in not doing so, he may transgress the motion of natural currents that lead to general good), that can keep one willingly and delightfully from infringing upon the right and liberties of others. Thus alone, when in accord with the maxims of universal justice, can he truthfully exclaim "COVET NOT THE WEALTH OF ANY CREATURE EXISTING." Only then, and not till then, is true individual reformation possible.

Religious progress, however, does by no means end here. Merely to keep one's self aloof from the turmoils of this earthly life, to remain, as it were, unimpressed by the fleeting show and vanity of this world, or lastly to abstain from infringing upon the rights and liberties of others, is but the negative or prohibitive side of religion with which even sinful indolence, coldest indifference, cunning reserve, and an abetter silence are compatible. Religion is too positive to be restricted to these

men prohibited it. The word precept is not
 one endowed with great energies, & a false equality
 has some *more* *inferior* & *degraded* put out to the
 existence of some higher code, & I cannot be silenced by
 the dictates of mere justice & morality. For purposes
 of mere practical utility, I am not bound by the
 enjoyments of others & pains & pleasures are not to be
 taken quite enough. But man is a more active power,
 innate energies, and stirring elements and all these are
 not in vain. They beckon him towards the constant
affirmation and *energetic* *assertion* of all his bodily and
 mental powers for the glorious end of achieving peace
 and happiness for himself and his neighbours. Activity
 and not sluggishness is the law of nature. Animals and
 plants, both are full of lively energy and
 restless animation. Nothing is idle. The ant is ever
 busy the earth we live upon ever whirls round and round,
 the plants and trees are ever employed in their growth
 the air is always circulating and the waters are always
 bubbling and flowing. Look round and say what
 religion does Nature enjoy, what lesson does it widely
 outspread? Everywhere is the domain of Nature then
 heretofore are ever busy in manifesting their presence.
 Nature enjoys but one religion, and that is Action —
 for good, for glory for health and for happiness of
 Each and All. ASPIRE THEN O MAN TO LIVE
 IN VIRTUOUS DEEDS FOR A HUNDRED YEARS
 IN PLACE WITH THY NEIGHBOURS THIS
 ALONE AND NOT OTHERWISE WILL THY
 DEEDS NOT CONTAIN ALL THEE.

To one who leads life of incessant useful activity, how beautiful is the universe ! It is a rich mine of happiness that only requires digging down and taking possession of And what are human faculties to him ? Speech with its power to soothe and to bless, music with its power to calm and refresh, affections with their mainspring to elevate and to support, and thoughts with their wings to take the loftiest flights and to soar, these and other faculties are full of hidden beauties Each organ is pure and holy, as its mission is beautiful and sublime Can one admire this beauty of the human system, appreciate it at its worth, comprehend its holiness, desire its purity & still remain disagreeable, discordant & deformed himself ? No He is too alive to the beauties of internal purity and the lustre of inward holiness, ever to linger in the darkness of filthy sensualism or hell of moral decrepitude Purity of motives, holiness of deeds and loveliness of lives are the internal beauties that he prizes most, and values above all He cannot degrade himself by destroying this internal beauty, for he is alive to the truth that "TO THOSE REGIONS WHERE EVIL SPIRITS DWELL AND WHICH UTTER DARKNESS INVOLVES SURELY GO AFTER DEATH ALL SUCH MEN, AS DESTROY THE *PURITY OF THEIR OWN SOULS*" He is rather filled with joy at the glorious capabilities of his existence as the priceless gift of life, is inspired with gratefulness for his endowment of reason, and moved to thanksgiving for the possession of his moral nature His spirit is moved with gratitude towards Him who pervades all immensity, animates the orbs of heaven

and the worries of earth and drags them for real elevation from unconscious to conscious. Where is there an object in the unfolded universe, that does not in pure the grateful mind to sing praises of Him who rains supreme everywhere, showering his titles and blessings around? In due acknowledgment of our dependence upon Him, our soul is in worshipful attitude towards Him, who is *Our unchangeable eternal intelligible presence*. The mind that Material senses cannot perceive Him but the heart breathes in homage ever grateful for the bounteous gifts of Providence. Flavours, odors, colors, sounds and other external impressions may affect the externally loaded man and render him forgetful of the source from whom all these flow but one in whose spirit berry blooms, and gratitude rises with fragrant incense of submissive homage cannot help penetrating beyond them. He *withdraws his senses from their state of action and perceives the Supreme Being everywhere present*. No more do the deceptive phenomena of the world any further delude him. Senseless charms & external vanities no more blind his expanded and internally unfolded vision. Far from external strife and in the quiet of his mind, he perceives the Supreme Being that moves all but himself does not move. Yes, to the worldly minded passion-stricken, ignorance ridden individuals, He may be far but to the wise He is at hand for "He pervades inside and outside of all". For a mind thus moved with the spirit of gratefulness, discord, discontent and disturbance exist no more. For what are jealousy hatred every contempt and other discords but different forms of antipathy? and how can antipathy exist, when one has realised for all

mankind a common destiny, when one perceives each spirit moved by kindred influences of the same Providence, each item of the vast universe animated by the same breath and each individual heart flaming with identical heaven lighted fires. All differences and distances melt away. Humankind is one family. All are brothers. There are no enmities, no jealousies, and no oppositions. Under the patronage of such a mental exaltation, one delightfully led to consider "*all beings as existing in the Supreme Spirit and the Supreme Spirit as pervading all beings,*" and "*cannot view with contempt any creature whatsoever*" nor can "joy and sorrow overtake him," for he perceives through his wisdom "*the Unitary Spirit that dwells in all beings*"

Reverence, admiration and love are the only feelings that actuate him whose perception extends to the Unitary Spirit of the universe. When one reflects, how one is moved with reverence even towards those superiorly endowed individuals, who though superior, are fallible, finite, liable to pain, ignorance, disappointment, weakness and their consequences, it ceases to be a wonder that he should be moved with greater respect, admiration and reverence towards Him who "*overspreads all creatures,*" is "*entirely spirit, without form, either of a minute body or an extended one, which is liable to impression or organisation, who is the Ruler of the intellect, self-existent, pure, perfect, omniscient and omnipresent,*"—the kind Father "*who has from all eternity been assigning to all creatures their respective purposes*"

Blessed are they who enjoy the knowledge of this Divinity, this Omnipresent Providence. Excessive joy

dwells in the conscious depths of those who feel the presence of this Great Reality. Life is a rich luxury an unmeasured blessing, an eternity of enjoyment and growth. Death is swallowed up in victory. But miserable are they who are that within the smother of *ignorance* all around: Insensible of this Great Reality of the universe, can *ignorance* go further? See what a wreck it makes. There is nothing more hideous than *ignorance*. It has been truly said that when man only once becomes conscious of his *ignorance* it is simply unbearable. Wisdom, therefore, begins with the *recognition* of *ignorance*. The wise Socrates was right, assuredly right, when he said, "I only know that I know nothing." All discord springs out of *ignorance*. See what a hideous picture it presents. Says immortal Parnassus:

‘यनित्यामुचिदुद्यानामसु
नित्यामुचिदुद्यानव्यातिरिचिदा ॥’

"Fourfold is the fearful power of *ignorance*. It leads him pitiable victim in the first place to conclude that this visible, audible universe, the very elements of which are given to decomposition and decay shall last for ever that this gross physical body this *mortal* coil, is the only thing that lasts after death. In the second place it leads him to the horribly erroneous conviction that female beauty, beauty which has been styled by some philosophers as a silent cheat, practice of falsehood theft and the like the very essence of which breathes filth and impurity are pure enjoyments and desirable. In the third place it plunges him into that ocean of pain and misery the sea of passions and sensualities in the gratification of which

the blind victim of ignorance imagines the acquisition of pleasure and of happiness. Fourthly and lastly, the victim of ignorance has no conception of soul and spirit. There is no soul beyond this material, ponderable, visible substance." Such is *ignorance*, and, as such it may truly be called *the life of senses*, for what is it but a recognition of no happiness beyond sensual pleasures, of no life beyond that of senses, and of no world beyond the sensible one? Surely "*Miserable are they who worship ignorance, but far more miserable are they who arrogantly presume knowledge*". For, he is not wise who presumes to know more, who claims to carry a pile of books in his brain, or a thick cluster of words and phrases in his memory, or a shower of sarcastic vocabulary in his tongue, or a borrowed magazine of that stuff, which is so useful for purposes of victory in intellectual warfare, commonly known by the name of *arguments*, in his promiscuous storehouse, called the *mind*. 'Wise' is rather he who feels *nobly*, thinks *nobly*, lives *nobly*, and ACTS NOBLY. The difference between *wisdom* and *ignorance* is the difference of opposites. Wisdom is life perpetual, happiness eternal, and peace for ever. Ignorance is all the misery, all the crime, all the sickness, all the evil, that exists in this world. The difference between wisdom and ignorance is all the difference that is possible in this world. They were not wrong who proclaimed *That ignorance, the life of senses, produces one result, and knowledge, the life of spirit, produces exactly the reverse*.

But blessed is the wise man who gets good of evil and nectar out of poison. For a wise man *the very senses*

have a sacred function to perform. This is the function of कर्मपाथना (*Karmapana*)—that well-ordered righteously-regulated religious life which leads to emancipation from bondage, from sin, from misery and from death. Yea, wisdom extracts discipline out of senses righteousness out of passions, elevation out of affection emancipation out of ignorance and yields forth as its fruit everlasting *life and immortality*. Of such, has it been said, *"If who realizeeth power he hath power of dissolution here to of the life of senses, and enters in to immortality by virtue of the life of spirit."*

Many are the victims of ignorance and direful are the forms it assumes. One of them is what may for want of a better name, be called scientific atheism. This is a belief in the omnipotence of atoms. The externally minded scientific man, whose mind is replete with conceptions of matter and motion with dynamical explanation, ever true to his intellect, of never believing anything except on the testimony of his senses begins the task of crude analysis. He dissects organised structures, nerves, muscles and tissues, and read insects, but throughout all the labyrinths of the brain, all the complicated network of clas and arteries, he finds no trace of an intelligent God, all is motion or matter in motion. He begins his physiological researches and ends in chemical and nervous action everywhere. Again he leaves the organic department of nature; and analyzes and decomposes, and again analyzes and decomposes each solid (and liquid and gas, now in a crucible then in a retort, now by means of heat and then by means of electricity here

with reagents, & there with reactions, but meets now here with God. On the *positive* evidence of *direct* observation, & from the *infallible* platform of *personal* experience, with his head raised in the *proud* majesty of *knowledge*, and his spine straightened with the *nervous* energy of *natural* forces he bids farewell, a last farewell to the barbaric dogma of a belief in the existence of an intelligent, all-pervading, moving Principle. His belief in the potency of atoms is boundless. They are *unanalyzable*, *undecomposable*, *simple monads*, *uncreated* and *eternal* in their existence, endowed (not by anything else, but naturally through necessity of existence) with inconceivable motions. In the vast *chaotic* operation of these atomic forces, specific atoms met through accident and selection, united together, assumed a *temporary* organization, exhibiting signs of breathing conscious life. This germ of life, on account of wholly unexpected and incomprehensible circumstances, under favorable conditions, (favorable through chance or selection) propagated itself and multiplied. Great was the *struggle for existence*, then raging. Many fortunately organized beings were, in the course of this struggle again hurled back into the atomic chaos whence they sprang. This is *extinction*. But some fortunate organizations (fortunate, not through merit or desert, nor through design, but *fortunate somehow*) survived this dire some catastrophe, and prospered. Their organization modified and developed new organs, and remodified and redeveloped, till man appeared on the stage. Now man, this man, the product of fortuitous combination of atoms, with his heated brain, exudes entirely unsupported doctrines of immortality & Providence. Can a sensible man

believe such dogmas? Vain are thy efforts, O thou ogre !
to construct an edifice of religion on the foundations of
mad. Human race as a race may for long get income
surrender but individual men shall only go back to the do-
dout from whence they sprang

Such is *scientific atheism*. All is uncertain and uncer-
tain. Life is but an accidental spark produced by the
friction of mighty wheels, the blind whirligig motion of
which constitutes the phenomena of the universe. There
is no hope of future life, no consolation for oppressed virtue
or disappointed justice, hereafter. A natural result of
which is that the worshipper of *own physical atoms* is dashed
headlong into a sea of unrighteousness and immorality
tramples all justice without a pang, suppresses all virtue
without a sigh and over the wreck of all that is noble and
eternal in human nature builds his philosophy of
desperateism. He is desperate in his actions, desperate in
his logic and desperate in his feeling. Or perchance his
is a philosophy of *resignation*. Desperate or resigned, there
is the sign of brutal violence to human nobility rendered
and as is the case of all violence rendered to human
nature, the subject is agitated, disturbed, restless, melan-
choly petrified or simply unconscious of himself. Miser-
able, though, is this extreme form of scientific atheism
there is a softened form of it, however which is compa-
rable with a certain and a very high degree of morality.
For there is in the scientific atheist a strong belief,
at least, in the unchangeable, and immutable nature of
laws, or of the order of nature. He is not superstitious
in the world of effects, at least, he is a master. Miserable

and disturbed as his life of the interior may be, his external life is, no doubt, a complete success. But far different is the case of one who, through superstitious ignorance, neither has any conception of the intelligent Ruler of the universe, nor a definite conception of any law or order in the universe, but substitutes for ennobling belief of a monotheist or the *natural* dependence of an atheist, a mean, grovelling or debasing worship of elements like earth, or of objects like stones and trees, or even of bodies of men. Of such degrading and debasing forms of theism, the world is full. There is the homotheism (man-worship) of the Christians, the locotheism of the Mahomedans, the idolatry of the Pagans, the pantheism of the Vedantins, and the polytheism of the Hindus, and all bigotry, dogmatism, sectarianism, intolerance and fanaticism of which the world's history is so full, is wholly attributable to, and is a standing evidence of the misery that these unrighteous forms of belief have wrought. Incalculable are the evils that flow from the worship of things visible. Truly has it been said "*Miserable are they who worship atoms as the efficient cause of the world, but far more miserable are they who worship the visible things born of atoms*".

Leading as they do to *widely differing results*, scientific atheism and various forms of worship of things visible, are capable of a use to which wisdom puts them, when they are no more those disgusting things that they were. The mighty hand of wisdom extracts out of things visible that sense education and useful application which is the primary basis or the granite foundation of all interior development. Man's life term is thus converted

bestowest, and wonderful the justice Thou dealest Sublime is the process by which *immortal spiritual body* (*sukshamasharira*) is raised out of the gross physical one & supported For even after death, Thou peoples us in a world, the very enjoyments of which are the fruits of the very seeds that here with our deeds we have sown

"O All wise Being ' Thou art the source of knowledge inspire us with Thy wisdom, lead us to rectitude, and drive off our evil To this end, we repeatedly praise Thee and adore, to this end we repeatedly praise Thee and adore

चौदम

MANDUKYOPANISHAD

तमिन्न तदचरमिदम् न च तन्मोक्षायान्म भूत
मरुद्विषदिति सबमोक्षार एव । यस्यान्वयिकानमा
तीत तदाप्याहार एव ॥ १ ॥

"Om" is the name of the Eternal and Omnipresent Spirit. The Vedas and Shastras, and even the whole universe, when understood declare the nature and attributes of the same Being. He Om, encompasses the

Notes—It is known has been translated into several languages, see Mahabhashya Patanjali Commented Ahar on the Seventh Shloka Bala. Say Patanjali—

अत्र न चरं चिदात् । न चीयते न चरतोति
वाचरम् ॥ यमीतिर्वा सरोक्षम् । अत्रातेर्वा पुनरयमो
वादिक् सत् प्रत्यय । अत्र त इत्यपरम् ॥

or known is that which does not decay or change; he akhara (from the root akh and anadhi affix) means, that which is all-pervading. Hence it real and omnipresent.

Swami Dayananda translates the passage thus to his friend then to the Vedas, (Respected Bhadrinath Sharma) p. 4 lines 21-25

past, the present and the future, and is perfect. He encompasses even what the past, the present and the future do not comprise.

सर्वं ५ ह्यतद् ब्रह्मायमात्मा ब्रह्मसोऽयमात्मा
चतुष्पात् ॥ २ ॥

He is the Great God, perfect in all. He is the Supernal Soul of Nature that also pervades my being. The phases of His existence are four in number.

उमित्येतदस्यनामास्ति तदक्षरम् । यन्न क्षीयते
कदाचिदक्षराक्षरं जगदश्रुते व्याप्नोति ब्रह्मैवास्तीति
विज्ञेयम् । अस्यैव सर्वैर्वेदादिभिः शास्त्रैः सकलेन
जगतावोपगतं व्याख्यानं मुख्यतया क्रियते ॥

This is literally as we have interpreted.

Our rendering of *Bhutam*, *Bhavat* and *Bhabishyat* is that of substantives meaning 'God encompassing the present and God encompassing the future, unlike the ordinary meaning of mere adjectives, meaning past, present and future, qualifying the word *Sairam*. Also, we have translated *Sairam* as perfect. For reasons, see Nirukta, Parishishita, 14th Chapter, 13th & 14th Kāṇḍas, where *bhuta*, *bhabishat* and *sairam* are given as names of God or Atma.

II — *Atma*, 'the Supernal Soul that pervades

सातिभ्यामनिन्मनिणौ । उणादि सूत्र ४ । १५३ ॥

or *atma* is derived from the root *at* and *unad* suffix *manin*

अतति व्याप्नोतीति वात्मा ।

Atma is that which pervades all, Also, see Nirukta III, 15

आगरितत्त्वानो वदि पद्य मसाह पकोमबिगति
 मुह म्यनमुगेशुना पद्य पाद ॥ ३ ॥

The first phase is the waked 1 phase. In this phase God is manifest as diffused in external waters; causing incessant interaction among the atoms. As is that crystallized into the organization of the universe determining the disposition of *atomic* organs of the 2nd and correlation of each of organisms to seek their enjoyments in the palpable matter and regulating with precision and order the physical motions of the universe.

आत्मातत्त्वोतिवावि वाम द्रव प्याद यावद प्यातिमत
 इति ॥

3 and Day needs translation the previous,

“अयमात्मा ब्रह्म

(one of the well known authorities of Neo-Platonism) in his *ESSAYS ON PLATONISM* p 193, thus —

“अयमात्मा ब्रह्म” अज्ञान समाधि दया में जब
 योमी की परमगुरु पश्यत होता है तब वह कहता
 है कि वह जो परम व्यापक है वही अयम मय
 व्यापक है ॥

Foot-note—phase of activity on (from the root *pad* which means to go) (1)

III — 414 — the 40 parts of the organization (1) II and (2) Eye (3) Ears, (4) Organ of Speech () Organ of Hearing

स्वप्नस्थानो ऽ न्तः प्रज्ञः सप्तान् एकोनविंशति मुखः
प्रविविक्तभुक्त तेजसो द्वितीयः पादः ॥ ४ ॥

The second phase is the contemplating phase. In this phase, God is viewed as living in the interior design that fixes the relation of the seven parts to each other, or adapts the nineteen functions of correlation to the purpose in view, thus interlinking the several ideas that constitute the design, and giving to the universe an invisible but interior organisation

tion, (6) Heart, (7) Feet They are also sometimes slightly differently enumerated Explanation to follow

एकोनविंशतिमुखः—

Nineteen internal organs of thought and correlation They are the 5 organs of senses, 10 of hearing, touching, tasting, smelling and seeing, 5 organs of action, 10 hands, feet reproductive organ, organ of excretion, and organ of speech, 5 *pranas* or vital nervous energies, 10 *prana*, that in the act of respiration forces the air out of the lungs, *apana*, that produces motion from outside inwards, *samana*, that circulates the blood from the heart throughout the system, *udana* that stimulates the glossopharyngeal nerves and moves the muscles near the throat to draw in food and drink and *vyana*, that produces motion of the body (See SATYARTHA PRAKASHA page, 242, lines 15—18), *Manas*, the organ of will and desire, *Buddhi* or organ of thought, *Ahita* or organ of memory, *Ahanhara* or organ of individuality,

Parishwanara has been here translated into God 'manifest as diffused', or 'causing incessant interaction or 'determining the disposition of organs, or 'regulating the motions' of the universe. Yaska thus says of *Parishwanara*, Nir VII 21—

येषु बुद्धो न ब्रह्मण आत्मं ब्रह्मिष्यते न ब्रह्मण जगु
 पश्यति तद्बुद्धम । बुद्धमस्मान् एकौमंतं मज्झान्धन
 एवानन्दमयी इवानन्दमुख जेतोमुख माघस्तृतीय
 पादे ॥ ५ ॥

When the human soul reposes in sound & order suspending all voluntary functions, neither willing nor desiring, nor dreaming, he is said to be *rasajyā* or in the slumbering condition. The third phase is the *asambharing* phase where like the human soul that is folded within itself, God is viewed as Himself, an Embodiment of all

वेद्युगलं ब्रह्मादिभ्युन् नरान् नयति विभु एतं नरा
 मण्डलीति यापि वा विद्यानर एव ध्यात् प्रसूतं सुखानि
 भेदानि ॥

Which means. — *Vibhū* means He who controls and directs all beings, towards whom all beings are led or who in himself *Prasūta* is One residing in all things and moving them

IV—*अप्रज्ञानम्*—

has been translated into contemplative phase, for in dream ordinarily called *svapna* it is only the mind that is active not discriminating between things and their thought. Hence the only realities present before the mind are its own thoughts. It is in this respect that *svapnasthana* has been translated into the contemplative phase.

Concerning the words *tej* as and *prajna* occurring in the next passage, Yats remarks, *Kirukia XII* 37—

ideas and principles, Himself all delight, enjoying but delight, only manifest in His consciousness, and endowed with the highest wisdom

एष सर्वेश्वर एष सर्वज्ञ एषोऽन्तर्याम्येष यो नि-
सर्वस्य प्रभवाप्ययौ हि भूतानाम् ॥ ६ ॥

Such is the Ruler of all, the Omniscient Principle, even the Controller of life interior from Whom has proceeded all, the Source and Resort of all beings

“प्राज्ञात्मा तैजसश्चेत्यात्मगतिमाचष्टे”

The words *prajna* and *taijasa* signify two modes of existence of Atma.

V.—The meaning of the word *anushupta* is very clear. It means sound sleep. The correspondence between the ordinary state called sound sleep and what is here called slumbering condition, is the spontaneity and regularity of motion without the direct and wilful action of consciousness.

Consider the state of a man in sound sleep. Although all volition is suspended, yet the involuntary functions are performed most regularly. The powers of volition seem to have become materialised or metamorphosed, hence *prajna* *ghana*, which literally means ‘intelligence solidified or embodied, hence the translation “embodiment of ideas and principles” (obs. PANNI’S ASHTADHYAYI, III in 77 *murti ghanah*). The root *han* assumes the form *ghann*, when the meaning to be expressed is *murti*, or solidification or condensation.

नाम प्रपञ्चं न वहिःप्रपञ्चं लोभयत प्रपञ्चं न प्रपञ्चमप्यर्थं
 न प्रपञ्चं न प्रपञ्चम् । अहमस्य ब्रह्मस्यैव साक्षात्कृतमनस्य च यम
 चिन्त्यमस्य पदेऽग्रमेकात्मप्रत्ययवत् । प्रपञ्चीयमस्य
 प्रपञ्चं विवर्तयते तत्तत्तु यं मन्यता स चात्मा स
 विज्ञेयः ॥ ७ ॥

A new line neither adjoined interiorly nor added
 (7-1) throughout external : are known in the transit : the
 sound between both ; neither embody merit of itself : hence
 brought with slightest consciousness, words and of
 VII.—Propounds the nature of the conditioned world :
 the phenomenal world from the point—

प्रपञ्चं विवर्तयते or प्रपञ्चं विवर्तयते च—

7-14, is rendered sensible or is developed full.

Chapotelet per jama rife to the at : mltly : lowest
 waking and dreaming. The word

लोभयत प्रपञ्चं or as Shankara says 'चक्षुरा
 नायस्यापुतिपेक्ष'

is put to indicate that here we include also the at : midway
 between both.

VIII.—The word 'मन्यते' has been here given : meaning
 something that represents or estimates the value of : neither
 the Udayi Koon 17 165—

जयामासमिभ्यस्तु 1 or सातोति साचा सर्म वा

material that which measures, estimates or gives the value of
 the object : or

consciousness; but as the Invisible, Unimpressible, Incomprehensible, Undefinable, Unthinkable, Unknowable Being, only Conscious of Self in self i.e. the Absolute and the Unconditioned, with no trace of the relative of the conditioned world about Him, All calm, All-bliss, One and Only This is the fourth or the essential mode or existence This is the Atma, the Universal Spirit He should be known

सोऽयमात्मा ऽध्यक्षरमोक्षारो ऽ धिमोक्षं पादो
मात्रा मात्राश्च पादौ चकार उकारो मकार इति ८

Om is the most estimable name of this Eternal, Omnipresent, Universal Spirit, the modes of existence of this Spirit being truly represented by *matras* or the single letters A, U, M, of which the monosyllable Om is made up

जागरितस्थानी वैश्वानरो ऽकारः प्रथमा मात्रा-
मेरादि मत्वाहाप्नोति ह वै सर्वान् कामानादिष्व
भवति य एव वेद ॥ ८ ॥

A, the first *matra*, means the wakeful phase, or God diffused in external nature, for A means that which

IX.—Here the *matra* A is shown as derivable from the root (*ap* *vyapita*.) *ap* to pervade, or as an abbreviated form of *adi* which literally means the very first step, hence the one who has taken the very first step, or only a zealous beginner

X.—Here U is shown to be derivable from *ut* *harsha* or *ubhaya*, the former from *krisha* to draw out an outline or mark, hence to design, and the latter meaning both,

is diffused throughout and is drawn in the first step
He who realises the (mode of Divine existence)
becomes gratified to the full measure of his desire and
he takes the 2nd step

संपुष्पानमृतेन सवारीं द्वितीया माकोट्यर्वादिम
पत्वाहोत्कर्षति च वे ज्ञानमन्तति समानय भवति
माखीर्षं मपिच्छुसे भवति य एव वेद ॥ १० ॥

At the second step comes the contemplative
phase of God living in the world of man ; for means
that which designs or desires both, designs & executes
He who realises the (mode of Divine existence)
attracts mankind towards himself and becomes
harmonised. Never is he in his family born a dualist
who can ignore the knowledge of the Divinity

संपुष्पान पात्रीं सकारणतोया मावा मितं
पोतिवा मिनोति च वा इदं सवमपोतिच भवति
य एव वेद ॥ ११ ॥

At the 3rd step comes the absorbing phase
of God viewed as Himself ; for he uses that which
measures all, or is the resort of all He who realises
the (mode of Divine existence) measures out () the
whole knowledge of the universe and returns into Himself.

अमाचचतुर्थोऽप्यवहार्यं पर्यचोपगमं शिवोऽहोत
एवमोहार अत्मेव सर्विगत्यात्मनात्मानं य एव
वेद य एव वेद ॥ १२ ॥

The fourth is no *matra*, for it represents the Unknowable, the Absolute, and the Unconditioned, without a trace of the relative or the conditioned world about Him. He who realizes this, the true ATMA, OMKARA, passes from self into the Ruler of self, the Universal Spirit, &c obtains *moksha* or salvation

(a) — That which measures all, = 'that, viewed in comparison with Whose infinite power, the structure of the universe is but finite and measurable.'

EXPOSITION

WORSHIP is the first act of pure religion. It is a spontaneous declaration of the warmest affections and distinguished from the false worship of the heathen where every action is pre-determined instead of being spontaneous, where we have declamation instead of declaration, and pretended show of assumed seriousness instead of free play of warmest affections. Such is not true worship. True worship on the other hand, is a beautiful genuine feeling profound attraction and soul absorbing meditation. True worship, as an outcome of pure religion, is deeply gratifying to human nature.

It is in the depths of the human soul lies the germ of all religion. Every human being is endowed with spiritual nature a nature that lifts him towards all that is pure and holy superior and eternal. Not only do the holiness of life purity of motives, sublimity of thought, and nobility of character in pure us with the appropriate feelings of respect regard admiration or reverence but our aspirations rise high towards the just, the true, the infinite and the divine. It is this part of our spiritual nature that is the foundation of all religion endows us with the sentiment of reverence for all that leads to high and noble aspirations and with the sentiment of humble gratitude for all that has contributed to our edification and elevation.

Like all other affections of the human mind, the religious affections are capable of being *misused* or of being *perverted* in their use. The religious sentiment, under the effect of excessive stimulation, may exaggerate or portray in brighter colors a simple truth, may over estimate or unduly estimate the sanctity of an action, and where the sovereign faculty of reason is yet undeveloped, or but very weak, this over estimation may develop into idolatry or superstitious reverence, or, on the other hand, where, through want of clear perception, or through want of interpenetration, the reasoning faculties are very active, but discerning faculties comparatively torpid, the consequence may be a sceptical, atheistic or disrespectful temperament. But the elevation felt or pure liberty enjoyed will be exactly in proportion to the *normal* exercise of this faculty. Man, in his ignorance, often worships a false deity. Instead of the God of *Nature* he worships a god of his imagination, a god of fashion, a god of popular sanction, or a god of his own feelings and ungratified desires. And what is the consequence? A life of superstition, unrighteousness, cruelty and injustice. A true mode of worship is therefore highly desirable, a mode of worship, not dictated by false religious education, or fashionable popular custom, but by the higher interests of spiritual nature and by the deepest penetration of Reason. This system of worship, it is the subject of *Mandukyopanishad* to furnish

It enjoins the worship of the Supreme Deity alone, the Eternal Omnipresent Being, the Supernal Soul of Nature

For what but a true concept of knowledge and realization of this Universal Spirit can be consistent with that overflowing, exultant, blissful attitude of the mind other than designated as worship. The worship of the Eternal Being is the only worship that sanctified the life of man. & this Eternal Being is everywhere named (Mukar
In Kathopanishad II 3 we read

सर्वं वेदा यत् पदमामनन्ति,
तवाप्नुमि मयाधि च ग्रहयन्ति ।
यदिच्छन्तो मङ्गमर्चयन् चरन्ति
तत्त पदं न्यपदेय मयोमि ॥
योमित्वे तत् ॥

One is the adorable Being to the study of whom all life of a devotee is consecrated or all practice of meditation devoted and whose realization is the basis of the four Vedas to accomplish. Or in the words of Chhandogya Upanishad

(योमित्वे तदचरसुब्रवीयसुपामोत्त)

One is the Eternal, Omnipresent Being He alone should be worshipped. Or more explicitly still in Mundakopanishad II 1 36

चीतं यदमिन् यो ह्यिषो वाप्तरिचम्

स षोऽन्तस्वरते बहुधाजायमानः

ओमित्येवं ध्यायथ आतमानं

स्वस्ति वः पाराय तमसः परस्तात् ॥ ६ ॥

He who *interiorly* and *invisibly* sustains the sun, the earth and the intervening space in their respective positions, even He who sustains the life of the brain, the lungs and all the various senses, is the Unitary Interpenetrating Spirit. Try, O men! to *know Him* alone, and leave all other talk, for He is the only *principle* that leads to immortality. Just *in* the heart, where all the blood vessels meet, very much like the spokes of a wheel meeting *in* the *nave* or the centre, resides the interiorly-governing Divine Spirit, manifesting His glory in ways multifarious. *Contemplate Him*, the Om, this interiorly governing Spirit, for thus alone can you reach with safety, the blissful haven, for beyond the ignorance begotten miseries of this troubled ocean of Life.

What, then, constitutes the contemplation of Om? What is the process to worship Him? An answer to this question is furnished in Yoga Darshana, I : 27-28.

Om is the inestimable name of the Supreme Being who is the Ruler of the universe. To recite this, His name,

and to constantly recall to our mind its profound signification, this is the two fold process of meditation called *pranayama*. Vyasa, in his commentary on the two *Sutras* remarks — "Om indicates the Ruler of the Universe, is it by mere arbitrary convention, or by some natural process, just as light indicates the lamp or the source of light? Surely the relation between the symbol Om and that of which it is a symbol, is not conventional but actual and the symbol but expresses the actual relation. To take a parallel example the relation between the father and the son is real. The relation *really* exists, before we can express it in such terms as these, He is his father, and he his son. Even before the cycles of creation to come these words signify things not arbitrarily but by a fixed natural standard, the same symbol, Om is made to express the same idea. Since it is an established fact with those who know revelation, or those sages who have realized what the relation between the signifying symbol and the thing signified is, that the words, their corresponding ideas, and the relation between them is eternal, or exists in nature and not by human convention.

Perhaps this truth will be more easily brought home to the sceptical reader of the nineteenth century if it were expressed in the (to us less acceptable far more indefinite) words of Max Müller who says "They (the roots) are phonetic types produced by power inherent in human nature. They are not as Plato would say by nature; though with Plato we

2 The recitation of Om, and the constant presentation before the mind of its signification, these are the two means of His *upasana* or worship, The *yogi* who constantly does both, thus develops concentration, or as has been elsewhere remarked, the aforesaid recitation and relization develop concentration, and concentration facilitates realization, till by the continual action and reaction of both, the light of the Supreme Divinity begins to fully shine in the heart of the *yogi*, "—*Vjas Bhashya Sutra* 27 and 28

The recitation of *Om*, and the constant presentation of its signification to the mind, being the two essentials of Divine Worship, it is of the greatest importance to know what the significance of the Unitary Syllable, *Om* is, for the recitation is only preparatory to the presentation. We have only said that *Om* is the Eternal Omnipresent Spirit. This is by the way of indication. But we have not as yet any definite knowledge of the detailed significance of this syllable. It is, however, a very palpable fact that no word is so sacred in Vedic literature as *Om*. It is regarded as the essence of the Vedas, as the highest the sublimest and the dearest name of the Supreme Deity, and is especially appropriated in *upasana*. No Vedic mantra is ever read without a previous recitation of this syllable, *Om*. It is not only because *Om* is the most soft, melodious and smoothly-flowing syllable in sound nor merely because the letters composing *Om* sponta-

should add that when we say by nature, we mean by the hand of God "—*Lectures on the Science of Language*, 4th edition, London, page 402

seriously and without education of any sort except the type of the babe who is just beginning his vocal exercises, but because there is some thing deeper, clearer and diviner in its significance. It is true that whereas other names of God are also names of things temporal, (for instance the Sanskrit *ishwara* is also the name of a governor even *Atma* is also the name of the universal ether and of the Vedas, *agni* is, besides, the name of fire and so on) *Om* is only the name of the Eternal, Omnipresent, Universal Spirit. That can only be a reason in behalf of its precision and definiteness of meaning but hardly a reason for the extremely superlative importance that is attached to it. It is also true that *Om* is more comprehensive in meaning than any other term signifying God in Sanskrit, or in other words, that it embodies a number of attributes that no other word or syllable singly does, but even that, is of secondary importance. The deepest and, in truth the highest, reason is that the signification of *Om* is the *key-note* of the realization of the Divine Spirit. The several letters of *Om*, with unparalleled exactness, mark the successive steps of meditation by which one rises to the realization of the true nature of Divinity.

The process of this realization is exactly the reverse of the process by which the mind acts on the external universe. If the latter be called evolution, or folding out of the internal faculties of the mind till they become externally manifest, the former should be called involution or folding the mind within itself, till the faculties that were working on the outer plane retire from outside activities and

for more interior work To take a familiar illustration, when an archer shoots a mark, he directs his attention from within outwards with his eye pointing towards the mark in the same straight line with the arrow, he stretches the bow and lets the arrow fly This is how the mind acts on things external To pass within, to contemplate Divinity, he withdraws his senses from their outward course, and when the outer activity of the mind is stopped, he passes by gradual steps of reflection, embodied in the constituent letters of the syllable Om, to the more interior and therefore more perfect realization of the Divine Spirit

Before we begin our exposition of the several letters composing Om, it will be useful to present a rough outline of the four planes of manifestation of mind's activity The Divine Being is a Spirit, and to realize this spirit we have to pass through his outer manifestations to the more and more interior ones, till the final cause, the Spirit, is reached Perhaps, our understanding will be much facilitated by taking the analogous case of the working of the human spirit, although it must be remembered, that an analogy is, at the best, an analogy, and not an exact coincidence

Let us begin with the case of a watch maker He has made the watch, and the principles embodied in the watch are doing their actual work The spring, the balance, the wheels, and other pieces of the machinery, all perform their respective appropriate functions and the minute and hour hands regularly move on the dial In fact, the skill, dexterity, and designing capacity of the

watch-maker are not only embodied in, and stamped on the watch but the very material forces and mechanical principles which the watch-maker had as his domain, are actually living in the watch and ever ready to be set free by the precision and regularity of motion of appropriate parts. This is the most external, the first, and the most palpable manifestation of the watch-maker's skill. Thus the spirit outwardly stamps matter with its impress. This is what has been designated (in the previous portion) the WAKEFUL phase or the externally manifest mode of spirit's existence.

But secondly the first watch-maker is the world, for he set up to manufacture a watch, must have made a *ideal watch* i. e., must have *designed* the watch. He must have previously known the principles of the force of activity his mechanism, the principle of transmitting motion by wheels and pinions the principle of escape-ment, the frictional, elastic and other properties of various iron, jewels, &c. and so it has patiently and slowly elaborated its limited scheme of the application of all these principles, till a definite purpose could be served out by them. He must have thought out the how and one of one arrangement and the other and chosen one in preference to the other till he finally settled upon a mentally perfect scheme of the watch. He must have mentally seen his ideal watch, thus slowly moving, thus ultimately stopping and regulating a winding for possibility of further movement. In short the watch-maker must have drawn from the promiscuous store-house of his knowledge the necessary items of

information, applied them properly, and for a time *lived in the self made design*, before he was actually able to undertake the manufacture of a watch. This is what has been called "the CONTEMPLATIVE phase", or the designing mode of spirit's existence.

And yet, this is not all. There was a time when no thought, not a trace of this design existed in the watch-maker's mind. His mind was a store-house filled with promiscuous information, not yet arranged or applied. And the principles embodied in the watch were not all he knew. Perhaps he knew much more about astronomy, physics, psychology, mathematics and æsthetics, perhaps about chemistry, medicine and ætiology. A merely fragmental part of his knowledge was brought to light and applied. Compared with the knowledge that was actually rendered *useful*, his whole information was encyclopædic. And yet, was he, all the while, conscious of the vast amount of massive information that he always carried about himself? Surely no! In moments of bright recollection, or in moments of practical necessity, only fractional portions of his deposited experiences were illuminated and called forth in conscious array before his mind, but the vast majority of his cognitions still *slumbered* as latent ideas, like congealed, solidified, incrustated bits, in the dead calm, silent chambers of his brain or sensorium. Revocable at pleasure, they were the *invisible* guests of his mind, living for the most part in the background, shaded from immediate recognition by the exquisite, dark veils of oblivion hanging over the chambers of memory. This condition has been deno

named the "SLUMBERING" phase," or the inactive mode of spirit's existence.

Beyond the *wakeful* phase or the active manifestations of the mind as embodied in material things and phenomena, like phantasmasgoria, projected from within the magic lantern outward on the specular screen; *beyond* the *contemplative* phase, or the energetico-display of mental activities, now reconnoitering one group of ideas, then another now selecting then arranging till, as in a dream, woven into its true strands before the mind the glowing picture of a marvellous painting heretofore unconceived; *beyond* the *sleeping* phase, or the inactive repose of mental faculties, replete with tactful or sensual mentalities, expelled to remain by the omnipotent law of reaction, at an imperative rest; *beyond* these and *behind* these, removed far far away from these phenomena activities and passive modifications, resides the *true reality* the *substance* SPIRIT the watch maker *essence*. This has been styled the **ESSENTIAL** mode of spirit's existence.

Let us clearly conceive these four modes of spirit's existence, the *Wakeful*, the *Contemplative* the *Slumbering* and the *Essential*. Man, in his life, repeats these modes of his spirit-existence every day. When it is broad daylight, and the human mind is fully awake the eye perceiving colors, the ear hearing sounds, the nose smell

& vapors, the tongue tasting fluids, and the body feeling solids, he lives a life in material objects. This is the *Wakeful* state. When the folds of darkness overtake the day and the ploughman homeward plods his weary

way, when, perhaps, the ignorant laborer tries to forget
 the severity of his toil in a cup of wine—the active world
 retires, and so does our model man. Straight he stretches
 himself upon bed. The eyelids close as with a super-
 incumbent weight, and gradually the other senses
 give way, and our model man has fallen into sleep.
 Perhaps he is dreaming. Suppose he is a student. The
 solid walls of his seminary have really dissolved from his
 view, for he is not waking. Without books, class fellows,
 or companions, he is lying on his bed, solitary and alone.
 And yet he dreams. The examination hall with its flock-
 ing candidates is panted before him, himself seated
 amidst them. The papers are distributed, so to day, so
 to morrow, and the so day after (all in the dream). Homo
 he returns in anxious wait for the result, and lo! a para-
 graph in a gazette or a telegram from a friend, brings
 him a cheering news, or, perchance, the news of his
 failure. Wonderful are the mysteries of dreaming.
 This corresponds to the *Contemplative phase*. Soon after
 the dream, or without a dream, he falls into a sound
 slumber. Where is that living voice, and that active
 brain? Where are those dreamy paintings? Have they
 vanished, melted into *nothing*, or been annihilated?
 Stored in the organisation, though invisible, lie the
 possibilities of their manifestations still, though con-
 gealed and materialized, so to speak. This is the *Slum-
 bering state*. How speedily flows the current of life. Day
 after day of wakeful activity passes away, night after night
 of disturbed or sound slumber is counted. And yet, amid
 these changing scenes, these veering manifestations, man

preserves a sort of independence, his *personal* identity because he is the *Essential existence* to whom the aforesaid states are either accidents or non-involving instances. †

Doubt not, gentle reader but that the spirit exists in these four moods. The wakeful mood is the most exterior the contemplative the more interior the slumbering the more interior still, till we reach the innermost reality the essential spirit. And so God a spirit which is all liber-
 holler infinite far *essentially exists, an embodiment of principles, does design and impart life and vitality to all external nature.* And the first glimpse of Divinity that is caught by the dry scientific mind is of the most external kind, in fact, derived from the adaptation of physical motions to one another their regularity precision, uniformity and such that other traits the universe exhibits to a mind well-versed in the study of effects. After the mind has familiarized itself with this there dawns a philosophical perception of the last word design of nature with which perception the mind soars higher till the design itself is found to be the outcome of constitutional and spontaneous tendencies of the Divinity called principles. Contemplating from the platform of these principles, the mind rises to the Fountain of all principles, the Essential Divinity embodying all in *One*.

These being the successive steps through which the mind rises to the contemplation of the Eternal, *Om*, present Being, the syllable *Om*, which consists of three letters A, U, M, or अ उ म and ॐ is made the means of this contemplation; for A presents the wakeful phase, U the

contemplative, and M the slumbering phase, not merely mnemonically but by virtue of their inherent meaning. Hence, the true devotee, in the recitation of Om, thinks of the three letters composing Om, dwells on the meaning and signification of each letter which represents one corresponding phase, and thus lives alternately in the order and regularity displayed in nature, in the design moving nature, and in the principles spontaneously and naturally elaborating design. Since the very lowest phase thus contemplated, involves but the highest generalization of the order of the universe, its contemplation is preeminently calculated to develop concentration & concentration facilitates contemplation, so that ultimately, by the continued action and reaction of both, the light of the Supreme Divinity begins to fully shine in the heart of the *yogi*. Hence the words of Vyasa :

“स्वाध्यायाद्योगमासीत, योगाक्षुधायमासनेत् ।”

स्वाध्याय योग सप्त्या परमात्मा प्रकाशते ॥”

We come now to the explanation of the three letters अ, उ, and म् or A, U, and M

In contemplating the deep signification of A (the *yogi* holds before his mind the vast expanse of the universe with its mighty orbs rolling in their magnificent splendour undisturbed through vacuous paths, carving ethereal waves of unseen exquisite beauty in the ocean of infinity, and contemplates upon the grand meaning of the universe, for in the words of the Upanishad, the mighty volume of nature is spread as a commentary on the nature and attributes of the Eternal Omnipresent Being. The uni-

verse appears to be dominated & dominated again by a combination of definite parts. And such is the uniformity of plan in this organisation, that even the most distant stars—whose light, emitted millions of years ago, carried on the speedy wings of ether at the uncanny rate of 180,000 miles per second, has not as yet been able to penetrate the atmosphere of our earth—yet even stars more distant are organised materially on the same plan on which the solar system, of which our earth is a part is constructed. To contemplate the wise and intelligent structure of the universe a structure even as perfect as that of the most highly developed being on earth, with a structure as well endowed with a brain, a stomach, the feet and the various other parts partly composing the wondrous organism of the macrocosm let us turn our attention to the sublime realities of Akasha Veda (Kam. 4, 31—34) on the grandest form of the universe as typically represented by our solar system

यस्य भूमिं समास्तरिचमुतोदरस्य ।

दिर्घं यच्च कुं सूर्यानि तथैव अरेष्टाय ब्रह्मणे नमः ॥

यस्य न्यूनयसुयन्द्रमाय पुनर्ष्वरः ।

यस्य वातं पावापातो यच्चुरक्षिरक्षो भवनः ।

दिगो यच्च कुं पृथानोदाथै अरेष्टाय ब्रह्मणे नमः ॥

अथर्व. काण्ड १ अ ११ यनु. ४ मंत्र १२,

१२।३४३।१

Which mean —

'We approach (in our contemplations) with highest reverence, the Great Adorable Being, who has made this frame of the universe as a living demonstration of His existence, as a highly fitting lesson on His nature and attributes, and who has placed in this wondrous organisation the sun with its luminous atmosphere as the brain, (1) the super terrestrial space intervening between the sun and the earth as the stomach, (2) and the earth (typical of all planets) as the lower body, the feet (3) 'We adore the Great Being in whose creation the sun & the moon are the two eyes, (4) and Heat the mouth (5) 'We adore the Great Being who has made the atmosphere the lungs, (6) and the directions of space the organs of hearing (7) Let us adore Him, the Infinite Being, the source of all Wisdom

'Here is displayed to the mind of the devotee the scheme of perfect organisation. For, is not the sun, with its atmosphere, the brain of this system? The brain in the human body, technically called the *cerebrum* and the *cerebellum*, is an organisation of sublimated elements, a battery of vital powers, the seat of nervous energy, the controller of all motions and functions of the body. And the sun too, like the brain, is a reservoir of sublimated elements, — an infinitely powerful battery of magnetic, electric, optic, actinic, caloric and dynamic forces, the seat of all combustible, vegetative energy, and of what has been called in geology by the technical name of *sub ærial denudation*, the controller of all planetary and cometary motions. And the super terrestrial space

breathing with the atmosphere is truly the stomach, the
 origin of digestion, refining and elaborating, the materials
 consigned to it. It is in the atmosphere that clouds are
 formed, vapours attenuated, streams of electricity generat-
 ed, surface particles of earthly salts and metals volatilized,
 and the products of all these processes diffused and
 mixed up, till all is reduced to a homogeneous fluidity
 carried above the lower strata of the atmosphere there
 condensed, and then poured out as pure precious plant
 feeding rainfall. Very like the stomach that after re-
 fining, sublimating and attenuating the food it receives
 extracts from its juicy contents the elements of the
 crimson vital liquid, and pours it forth, like rainfall, into
 the heart. Before however the materials pass into the
 stomach, they have to pass through the mouth, that by
 the aid of its maxillary organum divides and re-divides
 the solid food, till it is powdered down and mixed with
 saliva and then converted into a fluid material. In the
 same way before the earthly materials are consigned to
 the stomach, the atmospheric space, they pass through
 the mouth, the Heat. For what is the channel that
 transmits the earthly materials to upper regions? What
 is it that powders, atomizes, and reduces to vaporous
 subtilty the hard solid materials of earth, or what is it
 that dissolves these materials in the saline of nature-
 water? It is heat that does all the work. Impelled by
 the restless, vivifying vibratory oscillations of Heat,
 solids are dashed into liquids, & liquids into gases. It is by
 Heat that gaseous particles, thus endowed with rarity are
 borne on the wings of warmth to upper regions of com-
 parative cold. It is Heat that kicks out of the liquid lake

the watery elements of the atmosphere. Heat is the mediator between the earthly materials and the atmosphere, just as mouth is the mediator between the food and the stomach. And the foot is the lowest part of the organisation, symbol of obedience to the throned monarch, the brain. It obeys the motor impulse communicated to it from the brain through the nerves. So does the earth obey the influence of the sun communicated to it through the ethereal channels of space. The eyes, in the human organism, are constructed to enable man to perceive colours & develop taste. Similarly, the light beams of the sun, *anurasa* of the mantra, develop the spectral universe, thus standing in the same relation to the universe as the eye stands to the human body. The human lungs are fitted not only to act as the bellows, drawing in and expelling air or to oxygenate blood, but to draw in invisible elements that directly strengthen the brain. So the atmosphere is fitted not only to attract particles of vaporous matter or repel the suspended earthly particles but to draw out from the earth, especially at the two poles, as if at the ventricles, streams of positive and negative electricity that leave the earth for ever and for good.

'The analogy, * therefore, is complete in every reasonable aspect. The whole universe, to the contemplation

* To impress the reader with this part only the analogy we will present of slightly differing pictures of the same from different parts of Vedic literature, so that he may be able to form a somewhat general and comprehensive conception of the organisation of Nature, and not take the analogy too literally.

We quote Yajur Veda XXXI 13

of a creative power, a living, a directing power, the
the eyes, the ears and the feet. And it is thus that the
human body is organized. For every the perfect adapta-
tion of the mouth to the stomach, of the ear to the
height of the lungs to the knee and so on, of the
whole body and the surrounding correspondingly, a
adaptation of the parts of the human body to a
moment for take the One person. Christ Jesus is
glorious in His incarnation. For every in the
body let us inquire, Are the brain, the lungs, the stomach
and the other parts in vain merely to carry out mere
physical or physiological functions, all unconsciously like
pieces of dead matter? Is this beautiful adaptation of
parts merely the result of chance or of more consciously
conscience of eternal. Here the blind forces of matter

नाम्ना चासीदन्तरिषण् मीर्षां धो वनवत्त न
पद्मां भूमिर्दिप्य' गोदानया लीलां चक्रेअपनु ॥

God has played super territorial games in the p. 100 of the
remark, we in the place of the boy's arch in the p. 101 of the
fort, and open arms in the place of the ear arch
in Haudahall. 14 we read -

यन्निर्मूर्धा चक्षुषो बभ्रुषुर्लो दिग्गोत्रे वा'ग्व
हस्तायवेदा । पाशु माया हृदये विष्णुमस्य पद्मा
पृथिवी श्लेष परंभूतान्तरात्मा ॥

The Eternal Spirit that abides in the interior of all things has indeed dwelt in the midst of the human soul from the beginning. He is the source of all life and the source of all knowledge. He is the source of all love and the source of all truth. He is the source of all beauty and the source of all goodness. He is the source of all peace and the source of all joy. He is the source of all hope and the source of all faith. He is the source of all wisdom and the source of all power. He is the source of all grace and the source of all glory. He is the source of all life and the source of all death. He is the source of all birth and the source of all rebirth. He is the source of all resurrection and the source of all redemption. He is the source of all salvation and the source of all eternal life. He is the source of all happiness and the source of all bliss. He is the source of all peace and the source of all joy. He is the source of all hope and the source of all faith. He is the source of all wisdom and the source of all power. He is the source of all grace and the source of all glory. He is the source of all life and the source of all death. He is the source of all birth and the source of all rebirth. He is the source of all resurrection and the source of all redemption. He is the source of all salvation and the source of all eternal life. He is the source of all happiness and the source of all bliss.

met unconsulted, and, after unexpected, unknown and unpredictable clashes, embraced each other and linked themselves into the apparently beautiful organisation of man? No, this adaptation of functions is not in vain. The edifice, constructed of the brain, the lungs, the stomach, the feet, the ears, the eyes, and the mouth, is but the building of the theatre. The adaptation of its rooms is the design of the architect. Surely, the architect made it for some one to act in. Who are, then, the actors on this arena of the human organisation? The actors, no-doubt, there are, but they could not manifest their skill and activity without a proper and well-managed stage. These actors are the five organs of sense — of hearing, of touching, of seeing, of tasting, & of smelling, the five organs of motion, the hand, the feet, the throat, the generative and the excretive organs, the five vital nerve forces, of expiration, of inspiration, of blood circulation, of glossopharyngeal action, and of muscular contraction, in general, *manas*, the internal organ that originates the impulse to communicate with the external world, and displays the power of imagination, *buddhi*, the faculty of decision, *chitta*, the faculty of memory, and *ahankara*, the organ of personality. These are the nineteen invisible actors in the drama of life. The human spirit, through the physical temple, manifests his powers of life, sensation, locomotion, memory, perception, imagination, decision and individuality. For how can life be manifested, unless the various parts of the body be mutually adapted, the one supplying the demand of the other, and the mechanical, chemical and electrical forces, generated by their mutual action and friction, be

equilibrated? It is thus necessary for the body to possess an organisation, before it can evolve mechanical and electrical forces in equilibrium with each other and further it is necessary for these forces to be well organised, before life can manifest itself. And it is only when life has thus vitalized the body rendered it elastic, impenetrable and vibrant, that it can manifest any tendency towards sensation or locomotion. Not before the principle of sensation is fully established, can perception and imagination dawn; and it is only after perception has provided with requisite mental apprehensions, that the faculties of comparison and discrimination can come into play and weave the mental impressions into generalized, symbolic ideas. It is these ideas that memory takes in, and so carefully stores. And lastly it is on the faithful retentivity of memory that the mystery of personal identity hinges, for what is personal identity but that each human spirit feels himself as separate from all others, on the ground of the entirely distinct experiences he has had. It is thus evident that the physical temple is but a grand stage well-prepared for the purpose, on which the master-dramatist the human spirit, sends his vice-gerents, each in his turn, one after the other to act and prepare the stage for the ensuing. On the stage of the physical temple appears the first vice-gerent Life, acts his scene and prepares the ground for the next vice-gerent Sensation. He in his turn, plays his own part, and fits the scene for the advent of Perception. Comparison and Memory in turn, till human spirit himself, to the last appears on the fully prepared stage to manifest the

potencies of his *personal individuality* Not without purpose, then, is this beautiful adaptation

As with the human spirit, so is it with the Divine Being Why this wonderful disposition of the sun, the moon, the planets, the atmospheres and the elements in the actual positions, they hold in Nature, but that the Divine Spirit required the organisation of physical elements into a perfectly vitalized body of the universe, like unto man, to manifest His eternal elements of Universal life, sensation and intelligence, and to give His impersonal personality an expression on the outer plane Hence it is that the *yogi* starts with the letter A of the syllable Om, repeats in his mind its deep signification, pictures to himself the seven-organed fabric of the grand universe, settles himself upon its functional and anatomical organisation, contemplates its necessity, its purpose, its usefulness, and its reality, is deeply impressed with the existence of the more interior and, spiritual principles (the nineteen principles enumerated above) impatiently pressing for manifestation and thence contemplates the All regulating, All pervading Spirit, *Vaishwanara*, which is exactly the sense of the letter A out of the three letters composing Om

And now to the second phase of contemplation Out of order, comes out order, out of chaos, chaos Organised forces acting upon matter will produce organised structures, a chaos of forces can only result in chaos Mathematical science is full of proofs of this proposition Take, for instance, the orderly, uniform, and regular motion of a body in a circle Mathematicians tell us that this motion is the result of two forces, *centrifugal* and *centripetal* If

the or edge of the living body be a real line tangent to the curve to which it moves. The rectangular force is the ¹ $\frac{1}{2}mv^2$. These mathematical facts are that when a

body is moving in a circle its centripetal and centrifugal forces are balanced by each other and has a definite relation to the velocity of the body and the radius of the path. This definite relation (or which is the same thing, reciprocal relation of the two forces) alone can produce circular motion. Let there be another definite relation, and the motion will be elliptical. Thus it is clear that it is the internal organization that gives form and order to the outer manifestations. Or to give further illustrations. It is the internal arrangement of particles that determine the solid. It is the internal mobility of the particles that produces the rubber liquid. It is the internal internal extreme mobility of particles, producing what is called the expansion of the molecules along free paths that produces the gaseous condition. We take more familiar examples still. It is the remarkably internal organization in the seeds that give each of them the power to reproduce exactly its own kind and no other; and finally the human spermatozoa, endowed as they are, with internal through intricate organization because of being formed by extracting, through the activity of the vital essence, particles from all parts, organs, and faculties of the living body (पञ्चादहाध्यात्मसि। सप्तमविद।) are only by virtue of this interior organization capable of reproducing exactly the human organism. Thus it is clear that it is always the internal organization of producing tissues that develop form, order organization and

adaptation in the exterior. Must not, then, the All-regulating, All pervading Divine Spirit, *Vaishwanara*, that builds up this grand and highly perfect edifice of His Physical Temple, the universe, be also Himself *organised*? Surely the plastic, formative, associative, dissociative principles of the Divine Power, must themselves flow into *definite tendencies*, and be filled with a law of *co operative sympathy*, causing periodicity in their activity, just to give birth to such precision, regularity and periodicity, as the sun, moon and stars, together with the earth and planets, display in the succession of days and nights, of seasons and tides, of light and darkness, of rising and setting, of eclipses and occultations, of perihelion and aphelion, of forward and retrograde motions, and of the alternating phases of the satellites. And yet that is not all. There are millions, nay billions of organisms of each species—and the number of species both in the animal and vegetable kingdoms is innumerable—each not only growing, living and reproducing its own kind, but also manifesting feeling, sensation, perception, judgment, memory and intelligence, according to the degree of its refinement. Whence this display of wonderful powers and activities? Surely the Divine elements of life, sensation, and intelligence, must have likewise flowed into mutual harmony, fused into unity, and interblended into an interior organisation, whereby to develop such well endowed and adapted organisms of living beings. Before the materials of the Universe were disposed into the seven parts of which the fabric of the Universe is made up, the interiorly organised Being, *Taijasa*, 'brooded over the design of creation, and before the elements to

motion were appropriated by life, those of life by sensation, and those of sensation by intellect, hence these endowing organisms with various faculties to some Divine Being, *Jagannath* is in the yet contemplated design of living creatures. To contemplate God, His existing designs, in the interior constitution of the universe is to contemplate Him in the 2nd phase or the *Contemplative* phase, or which is more literally the *Dreaming Phase*. For as in a dream when man but partially awakes from the conscious work and action of the cerebrum; a so-called physical sleep comes on. The activity of the senses, whereby the external spirit might have acted upon outer matter is suspended yet the mind is not at rest. Physical amidst the many chambers of his cerebral mansion, it collects the materials of his recollected sensations and ideas, and for the time not discriminating between these ideas and the objects of which they are the ideas, weaves them into a texture, and whilst dreaming enjoys the scene, just as really as though the texture had been made up of the actual objective material. So is it with the *Contemplative Phase*. For although we do not view God as acting upon universal matter and disposing it of in various shapes, yet we view Him as in a dream, associating particles of matter aggregating and disposing them to their respective places, till an entirely complete design is interiorly contemplated. As if retired from the physical universe God is viewed as contemplating the design of creation.

From this view of the *Duality* which is exactly the sense of the 2nd letter *U* comprising *Om*, the *yogi* passes of the contemplation of the 3rd letter *M*, corresponding

to the third phase, the *Slumbering* phase. We have mentioned that in the state of dreaming the mind is but partially retired from the conscious work and action of the cerebrum. When, however, sound sleep overtakes the dreamer, the mind wholly retires from the cerebrum, only maintaining the life of the physical frame, restoring the vitality and strength of the body, by its recuperative and constructive processes, which take place all of them, so to speak, involuntarily. So let us contemplate the Divine Spirit. Let us consider what determined the flow of the Divine elements of life, sensation and intelligence, into mutual harmony? What made the elements of God's intelligence arrange and dispose themselves into a perfect design of the universe? The human mind is moved to a conception of new thoughts or to a planning of new designs, either under the influence of education or under the stimulation of some keenly felt necessity, or, in a few cases, also through prospective caution. But the Divine mind is not subject to such laws of *education*, *necessity* and *precaution*, as frail human beings are controlled by. The law of Divinity is His own constitution. Unimpressed by any external motive, unurged by any want born of necessity, the elements of God's will flowed into an organisation of design, only impelled by inherent omniscience and constitutional spontaneity. Or, in the words of the Upanishad

न तस्य कार्यं करणं च विद्यते

न तत्समो नाभ्यधिकश्च दृश्यते ।

परास्य शक्तिर्विविधैव आयते

स्वाभाविको ज्ञानबलक्रिया च ॥

The Great Eternal Spirit undergoes no such limitations requires no instruments to work with, has no equal, nor any superior. He is the Supreme Principle. He is endued with infinite omnipotence, omniscience and omnivisibility. As he does control the circulation of the blood, the respiratory functions, and the recuperative processes are all carried out with greater regularity precision, and uniformity only by virtue of the more constant of the gross soul with its body requiring neither to feed, nor drugs, but the more spontaneous activity of the soul so in the uniting phase God viewed as exerting conscious omnipotence and omniscience, with the greatest regularity precision and perfection without the exercise of stimulus or of brain-absorbed drugs but by the spontaneous working of the eternal self intelligent principles and ideas, whose embodiment He is. From this belief in the spontaneous activity of the Divine Mind, there flows a soul-consolation; for this belief, instead of generating fatalism or the evils of pre-determination, creates strong faith in the inherent wisdom of the self-intelligent principles embodied and condensed, to its spirit in Godhead.

Or to approach the subject in another way let us consider the process whereby the bodily eyes are made to perceive external objects. The organ of the eye has been likened to a camera obscura, its aqueous humour crystalline lens and vitreous humour supplying the place of the reflecting lens, and the retina playing the part of the plate of ground glass in the ordinary camera. Just as focusing is necessary for a clear image of the object

being formed, so the appended membranes in the organism are the focussing apparatus whereby the eye is adjusted to any desired distance. The organ of the eye, therefore considered merely as an organ, possesses the power of seeing no more than the camera of the photographer. At the back of the camera stands the photographer who adjusts the lenses, takes the image and perceives it. So is it with the human eye. At the back of the physical eye resides the principle of visual perception, at the back of the ear, the principle of hearing, and so at the back of each sense, the true principle of corresponding sensation. When man has 'shuffled off this mortal coil,' he is no more 'destitute of these principles of perception and sensation than is the photographer destitute of the power of vision without his camera obscura. The human spirit is the *true embodiment* of these principles. So is it with the Divine Spirit. He is the true embodiment of all eternal, unchangeable principles, residing at the back of all form or organisation and independent of it, and standing at the foundation of all design. He is, in fact, the Supreme Eternal Omnipresent Spirit, of whom the Upanishad says—

अपाणिपादो ज्वनो प्रहीता

पश्यत्यचक्षुः स शृणोत्यकर्णः ।

स वेत्ति विश्वं न च तस्यास्ति वेत्ता

तमाहुरग्रा, पुंश्व पुराणम् ॥

He has no physical hands and feet, but without hand or feet grasps and moulds all matter by virtue of the inher-

erupts against Omnipotence and Omnipresence. He has no physical symbol. He is not all, metaphysical one, but He knows all, as universal organ of thought, but He knows all, and is Himself Unknown. He is the Supreme Spirit that pervades All. God is, therefore, viewed in this phase as Himself an embodiment of all ideas and form *per se*. This is the 5th entering phase, the state of the 5th letter M, composing the monosyllabic Om.

The fourth, a dyadon which is no motto or letter nor even uttered or spoken but is the true *I am I*. It represents the Eternal Presence, the true Atom, the Divine Spirit like a subtle & imperishable Undeclinable Unthinkable Unknowable Being, only conscious of Self in Self, is the Absolute of the Unconditioned, without a trace of the relative or the conditioned world about Him, All-in-all, All-but-one. One and only He should be known.

It's about better than this interesting though imperfect and necessarily brief exposition than in the words of Presbyter and 5th Presbyter—

एतद्देवस्य काम परदायकं सद्यः यदोद्धारस्त

O' truthful inquirer, Om is the Great God. Wise men attain the object sustained by this Om. He who contemplates *As*, the 1st *matra* of Om, i.e. contemplates God in the 'wakeful' phase, soon becomes wise, and even

PECUNIOMANIA

—o—

UNDER this head, we propose to deal with the question: "how far the pursuit of wealth is a healthy pursuit

Says Manu, II. 13—

अर्थकामेषु सत्त्वानां धर्मं ज्ञानं विधीयते ।

धर्मं विज्ञो ममानानां प्रमाण परम श्रुतिः ॥

It is only those who stand aloof from the pursuit both of wealth and of carnal pleasures that can ever obtain a knowledge of true religion. It is the duty of every one who aspires after this object, to determine what true religion is by the help of the Vedas, for a clear and perfect ascertainment of true religion is not attained altogether without the help of the Vedas.

In the verse quoted above, Manu maintains three propositions, firstly, the opposition of *artha*, or pursuit of wealth, to the acquisition of true religion, secondly, the opposition of the pursuit of carnal pleasures to the acquisition of the same, and, lastly, the advisability of the study of the Vedas for those who would make their it business to investigate true religion.

The first and second propositions of Manu may be regarded as one, for the pursuit of carnal pleasures is in the majority of cases, so interwoven with the pursuit of wealth that it is generally impossible to command the gratification of the former without a previous inordinate accumulation of the latter. We take, therefore, the first half of the verse of Manu to mean that an inordinate pursuit of

"We are greatly stirred, at times, as this fraud or that scoundrel is dragged to light & there rise cries and moans over the corruption of the times, but my friends, these frauds and these scoundrels are not the corruptions of the times. They are the mere pustules which the body politic throws to the surface. Thank God, that there is vitality enough left to throw them to the surface. The disease is below all, infinitely more wide spread.

"What is that disease? I believe that it is first of all *indifference*—indifference to truth as truth, next, *scepticism*, by which I do not mean inability to believe this or that dogma, but the scepticism which refuses to believe that there is any power in the universe strong enough, large enough good, enough to make the thorough search for truth safe in every line of investigation, next, *infidelity*, by which I do not mean want of fidelity to this or that dominant creed, but want of fidelity to that which underlies all creeds, the idea that the true and the good are one, and, finally, *materialism*, by which I do not mean this or that scientific theory of the universe, but that devotion to the mere husks and rinds of good, that struggle for place and pelf, *that faith in mere material comfort and wealth* which eats out of human hearts all patriotism and which is the very opposite of the spirit that gives energy to scientific achievement *.

Here is an eminent man of science complaining that the society is at present pestered with four fatal diseases, *indifference, scepticism, infidelity* and, finally, *materialism*. And the cause of all this is evidently the *modish worship of mighty matter and money*.

In order that this truth may be more easily brought home to the earnest reader, let us cast a look upon the large number of lawyers, physicians, capitalists, tradesmen, engineers, contractors, clergymen, educationists, clerks, and other life draggers in the innumerable fashion

President White's address, appendix to Lectures on Light by J. Tyndal, Third edition 1882, pp 233-239

able professions of the day to take man out of our own country and whose main object, in carrying the very professions they hold is the hoarding of the thing good and sterling in the jaundiced eye of the competition sick *material* man. It is in vain that we see the rational expectation of the existence of these hoarding professions on the ground of benevolence or of eternal usefulness. That is a sick law, if they bring these professions would have sprung into this net. They do not burn and bury so thickly on a heap of sugar as do lawyers and brewers, physicians and contractors : the whole of us say. It is literally true that money is the God that is more worshipped than the God of Nature.

Nor is that alone money being the pursuit of almost all. Nay it is the topic of topics. There is the well styled reformer bewailing over the extreme *poverty* of his country over the consequent misery, sin and crime that prevail. He is awfully pained to see that sins do not flourish in his country. By long and strenuous efforts, he succeeded in establishing an institution that might have richly improved the resources of the material prosperity of his country ; but his disappointment is past all description at the fact that the institution is soon doomed to starvation. Thus meditates the reformer in his solitary woods.—our country is poor. Laze is we have no wealth ; sin and misery prevail, because we have no wealth. Sins cannot flourish, because we have no wealthy institutions cannot live long and succeed, because we have no wealth. From all sides is the ambitious reformer repelled towards the problem of wealth. He employs his gigantic material

intellect to the solution of this problem. Individual enterprises alone can render his country wealth, but how can individual enterprises be undertaken without money? Perhaps, there is another solution. He would introduce machinery into his country, and that would yield rich harvest of wealth and opulence. But machinery is costly and a poor country cannot buy it. Or, perchance, our reformer is a *protectionist*. He would not import machinery or foreign improved modes of carrying on industry, but would encourage and foster native manufactures. Unfortunately for our reformer, unwise human nature is mad after cheapness, and competition fells, with its direful axe, the structure of *protection*, so carefully raised by the reformer.

There is the materialistic philosopher. What a charming thing is civilisation! In accordance with his superficial modes of philosophizing, he analyzes civilization to rest upon wealth. Steamers and locomotive engines, telegraphs and post office arrangements, printing presses and labor economizing machines would vanish into mere coal, iron and sand—fruitless articles—without the mighty, labor sustaining hand of wealth.

Not is this the case with the reformer and the philosopher alone. The politician, the statesman, the newspaper writer, the public lecturer, each in his turn, is hurled back upon the problem of wealth. And thus the world, in its talks and conversations, lectures and public meetings, private meditations and silent reflections, echoes and re-echoes "MONEY," till the whole fabric of society

begins to reverberate and the atmosphere is filled with phantoms of a like nature.

Reader carefully observe the ephemeral bands and transient activity of the so-called civilized society. Do you not note that at least seventy five per cent. of the phenomena, that find their way to publicity in the civilized world, owe their origin to the love of power love of enjoyment (i.e. of pleasures of sense bought), love of honour love of superiority love of fame, and love of display? Why is it that the master extracts obedience from his servants? Why is it that men always desire to move in circles of society higher than their own? Why is it that so many *rajas* and *regals* would willingly incur or maintain useless royal expenditure, but to win mere empty titles of *Rajah* or *Raj Bahadur* or *Sardar Bahadur*? Impelled by insatiable love of power or love of superiority love of honour or love of display or love of enjoyment? And where is the mighty engine to manufacture means for the gratification of these badly inordinate, selfish loves? It is MONEY.

Again, go into the lower strata of society (by lower I mean lower socially though not necessarily sexually) and see what part the feelings of jealousy anger envy rivalry and competition play in that blind rush of living forces, called civilized life. The constantly increasing litigation, the strikes and feuds of nobility the corruptions of court and police the life sucking exhaustion of competitive candidates—all bear testimony that the society is at present deeply agitated by wretched feelings of jealousy envy rivalry and competition, so unbecoming of man

Where would you find the man, who through benevolence of nature would restrict the operation of vengeance or anger? In the civilised society, hardly any! Perhaps the poverty-stricken, misery-laden wretch, who has not the means to practice the dictates of his rebellious nature, but has only the misfortune to be subject to disappointment and melancholy, may be found, here or there, dragging his life with impatience and restless nightmare. O, if he had the power to wreak his vengeance upon oppressing civilized society! Does not all this, again, appeal to the potency of mighty MONEY?

Imitation is the grand principle upon which society is at present constructed. Imitation is the *fulcrum* upon which hinges the mighty lever of society. Not to speak of custom, fashion, dint of beaten groove, fear of idiosyncrasy, all of which spring in one way or other from the parental principle, *imitation*,—even in matters of religious belief, or in the department of opinions, ninety per cent. of the inhabitants of the world are swayed by the influence of the same all pervading principle, imitation. Speaking of the same ape like faculty of Imitation, J S Mill says—

‘In our times from the highest class of society down to the lowest, every one lives as under the eye of a hostile and dreaded censorship. Not only in what concerns others, but in what concerns only themselves, the individual or the family do not ask themselves—‘What do I prefer? or, what would suit my character or disposition? or, what would allow the best and highest in me to have fair play and enable it to grow and thrive? They ask themselves, what is suitable to

rivalry and jealousy, all supplicating PLUTUS, to bestow them means of their gratification, can one see all this, and yet not swear fealty to the sovereign power, GOLD?

By dint of imitation or example, man is pushed from right to left to seek MONEY. Society is a whirlpool, wherein are caught all swimmers on the current of life, then tossed with violence hither and thither, now hurled this way, and then, the other,—till man is no better than a *'money making machine'*

Is not this state of society deplorable?

See, what a wreck of nobler feelings, this *love of money* makes. Duty clashes with interest. Evils are shielded under the suppressing power of Mammon. The dictates of higher human nature are cruelly set aside and trampled under feet? Physicians, instead of disseminating the knowledge of physiology, and making the laws of health public, disguise even simple diseases and medicines under the garb of foreign names, & the modes of their preparation, under the mysterious symbolism of prescriptions. Instead of the numerous host of physicians, now existing in the country, wisely administering to the destruction of disease and blooming of cheerful health, their earnest prayer, every day, is, that men endowed with purse and power to pay, should fall sick oftener, and suffer more frequently. Lawyers, instead of breeding feelings of peaceful friendship and encouraging reconciliation, encourage feud and strife, and fan the flames of haughty pride or revengeful animosity. Tradesmen, instead of administering to the wants and needs of the people, and regulating with justice the law of demand and supply, get

all they can and give as little keep them trade secrets secret or patented, and delude the ignorant consumer with adulterated materials. Even the preacher or the clergyman, whose business it should be to bestow consolation of simple truth and morality and to shed the sacred blessings of religious piety and spiritual light even to the grand meanest and ignominious of winding up his lengthy glowingly affected hypocritical sermons with a mysterious nonsense, which he himself does not and cannot understand.

It is not thus alone that urged by the society born instinct of hoarding money the physician and the clergyman all alike are led to the perversion of their duty and avocation. More serious still are other evils into which the society is plunged but in the possession of wealth. There is the rich wine dealer or the opium, tobacco or opium seller suffered to live and flourish by his trade in society and no one ever cast a look of disapproval at him simply because he is rich. There are thousands of poor innocent people charged with crimes they never committed, and are punished but the wealthy culprits, armed with bribe or corruption, influence or intercession, escape with impunity. In spite of the inspiration of the poet and the philosopher to the effect that all mankind are kin, in spite of the weak whisperings of pure religion that all are children of one common Father is the wealthy class fostering inequality by its constant aggressions, oppressions, injustices and tyrannies, inflicted upon the weak and the poor. Under the strong infatuation of money even the graduating student forsake

his tastes and inclinations if he has any, and although fully confident of his intrinsic unfitness for the profession he chooses, he rushes into medicine, law, engineering and service, and floods the world with the consequences of his iniquitous calling. And the newspaper writer, who is never ashamed of calling himself the leader of public opinion, without a pang delivers up his conscience, and feeds the vanity of the party that supports him. Read the degenerate newspaper literature—for newspaper literature is seldom reforming, regenerating or elevating—and you will see, how little is devoted to sound advice, true leadership or to the cause of *justice* and truth, and how much to party feeling, sentimentalism, race prejudice, selfish bias, and wilful misrepresentation. All benevolence and disinterestedness is affected for mere show and ceremonialism, and in truth and in heart, exchanged for base selfishness and combatant sectarianism. Is this humanity?

The conclusion that irresistibly flows from the above considerations is that the '*love of money*' is now-a-days a disease, a form of insanity. Modern science of pathology would be imperfect and incomplete without a record of this discovery of the widest prevalent disease, that at present infects society and saps the very foundation of morality and religious feeling.

This disease is to be styled 'PECUNIOMANIA', for, like all other forms of insanity, it produces destruction of mental equilibrium and generates incoherency. 'of thought', it communicates an irrevocable bias in one direction, withdrawing the human mind from all other

eland is of activity and ever as a d last I created
 a more excited condition of the whole system, incompatible
 with the creation, or even the exercise of notions
 Like many contagious diseases, cholera & d like, it
 spreads its germs of destruction most profusely and
 most widely & is easily caught by the susceptible or
 organisation of man And like hereditary diseases, this
 is also easily transmitted from father to son from brother
 to brother and from companion to friend. Hence,

*The manner of death of the type of society is con-
 tagious & amissible by the act of the individual or by
 the act of the most recent type*

In order that the appreciating reader may have no
 difficulty in diagnosing the disease we give below its
 most remarkable symptoms. Its symptoms are — insat-
 iable thirst, or ambition always a hungry stomach; a
 phlegmatic (filled with indifference) & splenic (pervasive)
 temperament extreme sensibility and irritability;
 strong heart-burn of animal & inhuman passions
 restlessness, anxiety & restlessness; loss of pride power
 and feverishness; paralysis of moral and spiritual faculties,
 insensibility to impressions ultra-sensuous & not physical
 extreme proneness to overfeeding over-clothing
 dolence luxury and comfort an assumed air of superiority
 indifference personal weakness and infirmity

And now we will ask the serious reader whether
 in the name of truth, justice and goodness, disease that
 reader man name — a disease is that suffers all meta-
 physical, looks down upon all thoughtful reflection, or
 philosophy and dwards all theology as *apocryphal* un-

practical, and absurd,—a disease that stigmatizes all efforts to ennoble & elevate man and morally, rationally & spiritually as *theoretical*,—a disease that pronounces self-knowledge as impossible—a disease that brings morality down to the level of expediency,—a disease that, instead of the worship of God of Nature, sets up a worst & most wretched form of idolatry, the worship of copper, silver and gold—a disease that denies to man the possession of any nature other than the one capable of eating, drinking and merry making we again ask, whether such a disease should not be at once uprooted, destroyed, and burnt never to grow again? For, so long as this disease exists, there shall be no morality, no religion, no truth, no philosophy

The law of the influx of religious ideas is sound mind disinterested truthful temperament, composed & tranquil attitude, powerfully persevering intellect and concentrated meditation. And it is the foundation of these very conditions that the headlong pursuit of money undermines. The anxiety and pride, which the possessions of money invariably brings, rob the mind of its composure, and the complicated relations and interests which the possession of power (wealth is power) always engenders, even takes away the iota of disinterestedness or truthfulness that may have been left, till, restless through anxiety, turbulent through pride, and blinded through interest, man loses both the power of concentration and of clear thought.

How elevating and dignifying is independence, true, real independence, where man is no more a slave of his

surroundings and circumstances, but a man. And yet
 there is nothing that does more violence to the growth
 and existence of this beautiful condition in man than the
 possession of wealth. A man proud of wealth is invariably
 aware of his wealth. A healthy man is always in
 enjoyment of his health. He feels the consciousness of his
 power and is legitimately proud of the independence he
 feels in the exercise of his power. He exerts his loco-
 motive apparatus, whenever he desires change of place
 or scenery; he takes to physical exercise whenever he
 desires restoration of strength and vigour; he goes on a
 walk to breathe the fresh air of heaven or to enjoy the
 scenery of nature whenever he desires refreshment; he
 entertains elevated thoughts and purges his mind out,
 whenever he desires to feel as a true man, knows all;
 and he rouses the dormant conservative forces of his self-
 healing nature, whenever disease or extremes of heat
 and cold attack him. In short, he is amply provided, in
 himself with whatsoever he needs. But the rich man is
 altogether dependent on the ministrations of matter—conveyance
 by muscular action; pethoris fulness, borrowed from the
 activity of drugs, or the ministrations of attending phy-
 sicians, instead of internal healthy glow; rich winds but
 impaired digestion which wrongly needs the stimulation
 of the Hæmor to perform its function. Instead of simple
 diet and healthy stomach; dead photographs and mute
 portraits hanging by the walls of his rooms, instead of
 the scenery of nature; entire dependence upon the cool-
 ing power of Ammonia, and the warming properties of
 fire, refreshing power of beverages, and stirring influence

of vines, instead of natural endurance. Is this the *independence* which a human being should feel?

It is not to this extent alone, that the effects of this tendency have extended. Modern civilisation,—a phenomenon, mainly due to the chameleon like properties of wealth—is brimful of the illustrious consequences of this tendency. The ancient world produced barbarians and savages, because, they were gigantic specimens of human nature, living almost naked in caves or mere huts built just for a temporary protection from wind and rain. because, their wants being few, their arts were simple and not numerous. because, possessed of wonderful memories, their knowledge was all they learned by rote, and their reference books or library, the infallible record on the tablet of their memory, because, possessed of a clear head, their illustrations were so simple and common that their reasoning must appear as shallow. because, being penetrative, they reasoned by analogy, and therefore they knew *observation* only. In short, they were men quite different from what the modern world produces. The modern world produces *civilized* men who are 'starved specimens of human nature', their architecture is grand and more permanent, their arts are complex and more numerous, their memories are for reference, and more faithless, their libraries are unportable and more cumbersome, their illustrations are heavy and unique because they have been bedrugged as scientific by a process of baptism in unintelligible, classical and technical phraseology. Their reasoning is inductive, their test is experiment, and their logic is the theory of probabilities.

with contempt, the little hard indigestible shining bits of metal, known as coinage, for there is no liberty, genuine independence and dignity outside the exercise of these moral faculties of the mind. Mind is everywhere the regnant principle. The *furious* lion, the *gigantic* elephant, the *ferocious* tiger, the *howling* wolf, the *blood thirsty* hound, have been *bowed* down by the subduing power of the *superior* mind of man. The wild beasts of the forests have been tamed and rendered docile. The solid rocks have been compelled to part with their quarry the depths of the earth have been forced to yield up their locked in treasures, the mighty rivers have been made to change their course, the cataracts to give up their impetuous force to the whirling machinery, the water and fire have been driven to drag thousands of tons of loads every moment, at the tremendous rate of 40 or 50 miles an hour, and even the electricity of the heavens has been imprisoned by pointed conductors all this, *under the guidance and control of the superior mind*. Nor has the material universe, or the animal kingdom alone, been thus vanquished by the power of the mind. Even arbitrary royalty, powerful oligarchy, the aristocracy of nobility (of blood), and the pride of heraldry have been thrown down and surrendered by the democracy of reason, 'the monarchy of mind,' 'the republic of intellect'. And further the pride of aged pedantry, hoary with age, has cast off its self-assumed importance, and learnt lessons at the feet of *superior*, though *young* minds. Even the industrious dexterity, and skillful ingenuity are bowed under the swaying omnipotence of *new ideas*.

It should, therefore, be clearly borne in mind that the richness of mind, is the true riches. It is an inexhaustible wealth that deserves the greatest attention and highest reverence. Physical, material wealth will be the poorest thing in our estimation.) Manu—

वित्तं बन्धु वयं क्षम्यं विद्या भवति पंचमो ।
एतानि साम्यस्यानाति गरीया यद्यदुत्तरं ॥

With nobility of blood, age, professional skill or honest industry and knowledge (the wealth of mind) these are the first things to be respected the one following more than the one preceding it. This truth has been amply illustrated in the remarks made above concerning the superiority of the mind. The conclusion to be cherished is that the possession of *wisdom* is the best possession, and that it is *superior* to all (as contradistinguished from the pursuit of wealth) : *the pursuit* that is becoming of the nobility of human nature. Mind is the true source of power : ideas (or knowledge) are the true wealth, before which all else crumbles to dust, to rise no more. Says the Upanishat—

आत्माना विन्दते शीघ्रं विद्याया विन्दते ऽमृतम् ॥

True power comes from the spirit and immortality from the possession of ideas

EVIDENCES OF THE HUMAN SPIRIT

HOW painful is *ignorance* Patanjali says that ignorance is the only soil where evils can grow & germinate * And so it is All the evil of this world is the result of *misdirection* of natural forces, ultimately traceable to *ignorance* Nowhere is ignorance however so baneful as when it appertains to the ignorance of one's own self Under the stunning effect of ignorance people imagine themselves to be deprived of their own vital essence. And the so called theologies of the world, no less than the materialistic objective externalism of the day, are busy in propagating scepticism, and even downright nihilism, on the subject As a matter of fact, more is due in this direction to the pious teachings of the so called religious world than to the sincere and logically-arrived convictions of philosophers and scientific men The conclusions arrived at by sincere investigators & unprejudiced, unbiased reasoners, are, at the worst, only doubtful and fluctuating They terminate in the confession of a mystery, or of some indefinite relation between mind and body But our wise theologians of all religions go further Their assertions are positive, dogmatic, and leave no room for doubt. The pious missionary, who believes in the perfected political religion of the western world, i.e. popular Christianity refined, returns this unequivocal answer to the query—What is human spirit? "And the Lord God formed man (Adam ?) of the

* Yoga aphorism, ii 1

Once admit that the human spirit is not a substance, or an entity, as real as palpable matter, (nay it is more real), once admit, like Bauddhas, that human life is but an evanescent spark, passing off like a transient meteor in the sky, or, like Christians, that it is a mere breath, or like modern subjective evolutionists that 'spirit' is only a conception inherited by the civilized races from their savage progenitors, who formed it, misled by the delusive phenomena of dreams, wherein a savage is represented to dream a friend coming and talking to him, whereas on awakening, he finds that the friend is nowhere, thus giving to the savage a notion, that every human being must have got a corresponding invisible second self, that appears in dreams, but is not tangible, once admit the airy nothingness of the human spirit, and down goes with it the whole fabric of all religion and morality. Can *supernatural* Christianity, with its *gratis* scheme of salvation, be based upon this sand foundation of spirit-notion? O vain Christian! wipe off your theology and your scheme of salvation, for there is no human spirit to be saved. That which you would save, is but a phantom, a mere breath. It is no substantia lity. And ye Mahomedans! get rid of your doctrine of prophetic interposition, for interposition will only save a phantom, that has already disappeared, or would perhaps be destroyed the next moment. And all ye, who believe in the generation^o of human spirits, let in its creation out

* "Generation, progress and eternal existence are the characteristics of soul." Brahma Samaj Tracts, Sad dharma Sutram translated by Navina Chandra Rai, Chapter III, Sutra, 35

of nothing by the fiat of the Deity understood that what sprang into existence out of nothing will fall back into the chaos out of which it sprang and be resolved into nothing!

This superstition, or enumeration of the immensity of spirit is not confined to the province of religion alone. It has begun to permeate through the cultured world, till it has reached the range of scientific speculation.

The mechanical theory of the universe undertakes not only to account for all physical phenomena by describing them as variations in the structure or configuration of material systems, but strives even to apprehend all vital and physiological phenomena by reducing them to the elements of mass and motion. Thus Huxley speaking of physiology says, "The new idea has now become dominant (a physiology) and is ordinarily designated as the mechanical or physical law. Its origin is in the causal conception long prevalent in the broader department of natural science which regards nature as a single chain of causes and effect wherein the ultimate laws of causal action are the laws of mechanics. Physiology thus appears as a branch of applied physics, its problem being a reduction of vital phenomena to general physical laws, and thus ultimately to the fundamental laws of mechanics." Again, says Professor Haeckel in clearer terms, "The general theory of evolution assumes that in nature there is a great vital, continuous and everlasting process of development and that all natural phenomena, without exception, from the motion of celestial bodies and the fall of the rain, to

stone up to the growth of the plant and the consciousness of man, are subject to the same great law of causation—that they are ultimately to be reduced to atomic mechanics” Not this alone, but Haeckel further declares that this theory “is the only scientific theory which affords a rational explanation of the universe, and satisfies the craving of the intellect for causal connections, inasmuch as it links all the phenomena of nature as parts of a great unitary process of development and as a series of mechanical causes and effects” † Working under the charms of this mechanical theory of the universe, Dr. Buchner, in his “Matter and Force” denies even existence to psychology or subjective philosophy. Many regard matter and its chemical workings as sufficient to account for all force and all mind. The notion of personality, immortality or independence of matter are again discarded by some as superstitious and absurd. Thus it is with philosophers and scientific men, who live from day to night in dread of utter annihilation.

Notwithstanding the fact that such materialism has long prevailed and even now prevails in the strongholds of Science and Religion in Western countries, it is remarkable to note that there have been from time to time men who have fearlessly explored the regions of nature and made attempts at understanding and stating the bare truth.

Deep researches in physiology have revealed the facts that the human organisation is endowed with a self-conservative energy. And physicians and medical men in

† Stallo's Concepts of Modern Physics, pp 19—20

ferred to the action of known physical or chemical laws, and which therefore temporarily, at any rate, we must term "vital" °

It has also been maintained that there is a plastic carbon-compound, called protoplasm, composed of four inseparable elements—Carbon, Oxygen, Hydrogen, and Nitrogen,—which is the physical basis of life, and consequently very often the doctrine of organisation genesis of life has been urged. But to do justice to this physical basis of life, it must be remarked that although the presence of these four elements apparently fixes it as a physical basis, yet, that it possesses always a definite composition, is very much doubted. "It has not yet been shown that the living matter which we designate by the convenient term of "protoplasm" has universally and in all cases a constant and undeviating chemical composition, and indeed there is reason to believe that this is not the case" † Furthermore, in consideration of the vital phenomena presented by the lowest animals, scientific authorities have been obliged to confess that organisation is not an intrinsic and indispensable condition of vital phenomena. Speaking of *Amœba*, remarks Professor Nicholson, "This animalcule which is structurally little more than a mobile lump of semi fluid protoplasm, digests as perfectly—as far as the result to itself is concerned—as does the most highly organized animal with the most complex digestive apparatus. It takes food into its interior, it digests without the presence of a single organ

* Nicholson's Manual of Zoology, 6th Edition, page 7

† *Ibid* p 9 note

kingdom which more admirably illustrates a very well founded doctrine, and one which was often advocated by John Hunter, that life is the cause and not the consequence of organisation for in these lowest forms of animal life, there is absolutely nothing worthy of the name of organisation to be discovered by the microscopist, though assisted by the beautiful instruments that are now constructed. In the substance of many of these creatures, nothing is to be discovered but a mass of jelly, which might be represented by a little particle of thin glue. Not that it corresponds with the latter in composition, but it has that texture and sort of aspect, it is structureless and organless and without definitely formed parts. Nevertheless, it possesses all the essential properties and characters of vitality, it is produced from a body like itself, it is capable of assimilating nourishment and of exerting movements. Nay, more, it can produce a shell, a structure in many cases, of extraordinary complexity and most singular beauty.

"That this particle of jelly is capable of guiding physical forces, in such a manner as to give rise to those exquisite and almost, mathematically arranged structures—being itself structureless and without permanent distinction or separation of parts—is, to my mind, *a fact of the profoundest significance*."*

The irresistible conclusion to which the above leads and which Haeckel also holds, is that the forms, of their

* An introduction to the classifications of animals by Thomas Henry Huxley LL.D.F.R.S., London, 1863, Page 10-11

organism and of their representative in the human body
 be." It is clear then that whatever may be
 called, his mind is not representative of the
 external world. It is not a mirror of the
 external world, modern science would have said
 it is with a dynamic physiology of the mind
 like. It is no more a mere passive product
 of organs or matter. It is rather a self-acting
 dynamic system, a reality in itself, to the
 mind, creates growth. It is a dynamic
 making better, feeds, grows, learns, and
 finally, overcomes a desire for it. The
 noble condition to which philosophy has
 led sincere investigators and philosophers here in western
 countries. Thus it is that they have been compelled to
 admit a reality (call it matter as it will please you)
 yet, a reality which the ancient philosophers of the east
 styled *Atma*.

If we have purposely avoided mentioning ancient eastern
 authorities on the subject, it is for the plain reason
 that India of the present day derives its intellectual
 activity, faith, belief and conviction mainly from civilized
 occidental England. Had we in the very beginning
 called evidence from ancient Sanskrit authors just to
 prove even these very positions literally there is no doubt
 that these remarks would have been what tallingly pro-
 nounced as superstitious, whimsical unscientific and old-
 grown; although, even after the best evidence from
 western authors on the subject has been collected, there
 is not to be found that systematic, exhaustive enumera-

tion of evidence which is the characteristic of a settled or decided opinion

To come, however, to the proper subject, "Evidences of the human spirit from the standpoint of *Vaisheshika* philosophy." As already pointed out, the ancient philosophers of Aryavarta styled this *vital-principle Atma*. It is to be remembered that *Atma* is one of the nine *dravyas* of the *Vaisheshika* philosophers. A *dravya*, in *Vaisheshika* philosophy, is something in which attributes and actions inhere,^o or what in English philosophy would be called a substance, or better still, a *substratum* or a *noumenon*. It is clear, then, that *Atma* is a reality, one of the nine noumena of the universe, a substance in which attributes and actions inhere.

Let us, therefore, divest ourselves of our previous notions concerning the human spirit, so that we may the better understand its nature, according to this philosophy. English metaphysicians having generally regarded the human spirit as an immaterial nothing something, have been unable to offer any explanation as to how the mind knows the external universe and acts on it. Regarding the human mind as they did, as altogether immaterial, i. e., as divested of all the properties of matter, even of the substantiality and extension or space occupation of matter, they found their intellects compelled to halt, when the problem of the cognition of the external world

“क्रियोगुणवत् समवायिकारणमिति द्रव्यलक्षणम्”
Vaisheshika Sutra I. 1. 15

for, the difficulty still remains as to how the altogether immaterial mind can perceive the material and therefore external impressions on the sensorium

Some philosophers have maintained that Divine interposition is the only means of getting rid of this difficulty. They, therefore, theorize that the Divine Being, the Spirit of God, through omnipotence, works out the material phenomena of nature in the physical external world on one hand, and corresponding internal mental changes directly in the world of mind, on the other, that thus, we are every moment conscious, not of matter and material phenomena, but of corresponding mental phenomena, existing independently by the direct working of the Divine Will. It is needless to say that this theory, instead of explaining the cognition of the external world, cuts short the Gordian knot by utterly denying the very existence of any such cognition at all. It not only robs us of our cognition, but robs us of the very external world itself, for if we be not conscious of the external world, but of mental changes only, say, correspondingly worked out by Divine interposition, what proof have we that any such external world exists?

This difficulty of explaining the cognition of the external world becomes augmented still further, when we come to consider the parallel and correlate question of the action of the human spirit upon matter. Here, may lie a heavy mass of iron, say, 20 seirs in weight. At the command of the spirit, the arm rises, and the weight is lifted up. Here is another mystery to be explained. How can the altogether immaterial spirit lift up the altogether material and external weight of twenty

retire? Replies the impatient reader the weight is moved in consequence of the movement of the head-Bar who moved the equally material hand? One may go a step farther and say that the *feeling* was accomplished by a regular contraction of the muscles, but the muscles are material still, and the question still remains, Who contracted the muscle? Here the vain physiologist may say that there passed a nervous current from the brain and straight contracted the muscle. But the question still flutters before the crowd, What stimulated the nervous current? You answer the will of the spirit. And here lies the question of question, How could the immaterial spirit stimulate, by his immaterial will the solid, white fibres, fleshy material nerves to yield up their nervous fluid and contract the muscle? It is plain, then, that there can be no escape from the last riddle and whence this riddle? Clearly enough from the pre-conceived erroneous notion that the spirit is an altogether immaterial airy nothing, phantom like, or breathy something.

Once admit as the *Cartesian* philosophy teaches that the *Animal* human spirit is at least as good a substance as matter, as good a substance or substratum, as ordinary external object are possessed of and it will be clear how substance can act upon substance or be impressed by substance. This peculiar substance *Animal* is the seat of two grand manifestations, the voluntary and the involuntary. The voluntary or conscious functions of *Animal* are the functions called cognition, feeling and will, also called *Intellect*—consciousness, *Sensus*—feeling of pleasure

dukkha—the feeling of pain, *ichchha*—desire, *dvesha*—repulsion, and *prayatna*—conscious exertion. These voluntary functions of the spirit have formed the basis of discussions of all metaphysicians who have ignorantly or wilfully neglected the treatment of the other set of functions—*pranapana* or respiration, *nimesha* or nictitation, *jivana* or physiologic building and animation, *mana*, or sensation, *gati* or movement, *indriya* or activity of the senses, and *antaravikara* or organic feelings. The result of the separation of these two sets of the functions of the spirit has been that schools of metaphysicians and scientific men have been set up in conflict with each other, both denying the substantiality of the spirit. The metaphysicians deny the substantiality of the spirit, evidently on the ground that sensations, feelings, wills, desires and ideas, perceptions and cognitions have no independent existence of their own, but seem to be manifested only in organised structure. There is besides a tendency among metaphysicians to regard whatsoever is internal or mental as imaginary, or as phenomenal but not as real or substantial. Hence dealing as they do, with the departments of feeling, cognition and will, they regard the mind no more real than its phenomena. Had they also recognized the involuntary functions of the spirit, they would have readily perceived that the *real* something which produces such tangible, real phenomena as the building up of structures or the animation of organism, or which produces motion and the co-ordination of motion, is the reality that sentiently feels, knows and wills.

On the other hand the scientific world has been prone to drag itself steadfastly to some from the opposite ground, that their external phenomenal researches into the functions of organisms could only reveal to them at the best the involuntary processes of the spirit and that it could not otherwise happen. For the whole material world, from the psychologist's point of view is merely objective existence. The human spirit is the only substance that is both objective and subjective at the same time. The scientific world, owing to its materialism and the deep-seated tendency of only depending on sense testimony have only sought the objective side of the human spirit, and have therefore landed themselves into a quibbling which denies the subjective side of the human spirit.

By finding in the involuntary tendencies of the spirit anywhere outside of organic matter—for them, they would not be manifest they have desired to consciousness an independent substratum. For it is to them more agreeable and uniform, to regard life also as one of the forces, and since consciousness has no place in this list of forces, it must be the apparent, illusory result of the most complicated working of natural forces. To them, matter with its chemical affinity is all-a Scientist had both sorts of functions, voluntary and involuntary of the human spirit, best simultaneously viewed, as dark matter would have embodied the realm of mind. It would have been perceived that the human spirit, in performing what are called the involuntary functions of the mind, behaves just in the same way as different elements of matter do. The spirit too, with its inherent chemical

affinities and dynamic activities, attracts and repels blood from the heart, air from the lungs and nervous currents or electricity from the brain. This double phased existence of *Atma* is the subject of the quotation from the *Frashastapada Bhashya* of Gautama, which we have placed in the beginning of our brief review. A rough and almost literal translation of the passage is herewith subjoined —

"The next substance is called *Atma*, as it is endowed with the property of circulating itself freely in the organism. On account of its being a refined and subtle entity, it is *imperceptible* by the senses, and, hence, its existence has to be inferred from the harmonious play displayed by such instrumental organs as the eye, the ear, &c., for it cannot be doubted that the organs are merely the instruments which, like all other machinery, require an *agent* to work them up. When, besides, the nature of sounds, colours, tastes, &c. is well admitted to be *cognizable*, the existence of the *cognizing being* is a natural inference. This cognizing being cannot be the body, the organs,* or the *manas*†, the soul or spiritual body, for

* By the word 'organ' is here meant, the '*Indriya*' or the senses. The '*Indriyas*' are the invisible organisation of the spirit as distinct from the visible organs wherein these spiritual organs or powers reside.

† Man is viewed in Sanscrit philosophy, as a compound of three entities. 1. The gross physical body, called the *sthula*, *sharira*. 2. The spiritual body, here called the *manas*. It is an organisation of life and sensation principles and is a fine imperceptible intermediate connecting link between the gross material body and 3. the internal spirit who is the true man, the central reality that does, feels, enjoys and is conscious. One of the consequences flowing from this organisation of the *manas* is that it is impossible for the spirit to be cognizant of two impressions at the same time,

The primary inference with respect to the human spirit is that of a *controlling being*. When the driver, by the exertion of his muscular power, turns the reins of the horses that pull the carriage, on one side, or on the other, the carriage obeys the motion, and forthwith rolls on to that side. Now a similar turning of the activities of the body, called *pravritti* and *nivritti*, i.e. application to what is deemed pleasurable, and voluntary withdrawal from what is deemed painful, is perceived to take place in our bodies. Our bodies are thus like a carriage, the driver, *Atma*, regulating by the reins he holds, at his will, the *pravritti* and *nivritti* of the body. Our second inference with respect to the human spirit is that of a *blacksmith given constantly to force wind out of the bellows*. The air that enters the lungs gets chemically vitiated, and the *Atma* constantly forces it out blowing it through his bellows, the lungs. Our third inference is from the natural *nictitation* of the eyelashes. Just as a juggler makes the puppet's move at every pull of the wires, so the tension of the proper nerves produced by the exertion of *Atma* keeps the eye-lashes executing their movement. Our fourth inference is with respect to the *spirit as an architect*. An architect master of the house soon builds up an edifice of his house, repairs a gone down ladder or a worn up ceiling, and plasters or whitewashes his dirty rooms. So does the architect *Atma* cause the growth of the yet undeveloped body, repairs its wounds and its fractured or injured parts. Our fifth inference with respect to the *Atma* is that of a *child* moving with a stick the spider from one corner of the room to the other.

So does the *Atma* move the spiritual body with the curiosity of a child, from one corner (organ) of the body to the other. Our usual inference is that of a spectator standing in the centre of a circular hall provided with windows on all sides, who can see undisturbed from his elevated position, through proper windows, what goes on in each direction. A fact is presented to the sense of sight. The colour only is seen, but the taste of it is soon remembered, and outthrusts the taste from the tongue as the luxuriance of delicious taste. Besides, we infer the existence of a substantial cause from such attributes as pleasure pain desire hatred will and knowledge. These attributes do not belong to the body or the organs. For the ego identifies itself with these attributes but not with the body or the organs. I feel, I desire, are true interpretations of consciousness, but not that the body or the organs feel, desire or are conscious.

These attributes refer to a substance wherein they inhere are not to be limited to any and every substance and are not cognizable by the outer senses. Hence they are the attributes of a third something *Atma*. The attributes of *Atma* are knowledge feeling of pleasure feeling of pain desire hatred, evilness morality and immorality impossibility number or gradate separate existence connectibility and separability. The first six attributes have been already dealt with. Morality and immorality are attributes of *Atma* for the human spirit is a responsible agent. The spirit is an imperishable for each individual alone can be the cause of memory. The ego of each individual being conscious of a different set of enjoyments

from the other, & being unable to present to his consciousness the states & feelings of another individual, it is clear that each human spirit has a distinct entity & is therefore in itself a unit, & possesses the attribute of number. As freely circulating itself in the body, it has magnitude. The feelings of pleasure, and pain all rise in the spiritual body, and the spirit is only conscious of them by its contact with the spiritual body and through it with the object of feeling. Hence its attributes of connectibility and separability.

To recapitulate. We have viewed *Atma* from the external or the scientific point of view. We have shown that honest faithful research into the physiology of man and his self healing powers reveals the presence of a subtle invisible essence, the fountain of all vitality and of all restorative and reconstructive energy. This animating principle has been called the *Atma*, and in the face of the evidence derived from the vital phenomena manifested by such animals as the *Gregarina* and the like, scientific men of Huxley's stamp have been forced to confess that "life is the cause & not the consequence of organisation." It has further been pointed out how schools of science and metaphysics have been at war with each other and among themselves, unable to explain the simplest phenomena of nature due to a partial recognition of the potencies of *Atma*. In the end was annexed

To illustrate the shortcomings of the above mentioned images.

If all it should be proved over and over again, the more edacious of all and that easily may fall to the ground. There exists a prejudice against it, which it will be well to carry out before proceeding further. The prejudice is to doubt the fact that it is a noble image of the cosmic process by the world.

This prejudice arises either from too superficial an acquaintance with the nature and devotion to matter, to physical pursuits and to purely experimental or empirical sciences where the faculty of abstract thought is constantly in demand but the faculties of reflection, imagination or abstraction are seldom if ever used.

An intimate acquaintance however with the phenomena of these very sciences will prove that the true causes of these phenomena and therefore the true realities, are always hidden, invisible and imperceptible. Take for instance the most familiar case of *Gravitation*. Every particle of matter attracts every other particle of matter in the universe with a force in proportion to the product of their masses, and in inverse ratio with the square of their distances. And this force is the scientific term *Gravitation*. Observe the infinity of palpable *fact* which the operation of this single law or the working of this single force produces. Every thing from the smallest atom to the most majestic sun is under its control. Gravitation is the parent of all phenomena of cosmic motions,—of the movements of planets in their

orbits, of the movement of satellites round the planets, of the change of seasons, of the flight of comets, of the fall of meteors, of tides and ebbs, and of eclipses. And yet, notwithstanding the palpability of its multifarious effects, is Gravitation *itself* palpable, or is it a *subtle, invisible, yet real* force, *existing* in nature, and revealing its presence by the *visible, palpable*, phenomenal effects it produces? Or, to take another example, *electricity*. What is this *all pervading substance*? No particle of matter is without it. Excitable by friction, or inducible by influence, it dwells within the interior of every material body, hidden and unperceived. When the electric current passes through the telegraph wires in the process of the message being 'transmitted, it passes unawares all the way long, leaving no palpable, 'visible effects on the wires, but the same invisible, hidden element makes itself felt in the receiving station by the ringing of the alarm, the sharp clicking movement of the magnet, the motion of the dial, or the jolting of the ink or the pencil. More mysterious still is the working of magnetism. There may lie a huge mass of iron, in the shape of a horse shoe, surrounded by a long coil of shellac covered copper wire, and in its vicinity may lie 'huge masses of iron, nails, pins, hammers, &c. As yet, the magic of magnetism is not at work. In an instant, the current of a strong battery is sent through the coil, and the inert lifeless piece of horse shoe becomes alive with a strange energy. It avariciously attracts the nails, and the hammer, the pins and every other iron around. There is no *visible, palpable* change in the iron of the

horse-shoe. But though unperceived it is now the play-ground of magnetism, which though so potent in its effects and manifestations, is itself subtle and invisible.

It is clear then, that the true causes of things are hidden, invisible and imperceptible by the senses. Their effects, the phenomena produced by them alone, are visible or perceptible. The chief fallacy of reasoning consists in such cases, in regarding the visible & immediate media of actions as causes; whereas, true causes are hidden, real and eternal. If the vital phenomena, manifested by living organisms, and above all, by man, have a cause at their basis, that cause must, of necessity be hidden real and imperceptible by the senses. The subtle, invisible nature of *Atma* therefore, instead of being an objection against its existence, is, in the true light of things, rather a proof corroborative, an essential consequence of its existence.

Viewed objectively therefore *Atma* can only be the subject of *inference*. Now every inference presupposes two things, the something whose existence is to be inferred and the *certain* data from which such existence is inferred, the ground of inference being some similarity or resemblance. The great problem of inference really lying in determining which similarity or resemblance is to be deemed as sufficient and which as insufficient for the purposes of such inference. The known datum or data, from which the unknown something is inferred are called, in Sanscrit logic, the *linga* and the something inferred is called the *anvaya*. With reference to this question of inference says Kashyapa, the logician—

अनुमेयेन सख्यं प्रसिद्धं च तदनुते ।

तदभावे च नाख्येव तल्लिङ्गमनुमापकम् ॥

That alone is a valid datum for inference (*lingā*) which has firstly been known to co exist with the thing to be inferred at some time or place, secondly is also known to be present wherever the like of the thing to be inferred exists, and thirdly to be absent wherever the unlike of the thing to be inferred exists. To take for instance, a concrete example. From the fall of the barometer is inferred the decrease of the pressure of the air. Let us see if such an inference can be a valid inference. The fall of the barometer is known, the decrease in the pressure is unknown. But we know from a *specific* experiment (*i.e.* an experiment conducted at a particular time and place), that decrease of pressure produces fall of barometer. This fulfills the first condition. Secondly, similar cases of the decrease of pressure, by whatsoever cause, are attended with the fall of barometer, but the third condition is not fulfilled. It is not true that wherever there is no fall in the barometer, there is no decrease of pressure, for, there may be no fall of barometer, although the pressure may have decreased. The mercury, through rise of temperature, expanded and became lighter. If the same pressure continued, the column of mercury would have risen higher up but the fall of pressure compensated for the rise and left the mercury apparently where it was. The three canons of Kashyapa, therefore, conclusively prove that the fall of the barometer is not the *lingā* of the decrease of pressure.

Similar reasoning will show that the decrease in the weight of the experimantal column of mercury is the $\frac{1}{2}$ of the decrease of pressure.

Having shown in general what data are fit to be the grounds of inference it remains to see upon what phenomena the inference of the existence of *Atmas* be grounded. These phenomena must bear some definite relation to time and be liable to occur in some cases where the several attributes of time are found and there should be no *Atma* where there are not found. These phenomena are of two kinds; firstly the work and activity of the bodily organs, and secondly the sensations of which one is cognisant. Hence it is from these two classes of phenomena that the existence of *Atma* can be objectively inferred. For consciousness being the characteristic attribute of time some activities of bodily organs are not only known to be produced by the will of the conscious *Atma*, but there are other activities that are not produced by will but are invariably observed wherever there is consciousness; and besides in all cases of living bodies dying or inanimate objects the organism or the object is devoid of the performance of those functions. And so with respect to sensation.

Before proceeding however to a detailed enumeration of such phenomena it will be useful to review a theory that has so often been alleged against the independent existence of *Atma* and is the minds of some unreflecting students so constantly throws its obstructive force against the clear comprehension of the subject on the part of an honest inquirer. That theory is the mechanical

theory We shall show, how far the mechanical theory can render an explanation of consciousness

Leaving apart *Atma*, man consists of three things, *sharira*, *indriya*, and *manas* *Sharira*, as Gautama defines it in his Nyaya philosophy, चेष्टेन्द्रियार्थाश्रयः शरीरम् १।११ ॥ is the solid framework of the body together with the visible organs, that are located in it It is the groundwork of all activity, the seat of all senses and their sensations. The *indriyas* are the fine subtle entities, distinct from but located in the fine visible organs of sense respectively, by virtue of each of which the *Atma* obtains a distinct and definite consciousness of each of the five sensations, smell, taste, colour, touch and sound The *indriyas* are, accordingly, the invisible internal media of sensation for the perception of the spirit That they are independent of the visible organs, is not to be laughed at For, in many cases, have the *tympanic membrane*, the *hammer* and the *anvil* of the ear have been removed, leaving the stapes alone, without injuring the sense of hearing And so with other organs Indeed, the fact of the senses being independent of the visible organs, instead of, in any way, contradicting our experience, is so clearly borne out by human experience that unsophisticated reason never doubts it For, "during the hours of physical repose, while the parts of the system are recruiting and reproducing new strength and energy, and while the organs of sense are closed to all external impressions, the mind, free from all obtrusive & disturbing influences makes imaginative excursions to different places and contemplates different things in existence. It supposes it

was a heart which seemed to be stirred to its
 frame by the sound of beautiful music, and a
 passing moment which appeared to enjoy. Sometimes
 it appeared it would feel more, or suffer during its ex-
 piration. It also appeared to be stirred by many pains
 where it had no previous desire or intention to be. Dur-
 ing all of these perceptions, the wave of sound, the
 reflection of light, the susceptibility of feeling the
 pleasure of feeling was all supposed to be enjoyed.

Thus prove that there is an *intermediate medium of*
mediation by which the mind enjoys its capacity as if the
 external were in contact with the world. It proves
 so that there is a medium acting upon these waves of
 vibration independent of internal and external existing
 causes. This medium which is the *medium*. A di-
 vinely necessary, the soul, or the mind is a blind entity dis-
 tinct from *Atma*. Says Cāṇakya in his Nyaya philosophy

यमपश्चान्मात्रात्पल्लवमसौ विंगम १।१६॥

The existence of the mind is established from the
 fact that one is only capable of attending to one thing at
 a time. It is said of a Greek philosopher that he was
 engaged in solving a mathematical problem when an
 army passed by and he was altogether unconscious of it. Till a soldier effaced the circle the philosopher held
 dear on earth a fact which alone disturbed the atten-
 tion of the philosopher. What followed may be left to
 history. Was the moment of an army entirely notice-
 less? Were no sounds waves propagated when the philo-

distinctions of the Eye, from form, body, organs, functions, attention, and even separation. There are two grand general principles which underlie the whole of the above reasoning. The first is the well known and much abused principle *ex nihilo nihil fit*. It is enunciated thus —

नामतो विद्यते भावो नाभावो विद्यते सप्त. ।

उभयोरपि दृष्टो न्तस्त्वगवोस्तत्त्वदर्शिभिः ॥*

What is not mere becomes something and whatsoever is is never reduced to nothing. The wise men have fully measured the entire truth of both these assertions. Prejudiced, sophisticated, vicious ignorant men's cannot easily comprehend this †. This is the cardinal principle of all sound philosophy. Creation is simply impossible. The principles of Nature only reveal *formation*. For, let us for one moment suppose creation to be possible. If possible, let something come out of *nothing*. This very assertion assumes that there is a *nothing* which can produce something. Hence there are two kinds of *nothing* first the *ordinary nothing* from which nothing comes out, secondly this *fe u'tai nothing* which gives rise to something. Now whatsoever has many kinds is not nothing but something. Hence nothing, which is of two kinds, is not nothing but something. Or something can only arise out of *something*. The reverse of it is simply inconceivable. The second principle which may be re-

* Bhagavad Gītā II 16

† Swami Dayanand Satyarthi Prakashā, page 222, 2nd Edition

grounded in the contrary of this is that form which is
 Valishta as follows—

कायगुणपूर्वकं चायिगुणो दृष्टः । १

The effect only reveals substance presented in the
 cause. Non-attributability given with two prin-
 ciples were in unity and consistently kept before the mind
 one would be quite safe from the attacks of ungrounded
 reasoning. But our materialists of modern times who
 hold the material theory to be sufficient for explaining
 the phenomena of the universe are not only content
 with forgetting these two principles, but openly and
 boldly contradict these very fundamental conceptions of the
 human mind. Says Charles Bradlaugh "The agnostics
 seem to think that they avoid the difficulty of transferring
 it upon us by propounding riddles. They analyse the body
 and, giving a list of what they call elementary substances
 they say: Can oxygen think? Can carbon think? Can
 nitrogen think? and when they have triumphantly gone
 through the list they add that as none of these by itself
 can think, thought is not a result of matter but a quality
 of soul. This reasoning at best only amounts to declar-
 ing "We know what body is, but we know nothing
 of soul as we can not understand how body which we
 do know can think we therefore declare that it is soul
 which we do not know that does think." There is a still
 greater fault in this theoretical reasoning in favor of the
 soul so, it is a riddle, contrary to experience that no
 quality or result can be found in a given combination

which is not also discoverable in each or any of the modes, parts, atoms, or elements combined. Yet this is monstrous & absurd. Sugar tastes sweet, but neither carbon, nor oxygen, nor hydrogen, separately tasted, exhibits sweetness, yet sugar is the word by which you describe a certain combination of carbon, oxygen and hydrogen. I contend that the word "soul" in relation to human, vital, and mental phenomena, occupies an analogous position to that which used to be occupied by such words as "demon," "goblin," "fairy," "gods," in relation to general physical phenomena" *

Is this sound philosophy? Does Charles Bradlaugh think that if this soul hypothesis cannot explain the phenomena of consciousness, his material atoms can? Here is his answer

"The ability to think is never found except as an ability of animal organisation, and the ability is always found higher or lower as the organisation is higher or lower

The orthodox maintainers of soul contend that what they call the soul will live when the human being has ceased to live, but they do not explain whether it did live, before the human being began to live"† Here Charles Bradlaugh speaks of the Christians, for the Vedic philosophy verily establishes the eternity, and hence the pre-existence of human spirits. Further on, he says, "The orthodox contend that what they call the elementary substances, taken separately, do not think, therefore man

* Charles Bradlaugh "Has man a soul?" pp. 45

† Charles Bradlaugh "Has man a soul?" p. 5

with the conclusion that such a man does not think
better than a soul. This argument is valid as an
argument for a soul, but it is not a philosophical
argument. It is a logical argument, and by way of
proof it will show in this philosophical sense.

And indeed, by the way, but I must say this. I
am afraid that we are all in the rightness of
lack of Brazil. I must say this. I am afraid
I am afraid of the possibility of the possibility of the
philosophy that is proved. It is to return to the first
question. I must say this. I must say we cannot ex-
plain the fact that and as long as the principle
exists, I must say it remains true and its reverse utterly
inconceivable. No man shall ever understand how body
can think. What is it? Is the material continuous?
I identify this, that is the existence of mind and matter is
ever to be explained to the matter is done. It should be
not by a thing to body or the elements of which it is
composed but it is nothing to begin with all body.
This something with respect to which nothing more is
proposed than "there is of it in it is not body"
may be conveniently termed the spirit, or as the English
world puts it, the soul. "I just know it more than in
deducing that it is a soul (what would we predicate no
more than what it is one before) that think." And yet
Bradlaugh has to find fault with this. And further he
compares it to the very principles enumerated above
and says that the assertion, that no quantity or result can
be formed by a combination that is not demonstrable in

the elements of combination, is monstrously absurd. He adduces the illustration of sugar, and says, the elements of sugar do not taste sweet, but that sugar does. Is not this superficial reasoning? Has no one, in a dream, ever tasted the sensation of sweetness? And yet there is no sugar, no certain combination of carbon, oxygen and hydrogen there. Sweet taste is not in the sugar, (for if it were, no one could ever dream of tasting sweetness), & hence it need not be in the carbon, oxygen and hydrogen of which sugar is composed. It is enveloped in a certain agitation of the proper nerve, and the specific combination of carbon, oxygen and hydrogen, known as sugar, only serves to set free by chemico-electrical energy of dissolution in the saliva of the tongue, a definite quantity of energy, which produces the agitation of the proper nerve, and hence the sensation of sweet taste. In dream, this agitation is produced, not by external means, but by internal ones. The case of sugar is, therefore, a further, illustration of our principle, instead of being a refutation.

But there are materialists wiser than Charles Bradlaugh who instead of denying the two grand generalisations of philosophy above mentioned, rather take their stand upon them, and bring in the word *latent* to rescue the mechanical theory from its intrinsic inability to explain the fact of consciousness. They fare no better, for, as we shall see, they are the victims of a graver logical fallacy. They reason thus — It is true that in the act of combination, no new qualities or results are produced but it very often happens that the process of combina-

into an organization in such a way that which was formerly
 latent and makes it manifest. For instance gun powder
 when heated, possesses the power of exploding. The ex-
 plosive power is already latent in the gun powder and
 the act of firing it renders manifest what was
 latent. To explain it further. It is well known that
 wood or charcoal when heated in the presence of oxygen
 burns. It is also well known that friction and percussion
 develop heat. And it is well known as well that if a
 part of space is filled up with a quantity of a gas, more
 than it can hold at ordinary pressure it will expand
 and will propel any body in the way of its expansion.
 The propulsion of cork from soda-water bottles is a
 familiar illustration. And lastly it is well known too
 that heat expands gases, and that gases occupy so many
 hundred times more space than the same substance in
 the solid condition do. All these are well known and
 familiar truths yet the manufacture of gunpowder is
 not an obvious invention. Why? Because we require
 a definite arrangement of substances and forces to
 gradually and naturally evolve a desired result. We
 want explosion. Now explosion means propulsion of
 shot. Let therefore a gas expand against shot. But
 whence are we to get a pressed or squeezed quantity of
 gas to expand? Evidently from a solid that by de-
 composition might evolve a gas and large quantity of
 of heat to heat. This gas is to be the carbonic acid, the
 gas of the soda water and the heat is to come from
 chemical action. But carbonic acid is the product of
 carbon and oxygen. Hence the solid mixture must

contain charcoal, the source of carbon, and saltpetre or nitre the source of oxygen. The prime al concussion is to be the source of the fire applied to the charcoal. Hence gunpowder is an ultimate mixture of charcoal, sulphur and nitre. A chemist thus explains its action: "The general decomposition which occurs when gunpowder is fired may be expressed by saying that the oxygen of the nitre combines with the charcoal, forming carbonic acid and carbonic oxide, whilst the nitrogen is liberated, and the sulphur combines with the potassium (of the nitre). Hence gunpowder can burn under water or in a closed space, as it contains the oxygen needed for the combustion in itself, and the great explosive power of the substance is due to the violent evolution of large quantities of gas, and a rapid rise of temperature causing an increase of bulk sudden and great enough to produce what is termed an explosion."

It is thus clear that in the process of combination, only properties that were latent become manifest. Hence it is argued that the specific combination of matter, which we call the organism of men develops or renders manifest the latent consciousness of matter. Hence, there is no conscious spirit. Matter with its infinity of properties is enough to explain all consciousness. Let us weigh this doctrine of latent consciousness carefully. When a pound of ice is taken and a thermometer inserted in it, and the whole heated, a large quantity of heat is absorbed till the whole of ice becomes water. This heat has no effect

* Henry E Roscoe. Lessons in Elementary Chemistry.

upon a thermometer. Or if it were used in
 ice with the whole of ice water as standard water the
 law would be any temperature of warmth. If in
 this case said to be a latent water. This is a
 mistake to say that any property of which
 there is no consciousness for the time being but which
 begins to be felt when proper condition is said to be
 latent. On what is meant when it is said that the latent
 consciousness becomes manifest? Can there be
 any latent consciousness? Can any one conceive such a
 jargon? All properties of substances that are external to
 us, or are objects that we may perceive by
 asserting and negating consciousness. But can any
 one conceive a consciousness that is not conscious?
 For what is latent consciousness? It is some sense of
 which there is no consciousness or an unconscious
 second mind? Latent consciousness is more than
 a singular person or a state of mind. It is a continuous
 thing in terms. This reasoning is based on a
 ignorance of the significance of consciousness. It is
 simply a fallacy (spread even) arising out of the
 metaphorical misuse of the word latent when applied to
 consciousness.

We will also here mention the physiological theory
 which is in vogue at present with scientific men and
 philosophers of the empirical school. This theory is
 another attempt to reduce consciousness to the terms of
 matter & motion. It establishes that brain is not only the
 principal organ of mind, but that the nerve currents gen-
 erated in the brain are the whole source of the mind we

known. Says a writer, "The brain is highly retentive of the impressions made upon it, they are embodied in its structure and are a part of its growth. They may be reproduced on after occasions, and then what we find is a series of currents and counter currents, much the same as what existed when the impression was first made. When the mind is in the exercise of its functions, the physical accompaniment is the passing and repassing of innumerable streams of nervous influence. Whether under a sensation of something actual, or under an emotion or a train of ideas, the general operation is still the same. It seems as if we might say, *no currents, no mind*." To it might be added what Herbert Spencer gives in one of his volumes on Synthetic philosophy. After stating how water, nitrogen and carbon establish the easily modifiable nature of the brain he goes to state that the nature of the current is the dislodgment of energy, and that all cerebral action is simply a case of the dislodgment of energy. The brain centres may be compared to wound-up springs. The nerves by their agitation start the first movement of the spring, and the brain centre begins to unwind itself. To show the merits and demerits of the explanatory limit of this hypothesis, let us consider the question, as to how is the consciousness of difference in *degree* and *quality* produced, and how are these two kinds of differences differentiated in pure consciousness. Every one knows what qualitative and quantitative (i.e. those belonging to degree) differences are. Two tons of soap differ from five tons of soap in quantity. But glycerin^e

* Alexander Bain Senses and the Intellect,

sour differs from carbonic acid in quality. Similarly our sensations, subject to experience, are present differences of degree & quality as well. The taste of a ounce of sugar dissolved in two pounds of water differs in degree from the taste of the same dissolved in one. But the sensation of taste differs from the sensation of colour in quality. The question is, How came man to know that there are as yet such things as a difference of degree, and a difference of quality? and finally how does he distinguish between these two? Here is an account of both on the disengagement theory which will render its fullness very plain.

Whenever molecular energy is disengaged at the conscious centres of the brain, consciousness is the result. Now on this hypothesis, consciousness of differences in degree results from the disengagement of greater or less quantity of molecular energy from the same centres of the brain. Differences of quality which objectively arise from sensations being transferred from distinct separate centres or organs through different channels, will be subjectively consciousness, on this hypothesis, by the disengagement of molecular energy from different centres of the brain. Thus far the explanation may proceed without error. But why should disengagement of molecular energy at one centre of the brain produce a consciousness qualitatively different from the consciousness produced by the disengagement of energy at another centre still? remains a problem.

Perhaps some would suggest that the chemical energy disengaged at different centres is disengaged by different integration of atoms of different elements or atoms of

different compounds, and hence the different sensations experienced. But even if it be so, the question still remains the same. For whether it be the energy disengaged by the decomposition of this compound or that, or by the setting free of the elements of this atom or that, the energy disengaged is energy still. And the only difference that we can conceive between the energies disengaged at two different centres of the brain, is the difference of quantity or degree, and not of quality, for energies disengaged are energies still. Hence we should only be conscious of difference of degree, even when molecular energy is dislodged at different centres of the brain, an assertion which is against all experience. We have shown how differences in quality cannot be explained by the theory of disengagement of molecular energy. It is at this stage, that the physiological hypothesis remains at a standstill in reducing consciousness in terms of energy.

We have thus shown how all materialistic explanations fare. It remains now to state the objective inferences regarding *Atma*. The first inference is from the structure of the nervous system with which man is endowed & its connection with muscular movement. The brain consists of collections of a grey matter, called brain centres, from which proceed fine white silvery threads, called the nerves. Some of these nerves, called the motor nerves, terminate in muscles, which are appropriated for definite motions. The function of the nerves is mainly that of a conducting medium like the telegraph wires. The brain centres

the muscles that obey the influence. This influence is called the nervous current. Thus is the apparatus of movement constructed in the human system. Suppose I wish to move my hand. At the command of will the proper brain centre sends forth the nervous current which travelling through the proper nerves produces the contraction of the desired muscle and forthwith moves the hand. This working of the muscular & nervous system proves the existence of a *will* *agent*. A very fit parallel of this is the case of the driver turning, by the exertion of his own power the reins of the horses that pull the carriage. The driver is the *will* *agent*. The hand of the driver that yields the impulses to the reins is the *physical centre* that yields the nervous current to the nerves. The reins are the *nerves* and the horse is the *muscular organ* which it is desired to move. The *Atma* is therefore regarded as the *reins* the *driver* of the body. This is the first inference.

The second inference is from the action of the lungs. There is in the act of respiration an inspiration & holding of the breath within and an expiration. In the act of inspiration, by the action of proper membranes, the air of the atmosphere passes within the lungs to oxidise blood, convert carbon into carbonic acid and burn off other impurities. Says Manu—

दहन्तेऽप्रायमानानि धातूनां हि यथा सप्ता ।

तथेन्द्रियाणां दहन्ते दीपाः प्राणस्य निषङ्गात् ॥

The goldsmith by blowing strongly against a piece of impure gold removes its impurities by oxidation. So a

proper blowing of the lungs produces the removal of all impurities of the body and the bodily organs by oxidation

Hence this vitiated, chemically changed air, now laden with carbonic acid and other impurities is further expelled by the act of expiration. This process is continually kept up, and thus by the cyclic movement of expiration and inspiration, the body expels its waste matter, renovates its blood, derives strength & nourishment from the invisible elements of the air, and repairs losses and injuries. This process argues the existence of a blower. To make the interence clearer, let us take the case of a goldsmith or blacksmith blowing with his bellows air into the furnace against a piece of gold or iron, when the air is forced out of the bellows into the furnace, a certain muscular force has to be exerted. But it requires no exertion on the part of the smith to fill the bellows again with air. So with the lungs. The expiratory function is under the control of the will. But inspiration is a purely involuntary act. Hence it is clear that the structure of the lungs displays the activity of an *agent* that constantly blows the air out.

A similar inference may be drawn from the phenomenal of winking. This function, too, like the lungs, is controllable by will, but even in its ordinary performance it is so exact and regular that it has been aptly compared to the movement of puppets at the hand of a skilled master. Winking may be artificially produced by touching the inner surface of the upper eyelid with anything solid, when the spasmodic flutter produced will most vividly bring out the notion of an interiorly residing hidden mas-

ter at whose command the flutter is produced, like the dance of the puppet in the effort to resist any such foreign material.

The physiological phenomena of recuperation and growth are above all most suggestive. The spirit in the process of the growth of the organism builds up by its interior anatomy all parts of the body proportionately repairs the injured parts, heals the wounds, and more remarkable still puts forth an incessant effort to shake off all disease and disturbance. The power of the spirit as an architect is well known and has given rise to such terms as the conservative powers or economy of the human organism. A true appreciation of this fact has also given rise to a new school of physicians who regard the human organism as a self-healing institution the medicines occasionally given under this treatment being meant to assist nature and not to counteract disease. Concerning this physiological power and other allied functions of the human spirit says a medical authority. By Materialists it is said the digestion is caused by the action of a certain organic matter called *pepsin* in conjunction with several free acids called *lactic*, *acetic*, *chlorohydric*. While the truth is especially manifest, the peristaltic movement in the alimentary channel like the motion of the innumerable glands in the mucous membrane, and therefore digestion itself is caused independently of the many wondrous cerebro-spinal centres, by the soul *per se* acting through the filaments of the sympathetic system which is the residence and fulcrum of the automatic functions and specially of those vital self intelligent princi-

ples which flow from the ethers and essences in the constitution of nature into similar substances in the spiritual organisation of man. Hunger, therefore, is a universal voice of the soul in behalf of itself and the dependent body, and digestion is an appropriation by the soul of whatsoever is supplied for the upbuilding of both itself and body.

Firstly, the complicated relations into which the passive organs of sense enter with the active vital organs, offer a most strong ground of inference for the existence of *Atma*. The colour or the smell of an object soon recalls its taste, and the idea of its taste immediately stimulates the tongue to secrete large quantities of saliva, as if in readiness to eat the substance. It is in fact by this very process that large quantities of saliva are obtained for experimental purposes from the tongues of dogs by presenting to their sight delicious dishes of the flesh food, without actually allowing the dogs, at least for the time being, to partake of it. Such indeed is the complicated relationship of the functions of the organs of sense and of the vital organs, that serious diseases may be started up or cured by the associations thus started up by a single perception. All these facts lead to the inference of a central conscious being here called *Atma*.

THE REALITIES OF INNER LIFE

CERTAINLY

THE fact that man lives on a double plane of existence that he leads a twofold life is not new in any sense. He lives the life of the *Self* and the life of the *Universal*. Scientific men deal with the one *Self* and the other with the *Universal*. The poet of nature and religious men agree alike in this. "O man! the brute and the angel are like in thee." The metaphysicians of older Sanskrit schools styled these two modes of existence the life of *Bahishkarna* and the life of *Anubhikarna*, the outer life of the Senses and the inner life of the *Intellect*. But the law of double existence is not applicable to it alone. It is a universal law. It applies to the universe. Matter is the entity of the Outer life and God the reality of the Inner life. And the Trinity of God, matter and contemplating Spirit exhausts the substances of the *Cosmos*. Thus the universe lives a twofold existence the outer the *physical* and the inner the *spiritual*.

The outer plane of existence is the one that is familiar to all. But the inner the internal, is a blank page, a white sheet to many. The inner is so far as inner is poetry is the outer as the external, is prose. And poetry is to many nothing but wild fantastic imagination let loose. Hence it is that matter with the ephemeral host of its countless attributes, is the only true God to many.

Earth's powers and principalities exclude most men from the society of poetry and eternal principles. Matter

is a powerful and controlling God, it is the prince of darkness" to millions of our throbbing humanity. Matter clings and clusters heavily about man's interior life, it is the dead weight of his perilous voyage from the cradle to the *crematory*. Men are necessitated to worship at the shrine of matter. They make it the chief object both of masterly effort and spiritual contemplation. Thousands reverence matter incessantly. They bow down before its altars. They bring to it many offerings covering—its temples with every thing within the power of man to bestow, with scientific art, and the works of genius, with developments of the noblest talents, with everything, even life itself.

Mammon is but the servant of matter, matter is but the servant of soul, soul is but the servant of spirit, but in this world, it happens that spirit and soul and matter are the servants of Mammon. No human soul is independent of its material surroundings. All life is real bondage to matter. Matter is the mind's jailor. Want is the overseer who lashes the prisoner into his daily labour.

'Tis the mandate of matter which the mind obeys nine tenths of earthy time. The sight of objects, the taste of flowers, the smell of odors, the cognition of sensations, the hearing of sounds—thus the spirit looks out and lives through the *grated windows* of its prison-castle.

How, then, can man, thus immersed in the life of the senses, realize the interior realities of inner life? The death of matter is the birth of the soul. Light and darkness can not co-exist.

अथ देवाहुः सन्धवादमदाहुरसन्धयात् ।

इति शृणुम धीराणां ये नम्रादप्यवचिरे ॥

Thus runs the tenth Mantra of the 40th Adhyaya of the Yajur Veda.

The life of senses (aridya) produces one result and the life of spirit (vidya) produces exactly the reverse.

अविद्यया मृत्युं तीक्ष्णं विद्ययामृतमश्नुते

"The life of the senses is spiritual death the life of the spirit is the *veritable* immortality."

हिरण्ययेन पात्रेण सत्यं चापिहितं मुखं ।

तस्यैव पूषणपात्रेण सत्यं चापिहितं दृश्यते ॥

"The resplendent face of truth is hid beyond the veil of the glitter of Mammon."

हिरण्ययेन पात्रेण चापिहितं

"O Preserver of the universe! remove the veil so that we might see the immortal truth."

Yes the veil must be removed, the brute is man-truth, *only*, before the influx of the Divine Light can be realized.

"The material world with its beauties and laws & harmonies, is *nothing* to the idiot mind caged in matter. The gorgeous heavens with their unnumbered systems of suns and stars are *nothing* to a soul bowed down by the daily drag of material necessities. The ponderous globes of space, so attractive to the uplifted mind of the philosopher are *nothing* to him who makes a God of gain. Matter and money surround him on either side. He drives

through his surroundings, and then they drive through him, and so goes his daily life "to the last syllable of recorded time"

The fair sky of heavenly truth never covers the earthly mind. Faith in such circumstances is impossible. Doubt, yes doubt, is the only paramount functionary that lives & flourishes. And what else is possible under such circumstances? In such a state, the mind seeks, in vain, for a soul-consoling philosophy. The world of matter, the region of discord alone, is visible. The Omniscient Intelligence of the far off immensities of the universe is nowhere to be found. The whisperings of the regnant functionary, Doubt, are too positive. "Has it not been said that by searching none can find out God?" And is it not true that the most strenuous god believers confess that it is only a belief with them, that they really know nothing on the subject?" These are the whisperings of Doubt. But the prime minister of the life of senses, this sceptical functionary does not end his researches here. He is thorough-going. He enters the material world, asks the sciences whether they can disclose the mystery. And this is the summary result of his investigations.

"Geology speaks of the structure of the earth, the formation of the different strata of coal, of granite, of the whole mineral kingdom. It reveals the remains and traces of animals long extinct, but gives us no clue whereby we may prove the existence of a God."

"Natural History gives us a knowledge of the animal kingdom in general, the different organisms, structures

a display of its various species. Physiology teaches us the mechanism—the laws that govern his being, the functions of the vital organs and the conditions upon which alone health and life depend. Pathology treats of the laws of the mind, the different portions of the brain, the temperaments, the organs how to develop some and repress others to produce a well-balanced healthy condition. But in the whole animal economy though the brain is considered to be a "microcosm in which may be traced a resemblance or relationship with everything in nature not a spot can be found to indicate the existence of a God."

"Mathematics lays the foundation of all the exact sciences. It teaches the art of combining numbers, of calculating and measuring distances, how to solve the problems to weigh mountains, to fathom the depths of the ocean; but gives us no directions how to ascertain the existence of a God."

"Enter Nature's great laboratory—Chemistry she will speak to you of the various elements, their combinations, and uses of the gases constantly evolving and combining in different proportions, producing all the varied objects, the interesting and important phenomena we behold. She proves the indestructibility of matter and its inherent property—motion; but in all her operations no demonstrable fact can be obtained to indicate the existence of a God.

Astronomy tells us of the wonders of the solar system—the eternally revolving planets, the rapidity & certainty of their motions the distances from planet to planet, from

star to star. It predicts with astonishing & marvellous precision the phenomenon of eclipses, the visibility on our earth of comets, and proves the immutable law of gravitation, but is entirely silent on the existence of a God."

"In fine, descend into the bowels of the earth, and you will learn what it contains, into the depths of the ocean, and you will find the inhabitants of the great deep, but neither in the earth above, nor in the waters below, can you obtain any knowledge of his existence. Ascend into the heavens, and enter the milky way, go from planet to planet to the remotest star, and ask the eternally revolving systems, Where is God? and echo answers—Where?"

"The universe of matter gives no record of his existence. Where next shall we search? The universe of mind? Read the millions of volumes written on the subject, and all the speculations, the assertions, the assumptions, the theories and the creeds, man has only stamped the indelible impress of his mind on every page. Human records are, at the best, delineations of human character, of phases of human mind, picture of human existence, but where is God?"

"Look around you, confess that there is no evidence of intelligence, of design, and consequently of a designer? What is intelligence? It is not a thing, a substance, an existence in itself, but simply a property of matter, manifesting itself through organisations."

These, then, are the fond insinuations of doubt, the whisperings of Scepticism, and the legitimate consequences of a life of the senses, an existence in matter, a worship of Mammon, & belief in omnipotent atoms.

For how can God be thus known? Geology Natural History Physiology Anatomy Phrenology Mathematics, Chemistry Astronomy and all are but grosser developments, the outer kernel. They deal only with the tangible the actual the optical, the edible the olfactory & the palatal. But God, the universal spirit of nature — *serener spiritus*, — is beyond the sensible is far beyond the transient mobile vibratory phenomena of the senses. Do you descend into the earth and ascend into the heavens, and explore the regions of immensity to discover the locality of the Universal Spirit?

He is remoter than the remotest, as the physical senses discern him not. He is nearer than the nearest for He is the innermost but foreign or exotic to all that is external.

The law of God's revelations unto the soul is the inner harmony. The whirlwind of matter obstructs the adjustment of the internal. Abstraction, meditation mental quiet and contemplation alone are compatible with the realization of the Divine.

But when he who makes boast of his high impregnablety is himself most vulnerable he who prides himself upon his valor is himself most cowardly; he who preaches truth to others, is himself most untruthful; he who sets himself up as the leader of a legion, is himself misled; he who styles himself an honest citizen is unjustly living upon heavy profits filched from the daily toil of hopeless men how he claims to belong to an honorable profession

God, its discovery and appropriation, the true birth of the spirit and the immortality of the soul. Decidedly then I give preference to the invisible over the visible.

"That my meaning may be more distinctly comprehended, let it be observed that the body is a form, is transient, is changeable, the internal *not* changeable. The man is the internal, the effect or form is external. The mind is not acted upon, but acts on the body. That which is internal is the reality, that which it acts on is visible and mortal. And all appearances foreign are composed of the same mortal ingredients, mortal in the restricted sense of that term.

Now it being clear that the visible is not the real, but that the invisible is the eternal, it follows that we must make the test of truth to consist in an imperceptible, yet unchangeable and eternal principle. Admitting this much, you are able to advance one step further in the cognizance of possible probabilities. Effects are witnessed, they are traced to an immediate cause, which is demonstrated by strict and severe analysis. This cause producing this effect shows you that the effect is not without a cause. This effect produces another and that also another, and so by analogy you may see there is an endless and incalculable amount of causes and effects. And tracing causes to effects and effects to causes, is the correct process of reasoning, and this you do in your imagination until you arrive at a chaos of existence, then stop breathless and return to ask, What was the cause of the first cause? You would not have gone upon these trackless peregrinations, if you had but considered all forms and

externals as not causes but effects. Let us illustrate this by an example.

Conceive of a germ being hidden beneath the surface of this hard earth. Imagine that you forget its existence. Let a few years of time elapse and cast your eyes to the spot where it was concealed and you see a lofty and beautiful tree standing in all the majesty and dignity of its nature. Would it not be as absurd and impossible to disbelieve the *existence* as it would be to doubt for one moment, the germ which has produced this existence? The tree stands and is visible as an ultimate man stands and is also an ultimate. The germ of the tree you know of its existence, but the germ of the world, you do not know of its existence. But is it not evident that the latter is at least *possible* since the first is known and demonstrated? By ever assenting to such a possibility we become prepared to take one more careful step in this investigation.

Let us illustrate the next step to be taken by another example. Suppose a man diseased physicians examine his case guided both by physiological manifestations of the disease and by the feelings which the disease produces, which are not perceptible to them by any processes of external observation. The patient communicates his own feelings, the physicians taking them for granted, and from these together with the symptoms manifest they decide upon the name of the disease. Each of these physicians from the evidence which he has received through the senses, differs from the others as to the characters of the disease. Have you not here proof that the external

and transfer is the effect and cannot be relied on, while the cause is hidden, and you do not possess any means by which to investigate its cause?

Again, a man has a curious tooth, he tells you he experiences a severe pain, but you doubt his word & ask for proof. He points you to the tooth which is the object tangible. But does the evidence, of which your senses admit, convince you that he has a pain?

Another example, The whole world of mankind can give in their united testimonies that they positively and absolutely see the sun rising in the east and setting in the west. Is there not internal evidence that the external and manifest of this is positively unreal? Inward searching after truth has established the cause of this phenomenon and proved that the sun does not move. But it is the visible and the external that you are deceived by, and not the invisible which is the reality.

Hence the true student of nature contemplates the invisible in the visible and back of nature, silently contemplates the cause which produced this theatre of human existence, and with highest reverence for truths pertaining thereunto associates with the first Principle of life & activity. His aspirations are purely of an intellectual or moral character. The universe is full of the Lord, and there is nothing of the universe that is not of the Lord.

ईशावास्यमिदं सर्वं यत्किञ्चिज्जमत्या जगत्

To his purified understanding, freed from passion and dislike, devotion and meditation, confidence and dispassion open the way where the beams of wisdom softly

enter and shed a mellow agreeable lustre on his feelings & direct his intellect. He has discovered the true & vision the invisible matter in whom the universe has its being. To him the inner or is the real. His expanded intellect passes through the dense to that which is essential to the spirit within the body to the life within the law to the science within the substance.

The conclusion from the above is that it is the expanded intellect, and not prayer that can lift the soul to the realisation of the divine reality that the most earnest prayer we can ever utter is the righteous exertion to merit the inspirations of that Flow into the intellect from the Fountain head of all Wisdom.

It has been my object in the present, imperfect ¹ hasty sketch of my ideas presented to you to establish and make plain three conclusions :

1.—That there is a true inner life and that man subjected to the interference of the commotions of the world cannot fully perceive & comprehend the Universal Truth.

2.—That from inability to perceive this Universal Truth by the expanded intellect or purified reason have sprung up the potent theological remedies of prayer-doses and tearful brain reliefs.

3.—That the Original Organizer of the Universe is the Invisible, the Potent the Universal and the All governing Reality of the inner world.

CRITICISM

ON

Monier Williams' 'Indian Wisdom.'

—o—

We have mentioned the Preface,* the Introduction and the review of the Vedas. We now come to the Brāhṃaṇas and the Upanishads. The very ancient religious records also find a place in the book, occupying 21 pages. Then come the Six Schools of philosophy,—the Nyāya, the Sāṃkhya, the Vaiśeṣika, the Yoga, the Pūrva Mīmāṃsā and the Vedānta schools. This chapter runs through 78 pages. Then we come to Jainism and Bhāgavat Gītā. Bhāgavat Gītā has been with great truth styled, the eclectic school of philosophy, and why not so, the Sāṃkhya Mārga, the Yoga Mārga & the Bhakti Mārga, the three royal roads to salvation are equally recognised. This occupies 28 pages. We come now to the Vedāṅgas,—Śikṣā, Vyākaraṇa, Nāṭaka, Gāhanda and Jyotiṣh,—alphabet, grammar, etymology, prosody and astronomy. This occupies 40 pages. Then come the Smritis, they occupy 114 pages. Manusmṛiti and Yājñavalkya are thoroughly reviewed. The author is at home here. He is well pleased to find matters of con-
 * The Manuscript about of 3 pages is missing except those last few words, consisting of the author's remarks aptly interspersed with long quotations and translations from other authors.

* The Manuscript about of 3 pages is missing except those last few words, consisting of the author's remarks aptly interspersed with long quotations and translations from other authors.

passing notice. They occupy 70 pages. The following is the summary—

It is evident then, that the author is obviously a man of vast study, of wide information, and possessed of encyclopedic knowledge, at least in so far as Sanskrit is concerned. It is well for us to avail of the information that can be culled from such a source, as such treasures are not often to be found. They are exceptional and very rare. The more we proceed with the perusal of the book the more impatient we become to learn the scope and the contents of the book. This information I shall now no longer withhold from you. I proceed directly to the scope, the aims and objects of the book.

Says Professor Monic Williams, p. 3 of the Preface:—

"The present volume attempts to supply a want, the existence of which has been impressed upon my mind by an inquiry often addressed to me as a Hindu Professor:—Is it possible to obtain from any one book a good general notion of the character and contents of Sanskrit literature?"

Further on he says:—

"Its pages are also intended to subserve a further

object They aim at imparting to educated Englishmen by means of translations and explanations of portions of the sacred and philosophical literature of India, an insight into the mind, habits of thought, and customs of the Hindus as well as a *correct* knowledge of the system of belief and practice which has constantly prevailed for at least 3,000 years, and still continues to exist as one of the principal religions of the non Christian world

Then on page 36 of the Introduction, we have —

"It is one of the following pages to indicate the points of contact between Christianity and the three chief *false* religions of the world, as they are represented in India' —(Please mark the word *false*)

Then on page 38 of the Introduction, we have —

"It seems to me, then, that in comparing together these four systems—Christianity, Islam, Brahminism and Buddhism—the crucial test of the possession of that absolute divine truth which can belong to only one of the four, and which—if supernaturally communicated by the common Father of mankind for the good of all His creatures—must be intended to prevail everywhere, ought to lie in the answer to two questions 1st What is the ultimate object at which each aims? andly By what means and by what agency is this aim to be accomplished?"

It is clear then the objects of the book are —

I In one book to give a general idea of the character and contents of Sanskrit literature,

II To draw for Englishmen a picture of our manners, habits, customs, institutions, and beliefs, not a distorted,

picture, a misrepresentation, but a true one for the picture is to be drawn by means of illustrations and explanations of portions of our sacred literature. II

III To indicate the points of community between Christian and other non-Christian religions.

IV That Islam, Buddhism and Brahminism (mark the last) are the three false religions of the world—or that Christianity is the only true religion.

V That telling Christianity Brahminism Islam and Buddhism the possession of absolute truth can only belong to one of the four.

VI That the absolute divine truth as supernaturally communicated by the common Father of mankind (embrace this truth Christianity) is one that is intended to prevail everywhere.

VII That firstly this absolute truth is the only religion that gives a correct answer to the question What is the ultimate object or aim? And secondly that this absolute truth or Christianity alone gives the true scheme by which the common end or object of all is to be accomplished.

How far the last four articles of Professor Monier Williams's claims are right will just appear in the sequel.

A brief sketch of the answer to the first article has already been given in an enumeration of the contents of the book. Let me only point out that the four books, esteemed only next to the Vedas, and generally called the Upa Vedas, find no mention anywhere throughout the

1st It is especially upon the subject matter of these Books that a true estimate of Indian & occidental civilization can be formed by comparison. These four books are the *Atharva Veda*, the *Dhanur Veda*, the *Ayur Veda* and the *Gandharva Veda*. The *Artha Veda* is the *Upa-Veda* that deals with applied Mechanics, Engineering, Perspective, Practical Arts (chemical and physical) and genealogy. The *Ayur Veda* is the *Upa Veda* that deals with Surgery, Botany, Physiological Chemistry, Anatomy, Physiology, Materia Medica and the Chemistry and cure of poison. The *Gandharva Veda* is the *Upa Veda* of Music or fine arts whereas the *Dhanur Veda* is the science of Martial appliances, instruments and tactics.

The second article, important as it is, will only be estimated at its due worth, in the progress of their review. In the course of these lectures it will be shown how far Professor Williams misrepresents or otherwise, or rightly translates or mistranslates, gives genuine explanations or forged ones of the portions of our sacred literature.

The third article shall be reviewed fully at the end of the whole course of these reviews.

We come now to the subject matter of the Introduction.

It deals with four points. Firstly, it gives a sketch of the past and present condition. The main portion consists of a geographical, political and historical sketch of the past condition of India as imagined by the so-called historians and philologists to be true. All this is foreign to the purpose of my review. One point, however, is worth pointing out. It is where he gives his own remarks on caste system.

This is what he says (p. 24 of Introduction) —

"Even in districts where the Hindus are called by one name and speak one dialect they are broken into separate classes divided from each other by barriers of caste. Far more difficult to pass than social distinctions of Europe," &c., &c. This separation constitutes in point of fact an essential doctrine of their religion. The growth of the Indian caste system is perhaps the most remarkable feature in the history of this extraordinary people. Caste as a social institution, meaning thereby conventional rules which separate the grades of society exists of course in all countries. In England, caste in this sense exerts no slight authority. But with us caste is not a religious institution.

On the contrary our religion though it permits differences of rank, teaches us that such differences are to be laid aside in the worship of God, and that in His sight all men are equal. Very different is the case of the Hindus. The Hindu believes that the Deity regards men as unequal, that he created distinct kinds of men as he created varieties of birds or beasts, that Brahmanas, Kshatriyas, Vaishyas and Shudras are born and must remain distinct from each other; and that to force any Hindu to break the rules of caste is to force him to act against God and against nature.

Professor Monier Williams then points out that caste rules in India hinge upon: 1. Preparation of food, 2. Intermarriage, 3. Professional pursuits. Had the Indian Professor professed to base these remarks upon personal observations or accounts of India as given by various

writers on the subject, we would have nothing to add but the Bilen Professor regards the sacred Sanskrit literature to be the only key to "the satisfactory knowledge of the people committed to our (he means his or his nation's) rule. He says—

"Happily India, though it has at least twenty distinct dialects has but *one* sacred and learned language and one literature, *accepted* and *revered* by all adherents of Hinduism alike, however diverse in race, dialect rank and creed "

And it is upon the sacred Saanskrit literature of India that he bases his remarks. Let us see how far they are correct. The Professor asserts —

I That caste system in India is a religious institution whereas it is only a social institution in England. It is good for our brothers to note down the confession that there is caste system in England

II That according to Christianity, all people are a like to God, but in Brahminism the Deity regards men as *unequal*, or

III That Brahmanas, Kshatriyas and Vishyas are born, and

IV That only people of the same caste eat together, intermarry and pursue the same professional pursuits, these three being the tests of caste

With regard to the second point, that according to the doctrines of Brahminism God regards men as *unequal* I quote the 2nd Mantra of 6th Adhyaya of Yajur Veda—

यद्येतां वाचं यस्याहीमाददामि जनेभ्य तस्य
 राजन्धस्यां गूदाय चार्याय धन्याय पौरषाय च ।
 पुत्रा देवानां दक्षिणाय दानुरिह मयासमयं मे
 कामं समुच्चतामुपमादो जमत्तु ॥

The meaning of which is that "I (God) have given my word (Revelation) which is the word of salvation for all people, Brahmans, Kshatriyas, Vaishyas, Shudras, and even the Shudras. Therefore regard no one as unequal among yourselves, but try to be loved by all wise people to distribute gifts among all, and always desire the well being of all.

The Ma tra is very clear and I have quoted it to show that the first prebion assumed by the Boden Professor is groundless. We come now to his assertion that caste is a religious Institution and not a social one in India. Now an Institution is called a religious one when distinctions of the Institution are maintained on the ground that they are obligatory by religion, but all distinctions maintained on the ground of differences of wealth, learning and industry are social distinctions.

Let us read Mann.

विप्राणां ज्ञानतो ब्रूते क्षत्रियाणाम्नुवीर्यतः ।
 वैश्यानां वन्यताव्यतः शूद्राणामेव जनमतः ॥

The meaning of which is that the ground of distinction among Brahmans is from the point of learning, that

among Kshatriyas is on account of physical powers and that among Vaishyas is on the ground of wealth and Possessions, that among Shudras alone does birth distinction exist. Lest Monier Williams may mistake my sense and the sense of Manu, and assert on the face of of these quotations that Brahmanas, Kshatriyas and Vaishyas are born, let me again quote Manu—

शूद्रो ब्राह्मणतामेति ब्राह्मणश्चैति शूद्रताम् ।

क्षत्रियाज्जातस्तन्नु विद्याद्वैश्यात्तथैव च ॥

Which means that Shudras can become Brahmanas and Brahmanas Shudras and so with Kshatriyas and Vaishyas

Again Says Manu—

जन्मनः शायने शूद्रः संस्काराद्भवेद्भिजः ।

That all people are born Shudras, but by *sanscar* or by virtue of *guna karma saadhya* of their acquisitions and accomplishments, become Brahmanas, Kshatriyas &c

The fourth position taken up by Monier Williams is that eating together, intermarriage and similarity of pursuits define a caste. Among these three, the second only deserves consideration. For, if similarity of pursuits be any element, it might be as reasonable for Monier Williams to regard all Professors of Schools and Colleges in England to belong to one caste. The same remark applies to food and drinks. Eating and drinking together is absolutely prohibited in Manu not only for people of different castes, but all individuals alike

नोपिष्टः कथं विद्याम्, माया च व तपान्नता ।

न सीतायामनं कथं वापिष्ट उच्यते ॥ १ ॥

Meaning —

Let us now see from the same old Vedic story that the same old Brahmin and Kshatriya story is still current in the present day.

The present Brahmins fear that if the same old story is repeated in the present day the same old story will be repeated again from the past —

यथापि विनामोनामगमना नारदस्य वि ।

कामतन्तु पशुनामामिमांश्च क्रुमय ॥ १ ॥

यन्नेव भावा मुदृष्यतां च यथा विद्यमानम् ।

ते च यथा चैव राजस्य तस्य यथा चापममनम् ॥ २ ॥

The meaning of which is that the best thing of this marriage is that in which the man and the woman are of the same caste or what is wrongly called caste but a Shudra woman should only marry a Shudra, a Vaisya woman a Vaisya. The Kshatriya should marry a **मूला वैश्या**, यद्विद्या अर्थात् Brahmanas &c.

This shows that the law of Vedic woman marry if a Brahmanas is allowable and so for others. Professor Monier Williams assumed that the caste system is a religious institution, but it is a social one in fact. We have proved that caste system is not a religious institution but a social one which is everywhere. He asserts

ed that in Brahminic religion Deity regards all men as unequal but we have proved that He does not. He asserted that Brahmins, Kshatriyas and Vashyas are born. We have proved that they are not but Shudras are. And lastly he asserted that similarity of professions intermarriage and eating together are the characteristics of a caste. We have shown that they are not. We now leave this point which is peculiarly illustrative of the unrivalled learning of the Professor and come to his second part of the Introduction on the religion of the Hindus.

He says that there are 3 points of view from which any religion may be looked, 1 faith, 2 work or ritual, 3 doctrines or dogmatic knowledge. He calls the 1st two, faith and work or ritual, the exoteric side of religion, and doctrines or dogmatic knowledge, the esoteric side of religion. After laying down this distinction he says that viewed from an esoteric point of view, the Hindu religion is Pantheism. He says —

“ It (Hindu religion) teaches that nothing really exists but the Universal Spirit, that the soul of each individual is identical with that spirit, and that every man's highest aim should be to get rid for ever of doing, having and being, and devote himself to profound contemplation with a view to obtain such spiritual knowledge as should deliver him from the mere illusion of separate existence and force upon him the conviction that he is himself part of the one being constituting the universe ”

We shall see how our Bodaiy Professor of Sanskrit is right in these assertions. He says that Hind religion teaches —

- I. That nothing but the Universal Spirit exists.
- II. That each individual is identical with this Spirit.
- III. That every man's aim should be to get rid of all action, doing, having and being.
- IV. That each one should free himself from being in this separate existence.
- V. That each one soul is part of the being constituting the Universe.

Let us now examine these five propositions.

His first proposition is that nothing but the Universal Spirit exists. I quote here from an Upanishat —

सखामखी खोदितमुकुख्या
बहो, प्रजा मृजमाना सरूपा ।
अमी अमी लुपमानो ऽ भुवोते
अहास्य ना मुलभोयामखी ऽ प्य ॥ १

The meaning is that God, matter and human souls (these are the three eternal substances, ever uncreated). The eternal human souls enjoy the eternal matter while involved in material existence. Whereas the third eternal substance God exists forever but neither is involved in material existence, nor enjoys the material world. Here it is said that not only universal spirit alone exists but matter and human souls also exist co-eternally.

If evidences were required on this head, it would be easy to quote many other very clear passages, but I believe that above is clear enough.

Williams' second proposition is that each is identical with the Universal Spirit. Here let me quote from the Brihadaranyaka Upanishat —

य आत्मनि तिष्ठन्नात्मनोऽन्तरो-

ऽग्रमात्मा न वेद यस्य त्नाशरोरम् ।

आत्मा नोऽन्तरा यमयति स त आत्मान्तर्याम्यमृतः॥

Says Yajñavalkya to Maitreyi in answer to her question, O Maitreyi the Universal Spirit who pervades even the human soul, but is distinct from the human soul, whom ignorant human soul does not know, who resides in the innermost of the human soul, who is distinct from human soul but witnesses the actions of the human soul, and awards or punishes him, yes, even He the Universal Spirit is immortal and also pervades thee.

Williams' third proposition respecting Brahmanical religion is that it teaches every man the duty of getting rid of all doing, being and having.

I quote her. from the 40th chapter of the Yajur Veda—

सुर्वदेवेह कर्माणि जिकीविषेच्छतृप्समाः ।

एव त्वयि नान्ययेतो ऽस्ति न कर्म लिप्यते नरे ॥

The meaning of which is that each soul should desire to live for 100 years or more depending his life on doing

actions, also perform good deeds. That alone and not others is a freedom from any and all possible. The purport is that the doing of action or good is the first essential.

Williams' fourth operation is that each soul is free from the devious of space and time. I need not overstate, still it is clear that he is saying God is detached from the world, the idea of separate existence is not a devious and if this be not a devious, it is not a proper object of cognition.

The fifth assumption that each soul is a part of the being of universal spirit is wrong. If anything could be said about this, it will suffice to say that not in one M. it is but in innumerable M. and Upanishads, the Universal Spirit is regarded as one whole without form, body or parts, it is not divided. Since God has no parts, it is more absurd to believe that human souls can be parts of of the Universal Spirit that is incapable of being divided into parts.

Then in order to rectify this pantheistic view which does not admit of any necessity of faith work or ritual with the existence of faith, innumerable works or rituals in India, Williams forgets a fallacious reasoning which is called in Sanskrit logic by the technical name of *kalal*. He says that because God is identical with human soul as they were led to believe that human souls had only emanated from God. English language and English brains are perhaps so capable of confounding identity with

emanation, but unless a clear proof of it is given, I am not in a position to say anything respecting the justification of Williams' position

I now come to the 3rd part of the Introduction, i. e., the one respecting the Languages of India

Says Monier Williams—

"The name Sanskrit as applied to the ancient language of the Hindus is an artificial designation for a *highly elaborated form* of the language originally brought by this Indian branch of the great Aryan race into India. The original tongue soon became modified by contact with the dialects of the aboriginal races who preceded the Aryans, and in this way converted into the peculiar language (*bhasha*) of the Aryan immigrants who settled in the neighbourhood of the seven rivers of the Punjab and its outlying districts (*Sapta Sindhavas*—in Zend *Hapta, Hendu*). The most suitable name for the original language thus molded into the speech of the Hindus is Hindi-i (= Sindu-i, its principal later development being called Hindi,* just as the Low German dialect of the Angles and Saxons when modified in Britain was called

* It may be thought by some that this dialect was nearly identical with the language of the Vedic hymns, and the latter often gives genuine Prakrita forms (as *Kuta* for *Krita*), but even Vedic Sanscrit presents great elaboration scarcely compatible with the notion of its being a simple original dialect (for example, in the use of complicated grammatical forms like Intensives), and Pāṇini, in distinguishing between the common language and the Vedic, uses the term *Bhāṣa* in contradistinction to (*khanda*: the Veda)

A curious illustration of what happened in India we have to give in the following. The Sanskrit language, which was a general term, and which had been applied to a great number of the one elaborated by the learned, the other for a vulgar and common purpose, and by the uneducated. In India however from the great or at least one of the educated for the greater ignorance of the masses, and the desire of a proud priesthood to keep the key of knowledge to their own possession, this separation became more marked, more diversified, and progressively increased. Hence the very grammar which the other nations were regarded on as a means to an end, came to be treated by Indian Pandits as an end in itself was subdivided into an intricate science fenced around by a bristling barrier of technicalities. The language, too, elaborated for use with the grammar rejected the natural name of *Prakrit* or the speech of the Indians, and adopted an artificial designation, *Sanskrit*, the perfectly constructed speech (*sam-skrita*, *kṛita*—artificial, "formed") to derive its complete separation from vulgar purposes, and its exclusive dedication to religion and literature; while the name *Prakrit*—which may mean the original, as well as the door of speech—was reserved to the common use. This of itself is a remarkable circumstance; for although a similar kind of a partition has happened in Europe yet we do not find that Latin & Greek ceased to be called Latin & Greek when they became the language of the learned, any more than we have at pre-

sent distinct names for the common dialect and literary language of modern nations "

Herein Monier Williams asserts 6 distinct propositions —

i That Sanskrit (well formed) is an artificial designation

ii That it is highly elaborate.

iii That it was modified by the tongue of aboriginal tribes and gave rise to Bhasha

iv That Grammar is so elaborate that it was regarded as an end and not as a means

v That Sanskrit Grammar is an intricate science forced by a bustling barrier of technicalities

vi. That Prakrit means the original tongue. We will take each of his propositions turn by turn

A designation is artificial when it is arbitrarily chosen not on the ground of the sense expressed by it For an individual being called John, or Monier Williams, John Monier Williams, is an artificial designation, because it does not signify any attribute or attributes of the individual which the word Monier Williams denotes Well then Sanskrit is an artificial designation He himself admits that Sanskrit means well formed Let us see if Sanskrit is well formed * * * * *

very prolixity natural to Indian writers led to the opposite extreme of brevity, not merely by a law of reaction, but by the necessity for providing the memory with aids and restoratives when oppressed and debilitated by too great a burden." Professor Williams would have been perfectly right in passing the above remarks, were it not that the Sanskrit writings that abound in prolixity have followed and not preceded the condensed literature in point of time. Leaving out of account the Vedas which are the starting point of Indian literature, the Upanishats the Upavedas and especially the six Darshanās may be called the condensed literature of India, whereas the later novels, dramas, *puranas* and *vr̥ttis* and *līkas* may, with perfect truth, be styled the prolix literature of India. Now, not a single line of the Upanishats or the Upavedas or the Darshanās was written posterior to the *puranas*, the dramas, &c, and Professor Williams also admits this. What meaning are we to attach then to Williams' assertion that the condensed literature was due to a law of reaction? Does Monier Williams mean that long before there had occurred an action, & long before the prolix literature came to be written, there had set in a reaction, & that of condensed writings? Monier Williams is much to be credited for his logic, for, according to him, a reaction precedes the action of which it is a reaction. Supernatural Christianity, which is the religion of Monier Williams, finds a very true advocate in him. A son without a father is what Christianity would have us believe. But Monier Williams would rather that the son

entered long before the birth of his father. We shall find as we proceed farther on that this is not in any way a startling proposition as compared with others that Monier Williams has yet set a foot. His second reason is that the ancient had recourse to the condensed methods of writing as aids and restoratives to an oppressed and debilitated memory. Now gentlemen, be fair and judge among yourselves. What was there to oppress and debilitate the memory. Was it the Upanishads, the Upanishads or the Brahmanas? Professor Williams must be blantly ignorant of Sanskrit literature if he thinks the Upanishads, the Brahmanas or the Upanishads could oppress or debilitate the memory. It is one of modern civilization to deteriorate the intellect and enslave memory. I here quote from a number of a well-known scientific paper "Nature," dated 31st January 1883.

Few students of science can fail to feel at times appalled by the ever increasing flood of literature devoted to science and the difficulty of keeping abreast of it. It is in one special and comparatively limited branch of inquiry. Were merely the old societies and long established journals to continue to supply their contributions, these as they arrive from all parts of the country and from all quarters of the globe would be more than enough to tax the energy of even the most ardent enthusiast. But new societies, new journals, new independent works start up at every turn, till one feels inclined to abandon in despair the attempt to keep pace with the advance of science in more than one limited department.

"One of the most striking and dispiriting features of this rapidly growing literature is the *poverty* or *worthlessness* of a very large part of it. The really earnest student who honestly tries to keep himself acquainted with what is being done, in at least his own branch of science, acquires by degrees a knack of distinguishing, as it were by instinct, the papers that he ought to read from those which have no claim on his attention. But how often may he be heard asking if no means can be devised for preventing the current of scientific literature from becoming swollen and turbid by the constant inpouring of what he can call by no better name than rubbish." If more required on this head, I would refer the reader to the prevalent systems of education for a verification of the results. Who is here that does not acknowledge the all importance of *cramming* in passing the examination?

Who is here that would not evince to the fact of mathematics and even philosophy being nowadays learnt on the cram system? It is not India alone that is teeming with these deformities. Much more so is this case with England. There the cry of memory complaints has risen so high that many professors have set up entirely new schools of memory training with the express object of saving poor English memories from utter destruction and ruin. Is it not clear, then, that the prolixity of literature, the "exuberant verbosity," and the worthlessness and rubbish character, of which Monier Williams so much complains, are more to be found in his own camp of modern civilisation than in the natural, simple, and

invigorating writings of the authors of the Upanishats, the Upavedas and the Darshanas. To prove this, let me quote herefrom the well known Upaveda Sushruta on medical science

मूत्रादि द्रव्यसु मुख वीर्य विपाक दीप धातु
सहाय्य सन्नसिरा प्रायुर्भक्ष्यस्निग्धमसम्भवद्रव्यसम्
हविमायास्तथा प्रवृत्तगन्धोदरसत्रयविनियय भग्न
विकसपा साध्यप्यवत्वस्येयता च विकाराणामिव
सादयवान् विवेका सहस्रगो ये विधित्यमाना
विमल विपुल बुद्धेरपि बुद्धिमातु ली कुर्यु किं पुनर
क्षुपबुद्ध तस्मादवश्यमनुपदपादयोगाध्यात्मसमुप
यितव्यमनुयातव्यश्च ॥ अध्याय ४ ॥

The meaning of which is that the various physiological subjects, called *dravya rasa, guna, virya* &c., &c. are subjects, which sometimes even puzzle the most clear headed intellect. Let every student of medical science then, apply his *buddhi* (Intellect) in comprehending these principles and let him reflect. There is no need of multiplying quotations, for it cannot be doubted that the Upanishats, the Niruktas, the Upavedas and the Darshanas are all addressed to the intellect, and the complaint is that they often puzzle the most clear-headed intellect and not that they cannot be remembered. It is clear then that the condensed literature of Sanskrit, the Sūtras, are not due to reaction and that they are

not a liar or restorative, to the ear, but rather appeal to the intellect or the faculties of understanding.

Professor Williams now passes from this, which is a pure digression from the subject, to the proper subject. Only once before the treatment of the subject, like an impartial writer, he inculcates the duty of studying fairly & without prejudice the other religions of the world. That his fairness and freedom from prejudice may not be ill judged, I again quote from the fair and unprejudiced Christian, Professor Monier Williams.

"For may it not be maintained, that the traces of the original truth imparted to mankind should be diligently sought for in every religious system, however corrupt, so that when any fragment of the living rock is discovered, it may at once be converted into a fulcrum for the up-heaving of the whole mass of surrounding error? At all events, it may reasonably be conceded that if nothing true or sound can be shown to underlie the *rotten tissue* of decaying religious systems, the truth of Christianity may at least in this manner be more clearly exhibited and its value by contrast made more conspicuous.

Leaving Monier Williams with his hopes regarding the not decaying but living Christianity aside for the moment we come now to the proper subject. Professor Williams confesses that "the idea of a revelation, though apparently never entertained in a definite manner by the Greeks and Romans, is perfectly familiar to the Hindus." But the Vedas are not a revelation in the sense in which the

Bible is so to the Christian or the Quran to the Moslem.

The Quran is "a single volume manifestly the work of one author descended entire from heaven in the night called *al fady* in the month of Ramazan." "The Old Testament was furnished with its accompaniments of Chaldean translations and paraphrases called Targums," But "the word Veda," says Professor Williams, "means knowledge; and is a term applied to Divine *unwritten* knowledge, imagined to have issued like breath from the Self-existent, and communicated to no single person, but to a whole class of men called Rishis or inspired sages. By them the divine knowledge thus apprehended was transmitted, not in writing but through the ear by constant oral repetition, through a succession of teacher who claimed as Brahmins to be its rightful recipient. . . . Moreover when at last, by its continued growth, it became too complex for mere oral transmission, then this Veda resolved itself not into one single volume, like the Quran, but into a whole series of compositions, which had in reality been composed by a number of different poets and writers at different times during several centuries.

Monier Williams herein asserts :

I That the Vedas are really unwritten knowledge issuing like breath from the Self-existent.

II. That they were communicated to a whole class of men called Rishis or inspired sages

III. That they continued to grow hence their present written book form.

IV. That the Vedas are a series of compositions by a number of different poets and writers at different times during several centuries

We will take Professor William's propositions one by one His first proposition is that the Vedas are really unwritten *knowledge* issuing like breath from the Self-existent Now, does Professor Williams imagine that there can ever be anything like a written knowledge? Be it here clearly understood that I am not here speaking of the knowledge being written down, but of written knowledge Professor Williams seems to imagine that the Vedas are laboring under a very serious defect The Christians, he seems to think, have a definite revelation, as it is put down in black and white, and so have the Mahomedans, for, their book descended from heaven in its present form He therefore imagines that the Christians have a settled revelation, a something definite to lay their hands upon as their sacred books, but the Veda being unwritten knowledge is not tangible, is not a reality or a something definite In this he is entirely wrong, and if not wrong he very sadly betrays a want of philosophical culture For, Vedas being *unwritten* knowledge, let me ask, Can there be anything which can with philosophical precision be called written knowledge? Let us be clear on the subject A revelation is a revelation in so far as it is revealed to somebody The Bible is alleged to be a revelation, it was therefore revealed to somebody A revelation is only a revelation

in so far as it is revealed to the intellect, *is* in so far as the person to whom it is revealed, becomes directly conscious of the facts revealed. Admitting then, that the Bible is a revelation, and that there was somebody to whom it was revealed, that somebody must have been conscious of the contents of this revelation. Is this his consciousness of the facts revealed, in any way distinct from the knowledge of the facts revealed? If not, then the Bible is a knowledge and, in so far as it lay in the consciousness of the person to whom it was revealed which is true revelation, it was unwritten knowledge. Thus, then, the Bible revelation is also an unwritten knowledge, and Professor Williams cannot in any way free himself from the dilemma that either Bible revelation itself is an unwritten knowledge and in that case does not differ in any way from the Revelation of the Vedas which is also unwritten knowledge, or that the Bible is a mere record not felt in consciousness but made to descend just as Quran descended to Mahomed, Mahomed himself being illiterate not understanding it but only being specially directed and empowered by God to commit it to writing for the spread of faith. In this case the Bible is no more a revelation. It is a mere dead-letter book sent miraculously through some people who themselves did not understand it. Can Professor Williams get rid of this difficulty? The fact is that he wants to sing praises of popular dogmatic Christianity and afraid lest he should be called a heretic, condescends to let the Bible rot into a mere dead letter book, rather than accept

a position which should make him be considered a heretic. Whether it is more philosophical to believe that God sent a sealed book which descended entire, or that God only reveals to the understanding of some who thus illuminated record down what they are revealed to, is for you to judge. So far with respect to the first part of the 1st proposition asserted by Professor Williams.

We now come to the 2nd part. This refers to the mode of revelation of the Vedas or the origin of the Vedas. He says

"There are numerous inconsistencies in the accounts of the production of the Veda . . . 1 One account makes it issue from the Self-existent like breath, by the power of *adrishṭa*, without any deliberation or thought on his part, 2 another makes the four Vedas issue from Brahman like smoke from burning fuel, 3 another educes them from the elements, 4 another from Gayatri, 5 a hymn in the Atharva Veda educes them from *kāla* or Time (XIX 54) 6 The Shatapatha Brahman asserts that the creator brooded over the three worlds and thence produced three lights, the fire, the air and the sun, from which respectively were extracted the Rīg, Yajur and Sam Veda. Manu (I 23) affirms the same 7 In the Puruṣa Sukta, the three Vedas are derived from the mystical victim Puruṣa 8 Lastly, by the Mīmāṃsaka, the Veda is declared to be itself an eternal sound and to have existed absolutely from all eternity, quite independently of any utterer of its text. Hence it is often called

अथ वा "what is heard," &c. In opposition to all this, we have the *ṛishis* themselves frequently insisted, that the *mantras* were composed by themselves."

In this little paragraph Professor Williams points out that there are nine different conflicting theories maintained with respect to the production of the Vedas, and enumerates the nine theories and thinks that he has done enough to demolish the ground of Vedic revelation. But he is sadly mistaken. He simply betrays the woful depth of his ignorance of even the ordinary Sanskrit words, not to speak of the higher Sanskrit literature. The fact is that not only are there no nine conflicting hypotheses, but that these are one and the same hypothesis invariably maintained by each and all of the ancient Vedic writers. The one unitary conception concerning the production of the Vedas is that the Vedas are a spontaneous emanation from the deity an involuntary natural & original procession of God's innate wisdom and knowledge principles into this world. It is this one uniform idea which is maintained throughout. Let us take each one of the theories enumerated by Professor Williams.

The Vedas issued from the Self-existent like breath
Says the Śhristapatha, Xand 14. Adhyaya 5—

एव वा योऽस्य महतो मूलस्य निष्प्रसृतमित्यह
गुहो यजुर्वेद सामवेदो इयवागिरस रात्र्यादि ।—

The meaning is that Yajñavalkya replies to Maitreyi in answer to her question,—“O Maitreyi

कालादृचः समभवन यजुः कालादजायत

which Monier Williams translates as if meaning that Rig and Yajur Vedis have been produced by Time *kal* Here again, our learned Boden Professors of Sanskrit & world-renowned Oriental scholar does not understand the meaning of the word *Kal* Says the Nighantu, Chap II, Kanda 14,

कालयति गति कर्मा तस्मात् कालः—

which means that the spirit that is intelligent and pervades all, is called *kala*, or ,

कलयति सखयति सर्वान् पदार्थान् स कालः—

that Infinite Being, in whose comparison all that exists is measurable, is called *kala* Kala, therefore, is the name of the same Infinite Being, the same God Gayatri or Brahma or Swayambhu from whom the Vedis have been described to proceed in the first four accounts given of it

We come now to the sixth No mistake can be more serious on the part of Monier Williams than the one he has committed in rendering the Shatpatha Brahmana's account of the origin of the Vedas According to this account, the Creator brooded over the three worlds and thence produced three lights, fire, the air, and the sun, from which respectively were extracted the Rig, Yajur and Sama Veda Here also Williams' mistake lies in substituting English words for Sanskrit ones William's own translation only with the modification of putting the original Sanskrit words for which he has put the

For when we see God, the One or Brahman, as it is, we see it and know it, and then we are in the light. Now we are in a darkness, but that is not because we are in the spiritual state or in the physical condition, and we are not in the state of ignorance, but we are in the state of ignorance. The meaning of the passage is that God is the beginning of the world, and that which created the world of three worlds by the power of Agni, Vayu and Ra. To show this, the Agni, Vayu and Ra are in the spiritual condition, and the three worlds of Agni, Vayu and Ra are in the physical condition. You know, light, heat, and electricity are the three worlds, and they are the three worlds of Agni, Vayu and Ra.

पश्चिमापुरविध्यसु चतुर्ष्वपि ब्रह्मनामम् ।

दुदोह पश्चिमापुरविध्यसु चतुर्ष्वपि ब्रह्मनामम् ॥

This means that the three Vedas, Rig, Yajur and Sama were revealed to the three Rishis, Agni, Vayu and Ra, to give a knowledge of how to accomplish the purpose of life in this world.

We come now to the 7th account in Parashara Sutra, where, according to Master Wilkins, the Vedas are derived from the mystical name Parashara. Here quote the Master of the Parashara Sutra —

तस्माद्यज्ञात्सर्वहुत ऋचः सामानि जज्ञिरे

चन्दाष्मि जज्ञिरे तस्माद्यजुस्तस्मादजायत ॥

The plain meaning of which is that Rig, Yajuh, Sama, and Chhândas or Atharva Veda have proceeded from that Purusha who is Yajna and Sarvahuta. Williams renders it into the mystical victim, Purusha. But he is in the wrong. Purusha is the Universal Spirit that pervades all nature. Says Nirukta, II, 1 5 —

पुरुषः पुरिषादः पुरिग्रयः पूरयतेर्वा

पूरयत्यन्तरित्यन्तरपुरुषमभिप्रेत्य ॥

यस्मात्परं नापरमस्ति किञ्चिद्

यस्मान्नाणीयो न जग्रायोऽस्ति किञ्चित् ।

वृक्ष इव स्तब्धो दिवि तिष्ठत्येकस्

तेनेदं पूर्णं पुरुषेण सर्वम् ॥

इत्यपि निगमो भवति ॥

the meaning of which is that God is called Purusha, because he is *purishadya*, that is, he pervades the universe and even lives in the interior of the human soul. It is in this sense that the mantra of the Veda is revealed, saying there is nothing superior to God, nothing separate from him, nothing more refined, nothing more extended. He holds all but is himself unmoved. He is the only one. Yes, he, even he, is the spirit that

permeates all. It is clear then that Purusha means the Universal Spirit of God. We come now to the second word *Tishat*. Says *Vishva*, III. 4. 1—

यस्य कप्पात प्रथमात यप्रतिकर्मेति नक्ष्त्रा
याचक्षरो भवतीति वा यप्रुक्ष्वो भवतीति वा
यदक्षिणाग्निम इत्योपमन्वयो यप्रुपरिम नयन्तीति ।

The meaning is this. Why is *yajna* the name of God ? Because He is the prime mover of all the forces of nature ; because He is the only being to be worshipped and because to Him all the Vedic mantras point out. The meaning then, of the passage of Purusha is as quoted by Williams is this : From that God who is called Purusha, & the Universal Spirit, and who is a so called *Yajna* for reasons given above have proceeded the Rig Yaj Brama and Atharvan.

Especially the Mimamsakas declare the Vedas to be eternal and independently existent, a view which does not at all conflict with the former one.

And lastly says Williams, "We have the Rishis themselves frequently intimating that the mantras were composed by themselves etc." In these days of spiritualism no wonder if the spirits of the Rishis might have appeared before Monier Williams and mytically whispered into his ears the composition of the Vedas by themselves. But in so far as the writings of the Rishis themselves go not only is the assertion of Williams merely false and

baseless but positively injurious and very perverted. For, the Rishis themselves declare themselves to be not at all the authors of the Vedas. The Vedas are regarded by all of them as *apauruṣeya*, i. e., not the production of human beings. I will quote here Nirukta I 6 5 —

साक्षात् कृतधर्माण ऋषयो बभूवुस्तेऽवरिभ्योऽ

साक्षात् कृतधर्मभ्य उपदेशेन संश्रान्तः संप्रादुः

Also, Nirukta II 3 2

ऋषिर्दर्शनात् स्तोमान् ददर्शेत्यौपमन्य-

वस्तव्यदेतास्तपस्यमानान् ब्रह्म स्वर्ग-

भ्यनर्षस्तदृषोणामृषित्वमिति विज्ञायते ॥

The meaning of these is that Rishis were those people who had realised the truths in the mantras and having done so began to enlighten those of their fellow-brethren who were ignorant of the truths in the same. Further on, says Aupamanyava, the rishis are only the *seers* of the mantras, but not the composers.

We have now shortly dismissed with the first proposition of Williams and partly with the second. The assertion of Williams that the mantras of the Vedas were composed by a whole class of men called Rishis is entirely baseless. Not only were they not composed by the whole class, but not even by one individual of that class. The reason why Williams regards this to be so, is that every mantra of the Vedas gives four things, its Chhanda,

Swara, Devata and Rishi. The name of the who only indicates the man who for the first time taught the meanings of that mantras to the world at large.

The third proposition of Williams is that the Vedas continued to grow till they became so bulky that their division into the present four volumes became necessary. Here again Monier Williams betrays his ignorance of Sanskrit. For the four-fold classification of the Vedas which according to Williams is due to the accretion of compositional matter and not to any systematic and logical principle. I refer the reader to what I wrote in the Terminology of the Vedas —

"The word *rig* signifies the expression of the nature and proper uses of, and the actions and re-actions produced by substances, Hence the name has been applied to Rig Veda as its function is to describe the physical, chemical and active properties of all material substances as well as the psychological properties of all mental substances. Next to a knowledge of things, comes the practical application of that knowledge, for all knowledge has some end, that end being usefulness to man. Hence Yajur Veda comes next to Rig Veda the meaning of Yajur being application. It is upon this double principle of liberal and professional or technical education that the well-known division of the course of study of Aryans, the Vedas, into Rig and Yajur is based.

After a knowledge of the universe and the practice of that knowledge comes the elevation and exaltation of

human faculties, which alone is compatible with the true Upana of Brahman. The Sama Veda has, for its function, the expression of those mantras which lead to this exaltation of mind, in which one enters in the superior condition and becomes illuminated.

Let us not mock at the position taken by the Aryas with respect to the nature of the Vedas, for there are reasons enough to justify this position. Not being a novel position at all, it is the position that is maintained even according to the Hindu systems of mythology which are but gross corrupt distortions of the Vedic sense and meaning. The broad and universal distinction of all training into professional and liberal, has been altogether lost sight of in the Puranic mythology, and like everything else has been contracted into a narrow-superstitious sphere of shallow thought. The Vedas, instead of being regarded as universal text books of liberal and professional sciences, are now regarded as simply codes of religious thought. Religion, instead of being grasped as the guiding principle of all active propensities of human nature, is regarded as an equivalent of certain creeds and dogmas. So with the Rig and Yajur Vedas. Yet, even in this distorted remnant of Aryan thought and wisdom, the Puranic mythology, the division of the Vedas into Rig and Yajur, the liberal & the professional, is faithfully preserved. The *rig*, now, implies a collection of hymns and songs in praise and *description* of various gods and goddesses, whereas Yajuh, now, stands for the

mantras recited in the ritual, the active part of religious ceremonies. This is the view taken by the so-called scholars of the day.

We come now to Williams' account of the Vedas. He says that the Vedas consist of 3 parts. I Mantra II Brahmanas and III Upanishads. We will not dwell here upon the fact that the mantras only are the Vedas and not the Brahmanas and the Upanishads, for the Brahmanas and the Upanishads are mere commentaries of the Vedas. He says—

"They (the mantra portion of the Ved according to Williams) are comprised in 5 principal Samhitas or collections of Mantras, called respectively Rig Atharva, Sama Taitreya and Vajasaneya.

In the collection we have two assertions of Williams:—

I That Samhita means a collection of Mantras.

II That there are five such collections, Rig Atharva, Sama, Taitreya and Vajasaneya.

The Samhita should mean a collection. Is another indication of Williams' ignorance of Sanskrit Grammar. Says Panini I 4 107 *ṣ* 4 *saṃhitāśah Saṃhitā* which means that the *new* *first* of one *pad* with another is called Samhita. To make the distinction clear I will refer the reader not to Panini but to Oriental scholars themselves. Recently there have been published two editions of Rig Veda I Samhita Patha and 2 Pad Patha. Both are collections of Mantras, but not Samhitas. Now

did Sanhita mean collection of Mantras, Max Muller would not have unconsciously refuted himself and his brother scholar Monier Williams

His second assertion is with respect to the number of the Vedas. Vajrasaneyā Sanhita is just what is known by the name of Yajur Veda, whereas Taitreya Sanhita is no Mantra Sanhita but Brahman Sanhita. Could Williams, unless he had a willingness to distort Sanskrit words and literature and a conscious desire to misrepresent & maliciously misreport every Vedic truth, have even committed a greater blunder than this? We are ever reading of Veda trays and Veda chalushtays; but no one, not even Williams himself, has even heard or read of Veda Panchakam. The fact is that the reticence or abettment of other scholars has made Williams too bold, & there is not one lie regarding Sanskrit literature that his omnipotent secret pen cannot convert into an *authoritative truth* for the blind followers of the blind. Having defined the Vedas as prayer, incantations and hymns, Williams then proceeds to the discussion of another question. I shall state it in his own words.

"To what deities it will be asked, were the prayers and hymns of these collections addressed? This is an interesting inquiry for these were probably the very deities worshipped under similar names by our Aryas prior to their primal home, somewhere on the table-land of Central Asia, perhaps in the region of Bactria, not far from the sources of the Oxus. The answer is. They worshipped those physical forces

before which all nations, if guided solely by the light of nature, have in the early period of their life instinctively bowed down and before which even the more civilized and enlightened have always been compelled to bend in awe and reverence, if not in adoration.

LECTURE II

THE HYMNS OF THE VEDAS.

I come now to Monier Williams' criticism on the Vedas proper. Here is what Monier Williams has to say on the subject.

In the Veda this unity soon diverged into various ramifications. Only a few of the hymns appear to contain the simple conception of one divine self-existent omnipresent Being, and even in these the idea of one God present in all nature is somewhat nebulous and undefined. Perhaps the most ancient and beautiful deification was that of Dyaus, 'the sky' as Dyaus-pitar 'Heavenly Father' (the Zeus or Jupiter of the Greeks and Romans). Then, closely connected with Dyaus, was a goddess A-diti, the Infinite Expansion, conceived of subsequently as the mother of all the gods. Next came a development of the same conception called Varuna, 'the Investing Sky' said to answer to Ahura

Next came a development of the same conception called Varuna, 'the Investing Sky' said to answer to Ahura

Note—The Author's criticism is misleading. However Williams is entirely wrong in assuming that the Vedas forbade idolatrous worship. Swami Dayanand Saraswati has satisfactorily refuted the assertion of the Europeans in his Introduction to the Vedas.—Ed

Mazda, the Ormazd of the ancient Persian (Zand) mythology, and to the Greek *Oupavos*—but a more spiritual conception, leading to a worship which rose to the nature of a belief in the great ° ° ° This Varuna, again, was soon thought of in connection with another somewhat vague personification called Mitra, 'god of day' After a time these impersonations of the sky and celestial sphere were felt to be too vague. Soon, therefore, the great investing firmament resolved itself into separate cosmical entities with separate powers and attributes. First, the watery atmosphere—personified under the name of Indra, ever seeking to dispense his dewy treasures (*indu*), though ever restrained, secondly, the wind—thought of either as a single personalty named Vayu, or as a whole assemblage of moving powers coming from every quarter of the compass, and impersonated as Maruts or 'Storm gods.' At the same time in this process of decentralization—if I may use the term—the once purely celestial Varuna became relegated to a position among seven secondary deities of the heavenly sphere called Adityas (afterwards increased to twelve, and regarded as diversified forms of the sun in the several months of the year), and subsequently to a dominion over the water when they had left the air and rested on the earth.

"Of these separately defined physical forces by far the most favourite object of adoration was the deity supposed to yield the dew and rain, longed for by Eastern cultivators of the soil with even greater crav-

together by northern agriculturists. Indra, therefore—the Jupiter Marsus of early Indian mythology—is undoubtedly the principal deity of Vedic worshippers in so far at least as the greater number of their prayers and hymns are addressed to him.

What however could rain effect without the aid of heat? A force the intensity of which must have impressed an Indian mind with awe and led him to invest the possessor of it with divine attributes. Hence the other great god of Vedic worshippers, and in some respects the most important in his connection with sacrificial rites, *Agni* (*Latun Agni*) the god of Fire & Heat, the sun (Greek *heios*) who was probably at first adored as the original source of heat, came to be regarded as only another form of Fire. He was merely a manifestation of the same divine energy removed to the heavens, and consequently less visible. Another deity *Usha*, 'goddess of the dawn'—the *Aurora* of the Greeks,—was naturally connected with the sun and regarded as daughter of the sky. Two other deities, the *Ashvins*, were believed as connected with *Usha*, as older young and handsome traveling in a golden car and precursors of the dawn. They are sometimes called *Nasatyas*, a divine physicians Destroyers of disease—sometimes *Nasatyas*, as 'never untrue'. They appear to have been personifications of two luminous points or rays imagined to precede the break of day. These with Yama, the god of departed spirits, are the principal deities of the Mantra portion of the Veda.

Herein there are 13 points that Monier Williams brings in & also exactly 13 points that can be disputed Williams points out that the Vedas sanction the worship of—

1 Dyauh-pitar, is the father of the sky, which Dyauh-pitar among the Greeks or Romans becomes Zeus or Jupiter

2 Aditi, the goddess of infinite expanse, mother of all gods

3 Varuna, the god of investing sky, corresponding to Ahurmuza of Persians and Oze and Goe of the Greeks

4 Mitra, the god of day, associate of Varuna

5 Indra, the god of the watery atmosphere

6 Vritra, the spirit of evil that opposed Indra

7 Vayu, the god of wind

8 Marutah, the storm-gods

9 Adityas, who were first regarded as seven in number The number was finally increased to 12 The worship of the sun and 12 solar months being thus established

10 Agni, the god of fire

11 Ushah, the goddess of dawn

12 Ashwin, the twin precursors of dawn, called also Daxas or doctors and Nasatjas or never untrue

13 Yama, the god of departed spirits

Each one of these positions can be disputed, but I have neither time enough nor Williams' provocation to do so It would take us a long time to run over the list of these 13 gods and show that Williams has not understood any one of these But it would be useless, as

Williams only quotes the Vedas on the subject of only seven out of these thirteen—Varuh, Nil, Indri, Aditya, Agni, Varun and Yama, and is no less on Time and Ratri or Night, and leaves the remaining out of the 13 undiscussed.

In a future lecture we shall take up each of these quotations in turn and show the strength of the proof on which Williams bases the truth of his assertions. But at present I have neither time nor space nor the disposition to perform this task. As another and more important question I press—Suffice it to say that in the opinion of Monsieur Williams the Vedas are records of rude and barbarous and even fetich worship practised, when the various objects and forces of nature like the sky the firmament the various parts of the day the watery atmosphere, the cloud, the wind, the storm, the rain the sun with all its months, the fire the dawn, the day break and the spirits of the dead were worshipped. Of course Monsieur Williams asserts that the deified forces adored in the mantras, were probably not represented by images or idols in the Vedic period but he says that doubtless the early worshippers clothed their gods with human form in their imaginations. Williams panegyric, then, on the non idolatrous character of the Vedas is a mere panegyric and no more. His object is, however to show that notwithstanding all allowances that can be made the Vedas are at the best, books that contain fetich worship and low uncivilized theology. For let me remind you of the question that I read in the beginning. He says—

"In the Veda, this unity soon diverged into various ramifications. Only a few of the hymns appear to contain the simple conception of one divine self-existent omnipresent Being and even in these the idea of one God present in all nature is somewhat nebulous & undefined "

May object to day is simply to point out that nowhere can these remarks of Williams be so well applicable as in the case of the Bible, the Bible which Monier Williams holds in such esteem, the Bible which he calls the sacred word of God, teaching the only true religion, as opposed to the three false religions of the world,—Brahmanism, Islam and Buddhism, whereas the Vedas do not only in a few passages contain the simple conception of a divine self-existent omnipresent Being, but throughout the Vedas we find God described as a divine self-existent and omnipresent Being, and not only is this idea not cloudy or nebulous and undefined even in these passages, but there can possibly be no clearer statements of the subject than those contained in the Vedas

I sha'll show that the Vedas only sanction pure undefined monotheism, whereas the Bible is the book wherein the idea of one divine, self-existent, omnipresent God is most nebulous and extremely undefined

To come to the Vedas

तमोशान जगतस्तस्युपस्यति
 धियं जित्वमवसे ह्रमहे ययं ॥
 पपा नो यथा वेदसामसहृधे

रचिता पायुरद्वयं स्मृतये ॥

ऋ० १५ ६ य० १५ म० ५ ॥

the meaning of which is—We worship Him the Lord of the universe of the inanimate and the animate creation, for He is the bleaser of our intellect and our protector. He dispenses life and good among all. Him do we worship, for as He is our preserver and benefactor so is He our way to bliss and happiness also.

Again—

तद्विष्णोः परमं पदं सदा यमग्रन्ति मूरयः ।

दिवीयं यद्युगततम ॥ ऋ० १५ २ य० ७ म० ५ ॥

The wise people always desire to obtain communion with Him who pervades everywhere for He is everywhere. Neither time nor space, nor substance can divide Him. He is not limited to one time or one place or one thing but is everywhere just as the light of the sun pervades everywhere in unobstructed space.

Again—

परोत्स्य मनानि परोत्स्य लोकान्

परोत्स्य सर्वां पुदिमो दिव्यम् ।

उपस्थाय प्रथमजामृतस्यात मना

पात मामममिषं विवेय ॥ य० १२ । ११ ॥

God pervades through all matter and space, even the distant suns, the far off directions and is consciously

present everywhere. He is even conscious of His own powers. He made the elemental atoms with which to begin the creation of the Universe. He is all-bliss and eternal happiness. Any human soul that perceives and realises the existence of this divine Being within himself and lives ever in the presence of his God, is saved.

वृक्षस्य स्तम्भः परितः इव आस्थाः ॥

अथर्व० को० १० प्रपा० २३ अनु० ४ मं ३८ ॥

Brahma who is the greatest of all and worthy of being revered by all, who is present in all the worlds, and fit to be worshipped, whose wisdom & knowledge are boundless, who is even the support of the infinite space, in whom all reside and are supported, as a tree resides in the seed and is supported by it, so is the world supported by Him.

न द्वितीयो न तृतीयश्चतुर्थो नाप्युच्यते ॥

न पञ्चमो न षष्ठः सप्तमो नाप्युच्यते ॥

नाष्टमो न नवमो दशमो नाप्युच्यते ॥

तस्मिन् निगता सहस्रं स एष एक एक वृक्षेक एव ॥

सर्वे अस्मिन् देवा एक वृत्ती भवन्ति ॥

अ० को० १३ अ० ४ मं १६—२१ ॥

He is only one, there is no second, no third no fourth God. There is no fifth no sixth, no seventh God. Yes, there is no eighth, nor ninth, nor tenth God. In Him the Unitary Being all else move and have their being.

You have seen then, what the religion of the Vedas is. Can there be any better clearer more distinct expression of monotheism than this? Can we better assert the divinity and omnipresence of God?

We come now to the Bible, the pet darling of Monier Williams, the Christians rock of ages, the Bible to prove the excellence of which Monier Williams so misinterprets, distorts and misuses the Vedas.

Bishop Watson in his letter to Thomas Paine said "An honest man, sincere in his endeavours to search out truth in reading the Bible would examine first whether the bible attributed to the Supreme Being any attribute repugnant to holiness, truth, justice goodness, whether it represented him as subject to human infirmities,"—
B. Watson, p. 114

I would follow the same course... We find that the Bible does represent God as subject to human infirmities and that it does attribute to him attributes repugnant to holiness, truth, justice and goodness.

It represents God as subject to human infirmities. It represents him as having a body subject to wants and weaknesses like those of ourselves. When he appears to Abraham he appears, according to the Bible, as three angels. Then they talk to Abraham &c.

LECTURE IV.

In this lecture, I propose to deal with the 50th Sukt of the first *Ashtaka* of the Rigveda, whose translation as well as remarks thereupon by Monier Williams, I subjoin herewith. Says Monier Williams —

“The next deity is Surya, the sun,^o who, with reference to the variety of his functions, has various names—such as Savitri, Aryaman, Mitra, Varuna, Pushan, sometime ranking as distinct deities of the celestial sphere. As already explained, he is associated in the minds of Vedic worshippers with fire, and is frequently described as sitting in a chariot drawn by seven ruddy horses (representing the seven days of the week), preceded by the Dawn. Here is an example of a hymn (Rigveda I, 50) addressed to this deity, translated almost literally —

Behold the *rays of dawn* like heralds, lead on high
The Sun, that men may see the great all knowing God
The stars sink off like *thickets* in company with Night,
Before the all seeing eye, whose beams reveal his
presence,

Gleaming like brilliant flames, to nation after nation
With speed, beyond the ken of mortals thou, O Sun,
Dost ever travel on, conspicuous to all
Thou dost create the light, and with it dost illumine

* Yaska makes Indra, Agni and Surya the Vedic Triad of gods,

The universe entire thou dost see in the night

Of all the race of men, and all the host of bea-
 Light giving Varuna! thy piercing glance doth scan
 In quick succession all this stirring active world,
 And penetrateth to the broad ether's space

Measuring our days and nights and springing out all
 creatures.

Surya, with flaming locks, a crimson sighted god of day

Thy seven ruddy mares bear on thy shining car
 With these thy self-yoked steeds seven daughters of thy
 chariot,

Onward thou dost advance To thy resplendent orb
 Beyond this lower gloom and upward to the light.

Would we asread O Sun thou god among the gods.
 In this paragraph Monier Williams asserts—

(i) That Surya, the sun, was worshipped as a deity
 under different names Savitri, Aryaman, Mitra, Varuna
 and Pushan.

(ii) That in the minds of Vedic worshippers Surya
 was associated with Fire

(iii) That Surya is described as sitting in a chariot
 drawn by seven ruddy horses preceded by the Dawn

(iv) That these ruddy horses represent the seven,
 days of the week

(v) Monier Williams subjoins an almost literal
 translation of the 50th Sukta of the 1st Ashtaka of the
 Rigveda, which has been mentioned before

I need not say that Pushan, Varuna, Mitra, Aryaman
 and Savitri are other names of the same Surya and that

Agnī is also another name for it, but unlike Williams they are not the different names under which Surya or rather the God of the universe *jagatastasthushah*, that is the Universal Spirit that prevades the whole animate and inanimate creation

The *sapta harita* are not the seven ruddy horses of the sun that pull his chariot, nor has the sun any chariot *Sapta harita* are the seven rays as shall appear further in The *ratha* means this sublime universe The seven days of the week are not the seven *haritas* °

* The MS is missing

REV T WILLIAMS (CRITICISM)

On Klyuga

Says a writer — To ascertain what a person's character is, inquire of him concerning the God in which he has faith—and his reply—if legitimately and honestly stated—will be a disclosure of his own disposition and spiritual or intellectual growth.

This proposition is perfectly true. The whole experience of men and nations justifies it and the Bible of the Christians is also a proof of it. God made man in his own image says the Bible (Genesis 1:26). Therefore man as an image reveals the nature of God or man is in his own notion just what his God is. Or perhaps, it is more true to say that man makes God after his own image. Even in this case one's God is a true index of his character and intellectual worth. Though a truth as our guide we wish to examine T. Williams's character and worth—this article as a critic of Dayananda. For as it is invariably true that "it is a giddy head that thinks that the world turns round," can it not be that what Mr. T. Williams stands himself accused of is exactly what he charges Dayananda with? The fact is that T. Williams has the good fortune of wearing the spectacles of Christian prejudice and to him just as to a jaundiced eye every thing appears tinged with the colour of his spectacles. T. Williams in his article appended herewith charges Dayananda with:—

1. Having scant respect for the Vedas.
2. Preaching the *extremely grossly immoral and unchristian* doctrine of Niyoga.

3 Having the unenviable distinction of so fathering the doctrine on the Rig Veda

4 With telling a lie, gross lie, a deliberate lie, terrible lie, and with scandalously falsifying the Vedas

5 With idiocy

6 With being a dangerous enemy of the Vedas of his times, and lastly T Williams, with a truly Christian spirit, absorbed at the pulpits, damns Dayananda and his doctrine

In this article I shall make no distinction between "Lord" as occurring in the Old Testament and Christ. For, the "Lord" of the Old Testament is Jehovah or God, whereas the world renowned (because of its pre-eminent intelligibility) doctrine of Trinity will have that God the Father (Jehovah), God the Son (Christ) & God the Holy Ghost (the Lord) are one and the same. I will, therefor, substitute for the word "Lord" in the Testament the word Christ, to give it a pleasant, modern Christian garb. And now to proceed with the subject I shall show that what T Williams accuse Dayananda of, if the Bible be true, is what Christ (Jehovah or Lord) stands accused of.

T Williams accuses Swami Dayananda, firstly, of having scant respect for the Vedas

Now to quote Paul (1 Cor 7, 12) "But to the rest speak I, *not the Lord*" Again (2 Cor 11, 17) "That which I speak, I speak it *not after the Lord*, but as it were fool-

17. In the confidence of boasting He remembered that Paul is a inspired personage and Paul's inspiration which men & Christ's thoughts, led him to say that what he is inspired of (a portion of the Bible) is after the Lord but *synth* and *re-imposed*. Therefore God or Christ stands accused of his logomachy respect for the Bible for he declares that the Bible is not inspired.

Secondly T. Williams accuses Samuel Dayanards of preaching the astounding grossly immoral, and moon-strook doctrine of *Niroga*. We quote from Deuteronomy XXV 5-12. — If brethren dwell together and one of them die and his wife be childless the wife or the dead shall not marry without unto a stranger her husband's brother shall go in unto her and take her to him to wife and perform the duty of his brother unto her and it shall be that the first born which she beareth shall succeed in the name of his brother which is dead, that his name be not put out of Israel. And if the man like not to take his brother's wife then let his brother's wife go up to the gate unto the elders, and say my husband's brother's sister-in-law to raise up unto his brother a name in Israel. If he will not perform the duty of my husband's brother Then the elders of the city shall call him and speak unto him; and if he stand to it, and say I like not to take her; then shall his brother's wife come unto him, in the presence of the elders, and loose his shoe from off his foot and spit in his face and shall answer and say so shall it be done unto that man that he will not build up his brother's house—and his name shall be called in Israel

the house of him that has his shoe loosed " This is clearly *Niyoga*, and so Christ stands accused of preaching the astounding, grossly immoral, and monstrous doctrine of *Niyoga* And thirdly and consequently, Christ stands accused of having the unenviable distinction of having fathered this doctrine upon the Bible

Fourthly, T. Williams accuses Dayananda of telling lie, a deliberate lie, and a scandalous falsification

Now I Kings 22, 28 "And there came forth a spirit, and stood before the lord and said, I will persuade him And the Lord said unto him, wherewith? And he said, I will go forth, and I will be a lying spirit in the mouth of all his prophets And he said thou sha't persuade him, and prevail also go forth, and do so Now, therefore, behold, the Lord hath put a lying spirit in the mouth of all these, thy prophets, and the Lord hath spoken evil concerning thee " Again (2 Thes 2 11) "and for this cause, God shall send them strong delusion, that shall believe a lie "

Does not the Christian God here stand accused of putting lie in the mouth of his prophets, of deluding people by a lie, "a gross lie, a deliberate lie, a terrible lie, and a scandalous falsification?"

Fifthly, T. Williams charges Swami Dayananda with idiocy "Idiocy," says Webster, "is a defect in understanding " To show that Christ or God suffered from this defect we turn to Gen 1 30, where it reads —"And God saw everything that he had made and behold it was very good " Here to God's understanding everything

he had made appeared very good. Again in the 6th Chapter and sixth verse of the same book, we read "And it repented the Lord that he made man on the earth and it grieved him at his heart." From the above it is clear that it proved to God's defective understanding that he had cherished fallacious hopes of his creation being very good, on the contrary it turned out a source of repentance and grief to him. Is not this defective understanding idiocy? God or Christ, therefore stands accused of idiocy with which T Williams charges Swami Dayananda.

We have shown how Christ declares the Bible to be uninspired, and, therefore, declares himself also a dangerous enemy of his Bible. It is no wonder then that T Williams should charge Swami Dayananda with being a dangerous enemy of the Vedas of his times.

And lastly T Williams, with a truly Christian spirit, throws his Missionary weapons against Swami Dayananda, whom he presents as exposed to a damning charge. This is no more unlike T Williams God than the former charges were. The Bible represents God or Christ as cursing and as dooming to pain and agony to servitude and death whole races of his creatures, throughout all ages for the sin of one individual. It represents him as cursing all serpents, making them cursed above all cattle, dooming them to go on their belly and eat dust, as putting enmity in men's hearts towards them because one solitary serpent tempted E. a. It represents him as dooming all women as cursing the earth for the sin of one man.

cursing it to bring forth thorns and thistles to annoy all future generations, dooming all mankind throughout all lands and throughout all ages to eat of the ground in sorrow all the days of their life, to eat the herb of the field, to eat their bread with the sweat of their brow, and lastly, to return to the dust. The thought is appalling. Countless millions mercilessly doomed to daily and hopeless misery for sins committed before any of them were born, as if this blasphemy were not enough."

One word before we come to the proper subject. Let T Williams always remember what his Bible teaches. He lone should throw arrows at his brother who is himself innocent. Mr Williams, you should first clear the Bible of its disgusting absurdities and monstrosities, its evil and pernicious doctrines, thus rendering yourself and your God innocent, before you raise your head to attack the doctrines of the Vedas, which, Biblically circumstanced as you are, notwithstanding your twenty years' patient study of Sanskrit, you are as unable to grasp as the little Grammar school-boy, his dusty Greek or Hebrew. And now to the subject.

Speaking of Rig, 10 10 10, the authority adduced by Swami, the Rev Missionary says "Are you not aware, Sir, that in what Dayananda quotes from Rig Veda 10 10 10, *the speaker is a brother and the woman he speaks to is that brother's sister* !!! The speaker is Yama and the woman he speaks to is Yami, aye, not only his sister, but his *twin* sister." It needed a special revelation in the nineteenth century on the Missionary *elite*, T Williams, to know

that Yama and Yami were twin brother and sister. The proof of this revealed text of T. Williams' inspiration we will learn by and by but the sinister motive in his insisting upon this personal revelation is obvious and it is purely Christian. Like a serpent under the rose he throws his flattering flowery scorners among the self-deluded Hindus, to exasperate them against the Aryas by joining in a common cause pretending to show that since the mantra means Yami asking her brother Yama's hand and Yama refusing it, the Vedas do not sanction *Aryas*. This is all pretence, the hidden innuendo is that there were ancient Aryans the revered and sacred forefathers of the Hindus, the great olden Vedic Rishis, among whom even such depravity prevailed that a sister dared ask her twin brother's sacred *vidhi* hand. In the light of present criticism such hypocrisy shall no longer last, and no more will T. Williams arrogate the position which belongs to God alone. Here is T. Williams' arrogant blasphemy — "I say I with all positiveness that Dayananda knew that it was Yama that speaks and that he speaks to his twin sister Yami. How terrible then is the lie that he is guilty of. Poor Williams, is not your positiveness the most terrible lie that you are guilty of terrible because you lie against a person, whose staunch moral character even outdoes your Ideal Christ? (Vide Theosophist on the subject.)

As a proof of his assertion, T. Williams quotes *Nirukta* 6.5.5 and forgetting the original, falls upon a spurious commentary but rising from his sleep comes to *Nirukta*

11-13 and quoting Nir "Yamī Yamam chakame tam pieratya chakshu," which means, according to T Williams, Yamī desired sexual intercourse with Yama, he refused her " Where is T Williams's positive assertion that Yama and Yamī are brother and sister? Poor Williams can only reply, Yaska's commentator says expressly that Yama was Yamī's brother But as T Williams says, "an author is not bound by what his commentator might say, Yaska's commentator shares a remorseless fate Admitted that the Nirukta of Yaska is a *Vedāṅga*, and has full Vedic authority, we trust no one will be so mad as to believe, like Mr T Williams, that Niruka being a *Vedāṅga* its commentary too is a *Vedāṅga* Impotent Christian logic '1

He comes now to Katyaṇa, whose words are, "vaivāsvatayor yama—yam yoh samvadah" Now learned T Williams, the infallible authority on Sanskrit, translates *Vaivasvatayor* into son and daughter of Vaivasvat and thus infallibly proves that the hymn is a conversation between twin brother and sister But says Nirukta, 7-26, "Vaivasvata adityad vīrasanyan prerat vata praga-tadīa," which means that Vīrasvat is the sun Again in Nirukta, 12-10, we read 'Adityad Yman mithunaw janayam chakar," and in 12 11 we read, "ratrī radityaya adit yodayeantardhijate," which means, wherever Yama Yamī, the couple, are mentioned in connection with Vaivasvat, the sun, the meaning of the allegory cleared is, that the night or gloom disappears on the rise of the sun Has this any thing to do with Yamī and Yama, the

twelve and a half the rest of the world. Almost
 is nothing. There is in this allegory no trace of Yami
 holding the hand of Yama, or the reverse. But Katsurana,
 whose authority need not be forced upon us, simply
 means that Yama meaning a person desirous of continu-
 ing the control of his person and Yami a similar woman,
 the hymn in an allegorical conversation, describes the
 duty of each male and female person.

T Williams comes thirdly to the instances themselves.
 He is very proud of counting Yama and Yami six times and
 three times each proper names and his proofs of these
 as proper names are curious. His first proof is that in
 the 13th verse Yama occurs in the vocative case and
 Yami in the fourteenth verse in the same case. Is not
 T Williams ashamed of his logic, after he has read our
 criticism on his last article on the identity of the Vedas?
 We quote from Solomon's song 13. 16 "Awake O north
 wind and come thou south." Here wind is in the voca-
 tive case. Will T Williams' Biblical logic believe that
 "wind" is a proper name? Again we quote from the
 book of the prophet Isaiah, 1. 2, "Hear O, hea-
 ven and give ear O earth. Are "heaven" and "earth" proper
 names? Again Isaiah 4, 12 13, "O ye travelling com-
 panies, is "companies" a proper name? T Williams
 has, perhaps, learnt his Bible and grammar in a Mission
 School only or he would not have fallen upon such ad-
 mirable logic which shines out off the Bible.

T Williams now discovers the relationship of his
 vocative case proper names." He says, that Yama

calls Yami his kinswoman "śalakṣmī" Does "śalakṣmī" mean kinswoman or "of similar virtues?"

"Further on," Williams says, "in the fourth verse, Yama says that Gandhary and his watery wife were their source—*nabhi*, and that their relationship was consanguinous—*Jami*" Watery wives a Biblical imagination only can conceive, and the husband of such a watery wife, Gandhary must be residing in tracts of waters mid navel people unknown to ancient Aryans, the inhabitants of the *land* of Arya Varta. T Williams has not even that grain of human dignity and pride which keeps a man consistent. Are Yama and Yami the son and daughter of Vaisvasat or of Gandhary and his watery wife? T Williams should have answered this question to himself before rushing into print. Again says he, "in the 8th verse, Yami that Twashtri formed them as husband and wife, *dampati*, in the womb" This, instead of proving Yama and Yami as twins, proves them as husband and wife, if we are to accept the historical phraseology, by legal contract or mere ceremony, but they were very much naturally inclined by disposition & constitution towards this relation. This alone can be the reasonable meaning of Twashtri forming them as husband and wife in the womb. Otherwise, are we to think that wise T Williams is piling objections upon dejections unwittingly against his position? Or, if T Williams be right, might we not question which of the three alternatives is true? Were Yama and Yami born of Vaisvasat, or of Gandhary and his watery wife of Twashtri in *his* womb?

Again quoting 9th verse, says T Williams "that in heaven and earth panes," with me, I have not observed

erred. Here again, how does T. Williams connect it with "mithuna" which means pastime or sport? Does the fact of the parts being related prove that the terms are related?

T. Williams' conclusion on the tenth verse is no better.

Yatra Janayabharanagami which means, the children become with the child by the marriage relation, is translated by our Sanhit scholar of twenty years standing into "hereafter blood relations will do what is unbecoming their blood relationship." At this stage comes Swami's question *karuna bhaga* where Yama says, "Desire another husband if you will." We may leave this as the relation of brother and sister which T. Williams wants to establish between Yama and Yam. But already by his own translations, I am proved to be false.

Now Sir if after this, any one can say as to the correctness of Dayananda's translation why that man is so idiot. I have shown that this dialogical dialogue is not between twins and that Swami's translation is right. It is the tenth verse quoted by Swami that T. Williams criticises and translates falsely so as to show that a woman should not, if her husband be impotent, betake herself to some other married man. Dayananda's scholar T. Williams, calls himself a scholar of twenty years standing! I am quite prepared to subscribe to this, that having proved T. Williams and his God guilty of deliberately telling lies and of having scant respect for the Bible thus charging the Divinity with grossly immoral attributes, T. Williams is undoubtedly the most dangerous enemy of the Bible of his track. The Vedas, however are beyond such juvenile attacks.

T. WILLIAMS' LETTER
To the Editor of the *Arya Patrika*
About NIYOGA

— o —

DEAR MR EDITOR,—Permit me herewith to redeem the promise I made you, printed June 18th, of giving "another instance of Dayananda's scant respect for the book that he proclaims as superior to any other "

In the Satyarth Praksha, (my copy was printed 1894) on page 118, Dayananda puts the question —Does Niyoga take place even when the husband is living, as well as when he is dead?" The answer he gives himself is —"It takes place even when he is living " Now we know what Dayananda means by Niyoga It is that when a couple (man and wife) has no children then the non impotent party (were the wife) may co habit with certain others of the opposite sex for the sake of obtaining children

In the preceding part of the Chapter he teaches what a wife should do when her husband dies Advancing from this he here shows what a wife should do even when the husband is living but impotent He starts the astounding doctrine *that the wife of a childless man while that man is yet alive may betake herself to some other married man in order to have a child by him* Support for this monstrous doctrine he pretends to find, not in Manu as before, but, strange to say, in the Rig Veda, and quotes *part* of the 10th verso of the 10th hymn of the 10th mandala, as the grand authority, and the only authority for it

¹ Now I do not mean to say that there is no indecency in the Rig Veda, for there is as I can show, but it was left for

Dayananda, the founder of the Arya Samaj) to show that the Rig Veda actually teaches the grossly immoral doctrine that women shall be sold to other married men for gratification if he can command the impotent. I do not mean to say either that the Hindus have the doctrine for the first time from the Dayanandists, for it is notorious that at various periods of practice the thing has been done by the Hindus for centuries. Use is made in this way of the Pandya Brahmins at Alathalad, and it is to the credit of thing that has brought such till to the Mahajans of the Vallabharharya sect, and attaches such an ill character to the Jains marriage system. But what I was always to think that I have reason for thinking that this monstrous doctrine has now for the first time in the history of the Hindus, been fathered upon the Rig Veda, and that the venerable distortion of so I thinking it belongs to Dayananda, the founder of the Arya Samaj).

But, Sir, the enormity of this distortion becomes a thousand times stronger when it is discovered that it is all of the Veda, Sir to say that the Rig Veda teaches & enforces the doctrine is a gross lie. What can any man think of Dayananda who has such an instance of malicious falsification of the Rig Veda,—the book he pretends to regard as a divine revelation and yet of which he is so callously in the wrong.

Are you not aware Sir that in what Dayananda quotes from the Rig Veda the speaker is a brother and the woman he speaks to is that brother's sister!!! The speaker is Yama and the woman he speaks to is his daughter — nay not only his daughter but sister as well.

What wonder that upto this time no Hindu was ever so mad as to father such a doctrine upon the Rig Veda, for every Hindu who knew the Veda at all, knew that it is Yama that speaks and that he speaks to his twin sister Yami. Dayananda translates it, saying that the speaker is a husband and the woman he speaks to the speaker's wife. Now here he *deliberately lies*. I say it with all positiveness that Dayananda knew that it was Yama that speaks and that he speaks to his twin sister Yami. How terrible then is the lie that he is guilty of !!!—terrible, because he deliberately lies against a book he professes to believe in as, and proclaims to be, a divine revelation.

The only way for the Dayanandis to escape from this damning charge is to show that it is not Yama that speaks and that the woman he speaks to is not Yami his twin sister. But how vain any such contradiction must be I will show conclusively. For—

(1) A part from the hymn itself the earliest authority capable of being adduced is Yaska. He in Nir. 6, 5, 4 quotes the 13th verse of this same hymn and his commentator begins his comment by saying, "Yami speaks to Yama," &c., &c. But lest any one say that an author is not bound by what his commentator might say, I hasten to give Yaska's own words. When explaining in Nir. 11, 3, 13, the 14th verse of this evening hymn Rig 10. 10, he himself says "Yami Yamam chakame tam pratyachachiksha" which means that "Yami desired sexual intercourse with Yama." He refused her. Now surely this is plain enough for it is evident that Yaska and his commentator regard the verses they quote as

part of a dialogue between Yama and Yami to which Yami desires cohabitation with Yama, but that Yama refuses. What has this to do with an impotent husband bidding his wife go to another married man for cohabitation !! Yama's commentator says expressly that Yama was Yami's brother. It is needless to remind you, Sir, that this Nirukta of Yaska is Vedaanga and therefore has full Vedic authority. How dare Dayananda go directly to the teeth of Yaska whom he professes to altogether respect and say that here we have the case of an impotent husband !!

(X) My next authority is even scarcely inferior to Yaska; it is Kaṭyayana. His *sarvaśraṅkramanīya* of the R̥g Veda, giving the R̥khi and Devata &c. of every hymn of that Veda is the great authority for those matters and is respected by all. He, Kaṭyayana, too is the author of the *Śrauta sūtras* of the Bṛhaspati's Brahmana of the Yajur Veda and so. Grammar is second not even to Pāṇini and the *Mahābhāṣya* of Patañjali is engaged chiefly in illustrating Kaṭyayana's *varṭikas* on Pāṇini's Grammar. As to the overwhelming character therefore of Kaṭyayana's authority in all matters such as we are discussing, there can be no question. Now in his *sarvaśraṅkramanīya*, he says that there is no R̥khi or Devata of this hymn P̥igveda 10, 19 but he says that the hymn is a dialogue between Yama and Yami now and daughter of Valmaśat. His words are "Valmaśat- Yama Yami yeh samvadah. Now Sir apart from the hymn itself I would be impossible to bring anybody whose authority even in any respect anywhere approach that of either of these. But now I turn to the hymn itself.

FRAGMENT

The following is subjoined to the Criticism to some portion of which it belongs. The whole of the Criticism was not prepared by the late Pt Guru Datta, M A for the press. It was in the lecture notes. Hence it is very defective.

I shall now proceed with my explanation of each one of the Mantras giving Monier William's translation of the same, so that both might appear side by side in a position not to be compared

the Divine essentials within the very interior of every living soul

Compare with the above Monier William's translation of the same (3rd) mantra Says he —

“(The sun) whose beams reveal his presence,

Gleaming like brilliant flames, to nation after nation”

In vain do we seek for that purity of meaning, that sublimity of thought, that absorbing importance of the subject of matter, in Williams' translation of the Mantra *yanam omu* to William's scholarly mind, means 'nation after nation'. The Ketaveh and Agnyah become beams, 'brilliant flames'. In vain do the philologists of the West try to distort the sense of Vedic Mantras, and to make it correspond with the records of a primitive, comparatively savage and mythological ages. I say, in vain, do these so called scholars of oriental language, try to interpret the Vedic records according to the light of their brain bread, I mean, fancy bread science, 'philology'. For, all philologies, scholarships and learning melt away like ice before the concentrated penetrative, heat-pouring potent beams of truth.

We come now to the 5th Mantra of this Sukt, with Monier William's characteristic translation — “Thou (the sun) risest in the sight of all the race of men, and all the host of heaven”. Can Williams ever be said to understand the meanings of Vedic Mantras, or specifically, say of this Mantra? Where is his conception of Vedic mythologies? Where is his keen Christian sense which smells of element-worship in the Vedas? Has it gone so wrong as to incapacitate him even from understanding the simplest things? The sun never rises at once in the sight of all the race of men; but poor ignorant superstitious Vedic worshippers might have imagined so, but can even an idiot a Zulu savage, that has not even the millionth part of the experience that Williams has — can he, even he imagine the sun to rise in the sight of all the host of Heaven — he means the starry firmament

went. Not Expressing a like group of a savage the one simply birds. So all the way to a starry host of the Hien va. It simply shines the night and, the stars into the powder of whiteness and of light. But it never rises in the sight of all the stars of Hien va. For as it rises the stars are blinded and sink into a system. Whence come, the stars? Take the white water? (The water has stepped?) or by the stars? William's answer is that the stars are the stars of Heaven. He has forgotten a translation of the words of the gods and deities. But here deities means all the host of Hien va. Master Williams' summary further slips the words of the mantra *pratyakṣa vidyāmanā*. It seems that the Vedic poet had put this venerable phrase here only to keep up the poetical metre! But another explanation is possible. Williams was so much occupied with all the host of Heaven that as the sun rises, with the host of Heaven, departed his memory of this phrase also. Hence the answer in his text, there.

1. *pratyakṣa* It is God in the course of this panorama of the universe. It is not like the worship of Him who is doubtless there in us as well as in the material objects of attraction. It is not like actually seeing in the interior of everything and being praying. You are the most fit object of our worship. In worshipping Him we do not worship a mere phantasm-pictura, we do not worship a distant being or existence but the ever present, manifest living God. It is no worship of Christ, one, who, if Bible goes by true, lived and died some 1000 years ago, who is now no more among us who lived in Judea and Jerusalem not in India or America, who lived among the Hebrews, not among the Aryas and the American Indians, and in spite of all this, who only lived, but does not live as he did once in human form, in flesh and blood. Christ-days are gone, but God-days are ever alive. Compared with the pure and sublime faith of the Vedas, which is also the faith of the Aryas compared with the worship of the Hindu divinity in no Christianity is but a very crude form of idolatry. Farther more the Vedic *pratyakṣa* divinity worship with its solemn words and sacred congregation, is a far pleader of stanzas and "hymns of fruitful prayer" but in the Hindu temple of human heart, a worship which consists only in the realisation on earth and in reality of that *Unme and Brahman* that reigns calm every where, *aham brahma*

POSTSCRIPT

o

The reader is presented with a pocket edition of the works of the late Pt. Garu Datta, M A Originally they were printed in separate pamphlets at prices which deterred poor people from buying them Now they are put in a small volume at a very low price to enable the people to enjoy the pleasure of reading them

A short sketch of his life is prefixed, which in separate form costs much

The Mundak Upanishat has been left out, as it could not be translated by him, being then laid up with a disease that ultimately carried him off

The latter portion of this book is fragmentary, for it was not intended for the press, being in complete

One essay here omitted is pointed out as written by him for a club It is in loose and puerile style, denying the existence of God

As said in his life, he did not care to write a book He was persuaded to start a Vedic Magazine, which could be issued three months only, when he expired, and these works are reprints from them

The reader will come to know that the Māndukya Upanishat is the master piece, and next to it is the Evidence of the Human Spirit

Though the right is vested in my press, yet these writings originally collected by me have been printed by others for trade But the present is the cheapest volume that can be carried in a pocket
